You can add to that the new CEPT/UK CB Channels that start at 27.60125
through 29.99125, at 4 Watts FM.

But you are *assuming* that "interference" is occurring, aren't you?
And nobody but you and Aanal Aaron are making any noise about things,
so you will continue to be ignored. By the FCC as well as by the bulk
of the CBers.

Try http://ah0a.org for Morse Academy. This is a DOS based program that will not run on the new Gil Bates Windows version but does on the older ones. Infinitely adjustable, I use it to learn to copy on a keyboard which I never learned to do. Came out of the military but was used by everyone with good success.

Bert, WA2SI, likes the ARRL cd at http://www.arrl.org. If you have a receiver, you might want to try the W1AW code practice transmissions to get a feel for copying off the air.

Use the e-mail (he he) if you want to kick the bull in the butt some more.

Dick, November Zero Beer Keg

I don't know what you are talking about 6 months bull. I was treated for cancer the day after it was discovered. When I was diagnosed as a T-1 diabetic I was in the training class in 2 weeks and when I broke my hand at work I was treated including surgery immediately and non of it has cost me a penny including my insulin. All paid for. I have never seen our dollar worth 50 cents. We do keep our dollar artificially low. I don't mind I make $40,000.00 per year working 25 hours a week in a grocery store. Then why are all of your rich US actors moving to Canada and buying up condos in my neighborhood? And if you are looking for the largest oil reserve in the world, larger then all the oil in the middle east then you should be looking too Canada. 25% of all the gas in your car comes from us. You should be ashamed Doc.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Well let's see George, were your family
members forced to do menial labor? Were
your family members forced to work in fields,
forcibly moved from their home, killed innocently,
etc etc, and you think that's funny shit? No wonder
you have no sense of reality.

No, I am not assuming. All I have to do is listen to 28.085 any day of the
week and hear truckers
with their asinine beeping and squeaking. Their very presence is
interference. What you don't know is I am NOT the only one complaining.
And you don't know whether FCC ignores anyone
or not. We shall see what takes place in the coming months.

Let's not. Dukes are so over run on reruns it's pathetic.
TNN had them on awhile back and had a damn marathon even.
It was interesting to see how many times they used the same story line over
and over.

Kevin, just a quick thought. On any antenna (whether full quarter wave whip or a shortened vertical), the maximum radiation occurs. A bumper mount will put that maximum radiation into the metal of the vehicle. My guess (and it is a guess - hopefully we can get some honest input from a few folks) is that a longer antenna will raise that up higher and put more radiation away from the metal of the vehicle and you may not experience as many problems. That said, be sure and verify that bumper is well bonded to the frame of the vehicle; perhaps some copper braid right from the mounting point taken back and securely mounted to the frame will help; possibly not, but you might try something as stupid simple as using a set of jumper cables clipped right onto the bumper next to the mount point and run under the vehicle straight towards the far end and clamped to the frame. Just to see if it makes a difference in the swr. It costs nothing and might point you towards a possible cure. Ain't antennas wonderful ;)

73 from Rochester, NY
Jim
ps - you might try shaking the antenna a bit and see if the swr changes; if so, suspect a bad solder joint and/or bad ground.

A glance at the different mobile antennas for sale results in extreme buying confusion.
First and foremost, the mounting location is the most important aspect to performance.
You must get as much of the antenna over the top of the vehicle as you can.
Roof mounting is most desirable, followed by trunk deck / hood mounting then lastly bumper mounting
Most of us do not have room to use a 102" whip on our vehicle. Plenty of manufactures
make a shortened antenna for our use. How do they do that? Simple, somewhere on the
antenna (the base, center, top or entire antenna) they wind a coil to compensate for the
length that they are shortening the antenna from 102". So if your mobile antenna is 54
inches, the manufacture has made a coil to compensate for the 48" inches they are short
from 102" (102 - 54 = 48). When a coil is added to an antenna it does three things. One,
it cuts down on the antenna's efficiency. Second, it cuts down on the bandwidth.
Third it cuts down the antennas impedance (it lowers it even more than 40 Ohms).
The shorter the antenna is made, the more these three factors are reduced.
How many of you change the length of your coax to tune your antenna?
One of my good friends said to me, "I think changing the length of the coax is the same as moving the gamma rod adjustment on my Moonraker 4".
Sorry to say, this is not true. As most people will find, varying the length of coax
to the antenna will vary the SWR that the SWR meter is reporting. Actually, SWR
should remain relatively constant no matter how long the coax is or where it is
placed on the line (if its 5 feet down the coax from the radio or 50 feet down the
coax from the radio). In most cases, the cause of inconsistant SWR meter readings
is from poor SWR meter design or component aging / failure. For the SWR meter to
read consistant SWR readings on the coax, the meter has to have an impedance
itself of exactly 50 Ohms. Any deviation of the SWR meter's self impedance (from 50 Ohms)
from poor design or component aging / error / failure will cause slightly

inconsistant SWR readings when the SWR meters position on the coax or length
of the coax is varied. In practice, generally you will find varying the coax length
seemingly effects the SWR reading. Most SWR meters (built into radio and external
type meters) and impedance "humps" in coax lines and connectors will cause minor
variations in SWR as jumpers and coax length are varied. In reality, the mismatch at
the antenna's feedpoint / coax junction is unchanged. Therefore - the actual SWR is
unchanged.

Another reason SWR could vary is from the situation where the coax is acting as
part of the antenna. Not a favorable or normal situation. The signal is traveling back
down the outside of the of the coax braid (note power should only be traveling
on the inside on the coax braid). Therefore, the coax is part of antenna system and
changing the coax length will change the SWR. This situation is more likely to
occur in mobile installations. You can try to eliminate this situation
(called "Common mode currents") by winding an "RF Choke".
Wind about 6ft of RG-213 or RG-8 into a coil (6 to 8 turns). For RG-58 use 4ft
with 6 to 8 turns. Wind the coax up, placing each turn right next to one another.
Use electrical tape to secure turns together. You should place these as close
to the antenna as possible. Right at the antenna coax connection point being
optimum. Most times, you can verify that you have common mode currents flowing
back down the coax by grabbing hold of the coax while transmitting and moving
the coax around. You can watch the SWR waver by moving the coax while
transmitting (don't speak into mic!). You have to do this with all the doors
closed from inside the vehicle. SWR should waver, if you notice that SWR jumps
rapidily between two values, you might have a intermitant (bad) connection in the
connectors (PL-259s) on the coax. In most cases of "common mode currents", just
grabbing the coax will cause the SWR to change.

The "RF choke" described above stops the signal from traveling back down the
outside of the coax. The signal inside the coax is * u n a f f e c t e d *

by the
choke (contrary to what you may have heard about coiling up excess coax).
Common mode current kills antenna efficieny. You could have a decent SWR
and not realize half your signal is being broadcast into you car (result
very
poor antenna performance). If your linear amplifier causes serious problems
with your car's computer, lights, etc....you may have common mode currents.
If moving the coax around the vehicle results in SWR change, this is a good
indicator you have common mode currents flowing back down the coax line.

This doesn't happen often with base station antennas. Most base antennas
have
some type of device that will decouple the antenna from the feedline
(gamma match, balun, etc.). Make sure you run your feedling (coax)
straight down from the antenna, taking care not to run close to antenna
to prevent "common mode" currents which could still occur if coax is
oriented
in a way to pick up strong antenna signal.

Coax Length Issues Simplified

Question: What is the "correct" length of coax?
Answer: The shortest length that makes it from the radio to the antenna.

Question: Are there any exceptions to the above rule?
Answer: 75 Ohm harnesses for Co-phasing is the only exception.

Question: Why do most mobile antenna makers recommend 18 feet of coax?
Answer: You got me, they claim you should use 1/2 wavelength multiples of
coax.
18 feet isn't even close to being a 1/2 wavelength in any 50 Ohm coax you
will find.
Check some commonly used coax using the above formulas. RG-58, the most
commonly
used mobile antenna coax length would have to be 12 feet to be a 1/2
wavelength
. RG-8X would need to be 14 feet.

Question: Ok, seriously nerd, when I trim my coax it changes my SWR.
You can't tell me it's not good to lower my SWR from 1.5 to 1.2 by taking
off a few extra
feet of coax.
Answer: Hey, I'm not a nerd! Go ahead, change your coax length.
If you change coax length and it affects your SWR in minute amounts,
everything is working fine. If your SWR was 2.5:1 and putting in a 4 foot
jumper
brought it down to 1.3:1, this large change indicates you have real
problems...i.e
common mode currents (see above). Really, you should be changing the
antennas
length to alter SWR. NO special length of 50 ohm coax is going to fix or
lower your

SWR signficantly and/or boost performance. Period.

Question: I notice when I change coax length, my "modulation" needle jumps more / harder / faster when I talk. I get more watts out of the radio (verified by a watt meter)
with certain lengths of coax. Is there a certain length that will allow my radio to put
out the most power?
Answer: No, there isn't a magic certain length that will do this.
Certain lengths of coax will allow your radio to "see" a load that it can couple with
better which results in more power out of the radio / amp. Unfortunately, there isn't a
good way to determine what length you need to allow the radio to put out the max
wattage its capable of. I am only refering to newer solid state radios with transistors.
Old tube radios usaually have devices built into them to tune the radios finals
impedance to match that of the input end of the coax. If you want to accomplish
the same effect with your solid state radio, pick up a device known as a "antenna tuner".
The term antenna tuner is misleading because it doesn't actually tune the antenna -
or take the place of tuning the antenna - it simply lets the radio couple to the
antenna system with better efficiency. Other more appropriate names for the antenna
tuner are the transmatch or feedline flattener. If your SWR is low (below 2:1),
don't expect to notice a (performance) difference from using an antenna tuner.

George,
Thanks for all the information. I will have a handfull of ideas to try tomorrow. I let you all know how it turns out.
Thanks again,
Kevin

Strictly tongue in cheek, but I'd send for some Holy Water as well ... ;)
Seriously, have at it; good luck - but I think you'll get it figured out.
Antennas can be exasperating. They don't call SWR 'swear' for nothing!
BTW, I left out a word or two about the maximum radiation. The maximum
current (and radiation) of a whip is right at the feed point and declines to
a node (zero point) at the unterminated (far) end of the whip. This puts
maximum radiation at the base of the dumb thing - right into your metal
vehicle. This, of course, can cause all kinds of neat things to happen to
your pattern, SWR, and vocabulary as well ;)

73 from Rochester, NY

What the phuqq are you babbling about Landpussy? You are really demented I never once said anything about a sig file yet true to form you make up some bs. LOL What a friggin LOSER!

So please, you have been proven wrong.
I do appreciate the fact that you didn't type some
sort of harassing, sexual innuendo filled post, it may
prove that you can be civil.

> My fav was always the frame-bending 75ft creek jumps that never seemed to
>affect them Duke boys' car. :)

Yeah, I did catch the mismatched paint once. The inside skinny
was that they had like twelve or fifteen "ringers" and only one or
two for the "beauty shots," which were 440 powered. The jumpers
were usually wimpy ol' 318 cars. Usually the "beauty shots" were
better painted. It's a crying shame that so many of those cars were
destroyed to make that show, by doing those 75-foot creek jumps
(and worse).

I'm going to be getting back into CB after being out of the loop for about 20 years. My old rig, along with the truck it was in, is long gone, but it was capable of about ten-to-fifteen mile ranges fairly reliably, sometimes more under good conditions. I'd like to outfit my current truck with a rig capable of similar performance. I'm not worried about skip or linears or any of that - just a solid rig that doesn't cost me my first born. The old truck had an 8' whip what I'd just as soon avoid today. Any suggestions?

Cobra makes a good line of stuff. Nothing gawdy, just gets the job done.
Depends on how many knobs you want as to what you'll pay.
Mileage is still probably the same but with more interference depending on
channel used.
Also look around in wal-mart for some good buys.
I had a GE a few years back that I loved. Had it peaked and tweaked and that
sucker talked.
For antennas, about any decent fiberglass one will work just the same.

The General Lee was a '69 Charger (S/E model). The Charger was
just a Coronet fancied up with some performance goodies. I'm not
much of a Mopar guy, either, but each of the US automakers (AMC
included) used to build some neat stuff in the late sixties and early
seventies. I used to be a hardcore Ford guy, but any more, it's all
about the same to me. Still kind of prefer Fords but GM makes
pretty darned good stuff too.

> I shoulda quit school and became a stunt driver....

Heh. Yeah, me too. "What do you do for a living, Mark?" "You
know all that stuff you're not supposed to do when you're driving?
You know, like getting the car airborn and driving it like you stole
it? Well, that's what I do."

I reckon we're due for the "off topic" admonishment here soon, ya
think?

You know the amazing part is, there's a whole lot of people that love
that show.... I know it was very "unbelievable" at times, but it was
wholesome family entertainment... No Sex, No Violence... except if you
consider a fist fight between, bo and luke, there was no gore and in
the end the good guys always won... alot of that is missing today...
sometime or another do a google search on "the general lee" and see
what comes up... it's AMAZING!

"Just a good ol' boys...never meaning no harm..."

Wait a sec Jim. I thought the maximum radiation of an antenna was at the top two thirds of the antenna. Is this not true? Or does it only apply to certain types of whips?

I went to measure with the SWR today and noticed it's VERY high.....and also inconsistant....on the same channel, within 1 minute it can go from a 1.2 to a 4....the only thing I can think of is that the jumper coax I'm using is 6 or 8 feet long.....I thought maybe if this was moved around it could cause problems or inconsistant readings....are accurate readings produces with a 12" or shorter jumper or does it not matter?

Welcome back...

Unfortunately I have a little bad news for you. We are currently near the top of the second peak of the 11-year solar cycle (though it's on the downfall side now). Unfortunately this means skip is BAD. During the day, you will never get the distance you are looking for because of the skip conditions. Even with a decent setup, you will likely not get more that few miles at best. During the late evening and night (once the skip dies sown), it wouldn't be a problem at all.

As far as antenna, the old saying goes, the longer the better (generally speaking). If you aren't interested in the full 1/4-wave whip like you had before, might I suggest a Wilson 1000, or perhaps a K40. I'd go with the Wilson over the K40, but that's just me. Others will have other suggestions for you I am sure, but I am just recommending what I have used. I've been quite happy with it's performance, so it suites me fine.

Radio... I guess if your looking for a "legal" CB, I would suggest something made by Uniden if you are buying new. If looking for used, then I'd also add in the older models of Cobra radios; just be sure the mike connector is mounted on the SIDE of the radio. The newer units that weren't manufactured for Cobra by Uniden have the mike jacks on the front.

My 2-cents. Take it as you will...

PH

He is right, Dave. The magnetic field is the whole caper, the mag field
depends on current, and the current is highest in the lower part of the
quarter-wave.

Makes one wonder how bumper mounts worked at all. It is also why
center-loaded whips are somewhat more efficient than base loading but take
twice the inductance.

Axl,
It isn't the length of a jumper that's causing
problems, otherwise it would be a constant thing
instead of intermitant. I would suggest it's a
loose connection, possibly a bad PL-259, or even
a 'loose' antenna. 'Wiggle' things and see what
happens, it may be easy to find.

It's all in knowing 'how', Georgie. Some
people do know how to do it, and some people
don't. There's nothing wrong in not knowing
how Georgie, but you shouldn't 'make fun' of
those who do. Instead, why not learn 'how'?
'Doc
PS - Then you could put it on your CD.

George,
No, it doesn't. You have to remember what we're
talking about here, the 'groundplane'. The effectiveness
of the groundplane doesn't change. The effectiveness of
the antenna ~may~ change if the radiation pattern is shifted
in a direction away from the station you want to hear. This
'shift' in radiation pattern is also not as 'big' a deal as
most people think.

Source record: 133170

If your runnin barefoot the coax length is unimportant,however the antenna
should be tuned using a analyzer,when in doubt use 18ft.
You have got a loose ground somewhere causing the fluctuation.
Coaxial lengths cannot change the swr, however they can fool the swr meter
and
make you think the swr changed.
Life is like a box of chocolates,you dont know what youre gonna get.

A Cobra 29ltd will work fine with a Firestik FSII, try to avoid the Wilson
and K40
line. A top-loaded antenna has less attennuation than a center or
base-loaded antenna
and costs 1/3 as much.

You can get a cheap 3 amp power supply from Radio Shack and it will work fine for your CB as long as the power output hasn't been turned up too much. I wouldn't recommend using the mobile antenna inside. Besides performance problems, you have to worry about exposure to RF, plus the increased chance of interference on your electronics. If you insist on using a mobile antenna on your base radio, put it outside with the coax running in through a window or similar opening and make sure the antenna is on something metal, such as a window air conditioner. You'd be better off getting a base antenna.

If you don't want some huge monstrostity bolted to the side of your house, there are plenty of "no ground plane" base antennas, some as small as 3 feet tall. While these are a comprimise as far as performance goes, they will get you on the air while still keeping an asthetically appealing look to your home. I wouldn't expect a range of more than a few miles with an antenna like this on AM on a typical day, but if you work any sideband or when conditions are enhanced during the day, you may work some good distances. One thing that will make a world of difference in your signal is if you can mount your antenna someplace that it is clear all the way around, preferably above your roof level.

My neighbors lovingly refer to my Imax 2000 antenna as my "Rocket Launcher" - I suppose it's because of it's 24 foot height, strapped to the roof of my house, making it almost 45 feet from the ground to the top of the antenna. :)

Here's a "no ground plane" antenna being sold on Ebay right now:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1373762928

He has an Ebay store, so you might be able to find others as well. The one for auction is only 39" long. If you have any local CB shops, they should also be able to help you out with an antenna, although their price will probably be a bit higher than the internet. Hope this helps!

Yes, it was the funniest thing on radio since Stern's early 90's shows
with Billy West. I really thought they would be fired the next day.

>are accurate readings produces with a
>12" or shorter jumper or does it not >matter?
OK here we go again. If you are using CB channels and RG-58 or RG-8X (called mini) coax go with a coax length of about 14.5 ft. That's what will get your coax to about 52 ohms...seems like a familiar number right?
It's also the 1/2 wavelength 714 refers to multiplied by the velocity factor of the coax (or close to it).
Now you have a good piece of coax, solder the PL-259 on the radio end and most antennas use a regular bolt thru connector crimp on (to the wire) connector. Be sure to solder this too. Connect the antenna being sure not to have a short (direct connection between the center and the shield) in the setup. Check the SWR now. If Channel 1's SWR is higher than Channel 40 this means your antenna is too short. Solder a small piece of wire to the end or add a spring. I found some aluminum washers that are 3/8 inch thick that add just a little. Remember it's not just the 3/8 length but the full round of the washer playing in. RF at HF travels on the outside of the conductor. If SWR is higher on Ch 40 than on 1 you need to shorten the length. Snip a 1/4 inch off at a time or if you bought the right antenna you will have an Allen wrench adjuster set screw. Check it again. A NOTE....Be sure to close all vehicle doors when checking SWR. It does come into play! Most people try to get the best SWR reading (lowest) on channel 20 so that you are centered out on the channel range. Good luck....Joe 333 Springfield MO....

Yes here we go again the coax is 50-52 ohms no matter what the length is
jackwad. Another CB Myth is shot down

I'll take your word for it until I get a chance to look up the information myself. I suppose It does make sense though. My knowledge about radio communications is very limited, still learning. Is this similar to why a device that is dependent on an exact voltage will operate more efficiently when the power feed isn't a 300' run? Is this like voltage drop for antennas? Or is it more like: An antenna is a radiating device and as soon as the signal reaches the antenna it begins to radiate and so the majority of the signal is radiated at the bottom as this is where the flow starts?

Dave

Precisely. On a single antenna length has no meaning.
The length myth comes from the fact that manufacturer's make coax, with
connectors, in prefixed lengths of 3' increments.
A 52ohm resistance cable is still 52 ohms regardless of length.
It may drop a little over a mile or so though.

> the coax (or close to it).

Bullshit. What you're referring to is the dialectric constant of the makeup
of the coax itself.
Which aids in determining the actual impedance.
Such as 52ohm or 75 ohm.

The velocity factor is defined as the ratio of the speed of the signal to
travel a certain distance on the cable to the its speed to travel the same
distance in a vacuum. If we define the constant as the speed of the signal
in the vacuum then the velocity factor will be:

http://www.ece.wpi.edu/courses/ee535/hwk97/hwk2cd97/husain/node5.html

http://www.ece.wpi.edu/courses/ee535/hwk97/hwk2cd97/husain/husain.html

The wavelength would be critical if you intend on making a coaxial antenna.
Where each section is tiered onto the next section by alternating the solid
inner conductor, to the outer braided conductor.

Good item for collectors of antiques. According to the regs, those ancient
radios are not to be used.
Although getting caught with one would be as likely as being struck with
lightning.
Try selling it for $10 and you might have a customer somewhere.

I think of it as a subway. When the door opens, it is easy to get on if the train is empty and as it loads you have to stumble over more and more people.

The first electron goes right to the tip of the antenna but starts to repel ones coming later (building a pretty remarkable tip voltage BTW) until it is all the last one can do to get on.

A moving electron, says one James Clerk Maxwell, produces both a static and magnetic field; it is in fact not possible to have one of those items without having the other two. It is really the mag field that does the heavy lifting. The lower end of the antenna just gets more traffic cause it is nearer the door.

The 300 foot run gets into the act as well because an antenna at resonance resolves to a set of series resistances: ground loss, voltage drop (the run problem) in feedlines, etc, and the equivalent radiation resistance of the antenna. So the antenna will radiate RadRes/TotRes and the rest heats the planet.

You pretty well have it figured.

4188. Skippin around

Newsgroup: rec.radio.cb

Whilst cruising about the country side of cincinnati, in the fall, I was checking out the goodies at the local ham fest.
Upon leaving I turned on the old cb and who did I hear banging out a +9 signal? Candy Girl, in Los Angeles.
"Hey candy girl you copy this little old barefoot buckeye mobile?"
Expecting no response of course.
"Yeah, I copy you buckeye mobile. Where you at?"
holy shit. I couldn't believe she actually heard me.
She ran probably one of the top notch stations in the country. Moonraker beams and plenty of power.
She got nailed by uncle charlie several times.

Remember the old "Chips" and "Emergency" Tv shows?
One summer afternoon I've got the police scanner going.
"924"
"924 go ahead."
"924 we have an accident with injuries, fire department dispatched. Galbriath and Pippin Roads.".
"924. Excuse me? I don't believe we have those two roads in this county."
"What county are you in sir?"
"Los Angeles county".
"LA County unit 924 disregard all. This is Hamilton County Ohio."
"924 Hamilton County Ohio clear on all and responding. LA County 924 thanks for the assistance, but we don't need you that bad."

That was all on low band [47mhz] . Shortly after that unit call signs were changed to avoid such things.
And a new tv show was born. 1-adam-12.

Years ago I was part of a search and rescue team in cincinnati.
We had put up at my house a low band (47mhz) base station with 100 watts out and a 110ft antnenna.
One summer afternoon skip was royally bad. I was hearing units from florida to california.
Just to see who was hearing me, as I had several units out that day, I keyed down the mike and gave out the call sign with the location.
"Christ. Did you hear that cincinnati station? He sounded like he's right here in LA."
Got out my call sign book, looked up who was in LA. Schaffer's ambulance service huh?
They supplied the ambulances to the tv shows like chips and that.
So just for kicks I keyed down and called them directly.
Their dispatch answered.
"Attention all stations. Due to the nature of today's weather conditions, it may be difficult for some vehicles to reach their own base stations. If you

can hear any unit having problems, feel free to assist."

After that week, it seemed like everyone, except red cross, went on private line. Just to avoid those problems.

Any other skip stories?

> >
> >http://swap.qth.com/fcc/fcc-cbtable2.htm

Well, I finally figured it out. Aanal Aaron posted this strictly to start another flame war.

First off, it is NOT a FCC Notice; it was a letter sent by the FCC to the US Customs Service. Since it was not sent to Voobie-baby, his posting of it is strictly "hearsay" and should be disregarded as moot.

Secondly, he added his own personal mis-interpretation to it to make certain there would be a flame war, using such phrases as "phoney 10 meter radios" and the like, when there is nothing "phoney" about a ten meter radio and the so-called "export CBs" have never been legal for use in the USA. Again, nothing new or different and, again, moot.

Finally, when several knowledgable people started showing him that he was wrong, he started posting through an anonymous mailserver with the usual sexual innuendo guaranteed to elicit even more flames. This kind of crap is the last resort of a truly deperate and useless human being, and should be ignored as moot.

So, the entire thread is moot. Congrats to The Most Professional TROLL, Aanal Aaron H. Voobner and his followers for a truly collossal waste of space.

PS to Tom: You may never hear back from the FCC on your question (in a pinch, call one of the numbers listed at the bottom of the original letter and talk straight to the men who know the truth), but if you do I hope you'll put it up here in a new thread.

BS. CB power is FOUR watts in AM mode and 12 watts PEP. It was never
reduced to 3.5 watts.

YOU NY Commies don't even KNOW what really happened back then. WE is
in da biggest slave system NOW since ancient Egypt, put here by GOD
because of our SINS. It was SO bad for the southern slave system that
MOST of da BROS STAYED ON the plantation when they were free to go,
because they had such GOOD MASSAS ! How good is da "massa" today? A

lot more WICKED den them palntation owners, thats fow shore! I say
GIVE DEM da reparations, so dey can buy more N8 McVoob LINEARS & CB's
!!
Dave!!!

Yes, Jim, it was a typo. Happens when one gets in a hurry. Should
have read 27.99125. There are 40 new channels available in the UK,
making 80 total. While 40 share the same frequencies as the ones here
in the States all are FM in the UK.

...and continued in a new thread by:

Message 1 in thread From: Alan S. (subnet@hotmail.com)
Subject: Illegal 10 Meter Radios
Newsgroups: rec.radio.cb
Date: 2002-08-15 02:30:41 PST

>First off, it is NOT a FCC Notice; it was a letter sent by the FCC to
>the US Customs Service.
> Since it was not sent to Voobie-baby, his
>posting of it is strictly "hearsay" and should be disregarded as
moot.

A number of people who have been busted by the FCC for selling
non-type-accepted CB radios (like Roper Electronics on June 18th)
probably disregarded it too. In any case, I doubt Roper will be using
your rather "unique" interpretation of the facts as a legal defense.

>Secondly, he added his own personal mis-interpretation to it to make
>certain there would be a flame war, using such phrases as "phoney 10
>meter radios" and the like, when there is nothing "phoney" about a
ten
>meter radio and the so-called "export CBs" have never been legal for
>use in the USA. Again, nothing new or different and, again, moot.

The phrase "10 meter radio" and "amateur radio" has been hijacked by
unscrupulous CB dealers in order to sell CB-type gear that is intended
to be used illegally. For example, a radio featuring a roger beep,
echo, and 6 bands of 40 channels that end at 28.300 mhz is not a
legitimate ham radio or even a "10 meter radio". Hence, they are
phoney 10 meter radios.

Anyone who has been to a truck stop lately or done a search of CB
dealers on the web can easily find out the facts for themselves.

With regard to so-called "export radios", please note that they
typically cover from 25-32 mHz which is not legal for unlicensed CB
use in any country. Since there is no country outside of the USA they
could be legally used on CB in, they are not "export" radios. Hence

their reason for being manufactured is not "export". Since they are illegal for CB use and they are widely sold in truck stops and web sites catering to CB'ers, they are virtually exclusively intended for illegal use.

I urge people to check all facts for themselves, especially the legal ones. Don't rely on anything posted by anyone in a CB newsgroup. It's just common sense.

>Finally, when several knowledgable people started showing him that he
>was wrong, he started posting through an anonymous mailserver with
the
>usual sexual innuendo guaranteed to elicit even more flames. This
kind
>of crap is the last resort of a truly deperate and useless human
>being, and should be ignored as moot.

Since I did not post or send anything through any anonymous server, your latest propaganda is false. As usual.

-Aaron-

4203. CB with SSB

Newsgroup: rec.radio.cb
Date: 2002-08-18 20:18:00 UTC
From: Scott <scott@ovis.net>
Message-ID: <YhT79.72407$983.81388@rwcrnsc53>
Source record: 133233

I would like to hear some options on buying a CB with SSB. I don't really want to get anything like the Ranger or Galaxys with 10 meters. I don't need the extra channels that I am not allowed to use anyways!However I do want echo and talkback along with the ever annoying roger beep. And last but not least it needs to be a real talker! So option anyone? And I do just mean options and not flames and the rest of the dumb shit that goes along with it! Idiots need not reply!!!!!!!!!!!

Thanks, Scott

Sounds more like a bad connector or water in the base of the antenna if a base vertical. On CB the length of coax doesn't make that much of a difference like it would in UHF.

I have an FT817...hf,vhf,uhf all mode with Mahdol antenna set 10-40M and
a brand new MaHa
Battery pack - 2nd battery pack plus the AA battery pack and manual.
I also have the 12V cord and the wall wart charger. Has been modified
for wide band transmit capabilities This unit works
great and looks very nice as well.You want to know more about the radio
specs,do a search..... Best offer

4216. HARADA antenna co. goes BYE BYE!

Newsgroup: rec.radio.cb
Date: 2002-08-18 20:36:31 UTC
From: Dave or Debby <truth@HATEspamplanetc.com>

Source record: 133245

Yep, The aftermarket AM/FM and AM/FM/CB antenna company have quit making replacement antennas and will only make antennas for the car manufacturers instead.

They made motorized AM/FM/ CB antennas for years, as well as non-motorized versions and car AM/FM antennas, which a lot of us CB shops put in for years. I guess the putting on of car antennas by the factory, as compared to the 1970's and after window am/fm antennas which THREW a lot of us into the car antenna installation & sales business, is just about over now. It is SAD to see this happen, because when stock dries up, it is hard to find replacments. Maybe it's another victim of the depression we are in NOW!
Dave!

Coaxial length between a transceiver and antenna are not important,
however using less than 18ft. between a amplifier and antenna can generate
enough rf feedback to possibly cause the transmit side of the amp. to
latch-on.
Be sure to read the fine print this time.
BTW i am no longer reading Dave or Debby mail since they chose to bring
drugs into the NG.............

I have heard a lot of people praising the the Uniden Grant for it's SSB properties,
this may work well with a Astatic mobile-max supplying your r/b and echo.
And a Cobra XL450 with it's class AB1 biasing will make a fine SSB kicker if you so desire,there are several paths you can go by,but their is always time to change the road your on.....

I'm using this antenna
(http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=C
TLG%5F001%5F002%5F004%5F000&product%5Fid=21%2D989)

or go to radioshack.com and type in 21-989 in the search.

It's adjustable, so changing the whip length is easy enough..but when I
first got it, I had my av. swr reading down to like... 1 - 1.2 and I just
checked it out of curiosity 2 days ago and noticed the readings were
generally MUCH higher...I suppose since it's adjustable it may have slipped
length or something...?

The reason I got the antenna I did (see previous post) was because it was magnet mount, fairly tall w/o being TOO obtrusive, and it was easily adjustable w/o cutting....I hear some can be adjusted w/o cutting using an allen wrench...is there a better antenna that meets this criteria I could get?

I think there also may be a lack of places to get them at around here......

Cutting to a certain length does not determine the impedance of
the coax. That is fixed for any length of the coax. Three feet of
RG-58 is 52 ohms as is 10 feet, 10.5 feet or 50 feet.

Geez, you dipstick, don't you know anything?

Those are MAXIMUM possible penalties. A first offense is usually
treated as a misdemeanor. Only REPEATED offenses are ever treated as
felonies.

But don't take my word for it, ask those who have been "visited".
TROLL!

NO! That's 4 watts output in AM mode. Peak effective power has always
been 12 watts (that's sideband for you uneducated ones - and you know
who you are!).

I've got a Galaxy DX959. It's type accepted, no extra channels :) I paid about $160 for it new, but I think they usually retail for around $180. It's got all of the features you listed except for echo. I suppose one could add it without much trouble. Here are my thoughts on the radio:

For as much as people talk these radios up, I'm underwhelmed. Fisrt, I've just replaced it under warranty after having it a mere two weeks. It was horribly misaligned - Waaaay off frequency on LSB, and badly off on USB (TX and RX). AM Modulation out of the box was a mere 50% with a loud whistle. Granted, I didn't check it with a 'scope, only a meter. Still, it was apparent that I didn't have anything to write home about. I finally brought the radio back after the volume pot no longer "clicked" off. I couldn't shut the radio off.

Well, I've got the new one now. All of the shafts on the pots (except for the clarifier) have play in them. Even my old one did this. I don't mean play of the kind that could be fixed by tightening the nut holding the pot to the chassis, either. I mean the shaft rotates a little bit before the wiper in the pot moves. Cheap components I guess. Other than that, the radio works fine.

I do like the large S/RF meter. I have the radio mounted low in my dash near the floor, and the meter is still easy to see. This is definetly the radio for people who like gadgets. It's chock-full of nobs and switches, most of them useless (sure looks neat though). Here's something strange: You can adjust the tone of the RX audio by selecting "hi", "med", or "lo" (I never find the need to touch it). I think a potentiometer would have been a better idea. The "dimmer" control is a pot, not a switch. The radio isn't all that bright in the first place, so I just leave it up all the time. The display doesn't dim slowly as you turn the knob counter-

clockwise, anyway. It stays the same until the knob is fully counter clock-wise. A switch would've been a better idea. The audio amplifier section seems weak, as it saturates very early (about 50% volume). Hey, sometimes I need to hear the thing with my windows rolled down. It's too distorted to be of any use above 75% volume (even with a large external speaker) - and I still can't hear the darn thing.

Some other features:

You can adjust the TX power. Using this, you can lower the TX power to 1 watt. Ummm...OK. That one usually stays put. I originally wrote this off as completely useless feature, but I have now found that it's handy when you're talking to somebody in a nearby vehicle and don't want to bother anybody else on the channel. Why use the power if you don't need it, eh? Anyway...

"Galaxy Noise Filter". Similar to Cobra's SoundTracker, I think. I've read a circuit description of how this thing works. Whatever. I swear, it doesn't sound any different than using a tone control to roll off the high frequencies. It's useless. It muffles the audio so bad, I can't understand a damn thing.

Built-in Frequency Counter. It isn't accurate. I've calibrated it (thanks for the service manual Lou) a few times against an 8 digit 10Hz to 2.4GHz bench counter, and it doesn't remain accurate.

One thing that is pretty neat: You don't have to calibrate the built-in SWR meter. Sure internal SWR meters aren't REALLY accurate anyway, but this one checked close enough compared to my external one. Shoot, as long as my SWR is below 2:1 and the meter shows this semi-accurately, I don't really care. It's handy not having to calibrate the thing. I monitor it from time to time.

All in all, the radio works pretty well. It could be better, it could be worse. Perhaps I'm just to damn picky. Nah, whatever. My Royce 40 Channel sideband rig kicks it's ass :) It just doesn't look as cool mounted in the dash.

-Alan S.

Ever hear of the velocity factor? 18 foot may be a half wave
somewhere near 27 MHz in free space, but not in coax.

This is why the general move for various local services has been higher in frequency (UHF or even above). Still, interesting things happen even on UHF. At various times here in Rochester, NY, a repeater can be heard (and worked) from (geeze, is it Utica or Albany? I'm really getting old and forgetful) ... well, hundreds of miles away. Even with my handheld at ground level, there are times I can get into Canada on 3.5 watts. At 144 MHz, California to Hawaii has been spanned a number of times. Low band VHF (47 MHz) really isn't a whole lot higher than 11 meters. If the skip is really rollin', 47 MHz may well also be rolling. 6 meter amateur opens up worldwide at times during the peak of the sunspot cycle (50 MHz). It will be interesting to see the length of THIS thread!

73 from Rochester, NY

>I've got a Galaxy DX959. It's type accepted, no extra channels :) I paid
>about $160 for it new, but I think they usually retail for around $180.

I'll add my two cents here. I too own the Galaxy DX959 and it worked just fine straight from the box. Perhaps you received a assy. line lemon? I have to go along with a previous poster's recommendation though. You really cant beat a Uniden Grant. I've heard Bert's XL in action and the receive is easily on par with some ham rigs (The real ones, Aaron.) I've heard. So if you can find a Uniden Grant XL, or more likely a LT, grab it. Good luck. Take care and 73.

This seems reasonable enough, but I agree with Dick, N0BK. Even if they are classified as CB's in the FCC's opinion, as long as a licensed ham radio operator can lay his or her hands on it...they can use it on amateur freqs, as long as it meets specs. Hams have always been able to convert CB for use on the 10 meter band. Of course once they did, the transmitter was no longer type certified. Take care and 73.

Hey Richard, normally I would not defend Aaron but he did say "UP TO" which implies he was quoting the maximum. I don't think Aaron was claming it was a felony but just pointing out the penalties *can* be mildly irritating or worse.

Better yet, ask a communications attorney, a federal judge, or an FCC
legal counsel if first offender penalties are a good reason to operate
illegally.

Least reliable would be the word of the offenders themselves, having
already proven themselves dishonest by virtue of their crime.

-Aaron-

Why is it that a linear should be driven with low wattage, as in a dead key of 2 or 3 watts , due to damage to the amp at higher wattage, plus worse sound, but it is ok to have a dead key of 2 watts swing to 35 watts? Just wondering because I honestly don't know. Thanks

> Dave!!!!!!!!!!!!!!!!

It is a damage because the laws are there to protect ALL radio operators.
The fact remains
that it IS illegal to import or market these crappy imitation "10 Meter"
radios, use them on CB,
or operate them on the ham bands without a license...again to protect those
who DO hold the
required license. Dave, you often quote hell-fire, damnation Pentacostal ,
Bible passages. What
happened to "Render unto Ceasar the things that are Ceasar's, and to God,
the things that are
God's"? Hmmmmmm? How can you ignore the laws of the land, while
righteously spouting
Scripture and calling people "communists"? Why is it OK for people to
operate radios on
frequencies they (and you, too) know are illegal and WRONG, and then you
yell "sixth
plank" at anyone who happens to be the victim of such intrusion? Why is it
OK for a Bible-
thumping denizen such as you to promote the breaking of the law while
criticizing anyone who
objects to being interfered with on bands they are licensed for. I hate to
say it, but.....
let me see.....what is that word...it won't come to
me.....hyp.....hypo.....hippopotamus?...
.....no, that isn't it. Hypocrite? YEAH!!!! THAT'S IT! Think about it.

Hello Axl:

I wish I had a Nickel for every antenna that has been fixed by properly soldering the PL-259 connectors, on jumpers or antenna lengths of coax.

It seems that the shield solder connections in the PL-259 connectors are rearly soldered, causing a intermittent connection, causing a intermittent SWR condition.

Suggest you look over the coax PL-259 connectors, and connection to the antenna.

Jay in the Mojave

GOOD question. Most amps take 4 or 5 watts. Forget this SWING
NONSENCE. Swing is what MONKEYS, HIPPIES & evelutionists do. The
WRONG meter "swings." Use an Average power meter (BIRD) and you won't
have to SWING with the IDIOTS !
Dave!!!

Sorry,

Try again. the sale of radios that have no FCc approval is verboten. They
DID get warned. Trust
me, keep your eyes open. There's more in the works for Pilot and Flying J.
Many people ignore
their first or second warnings thinking that FCC cannot do anything or
doesn't have the cajones to
act---(just like Rabbit Ears). What happens in such cases is, they ratchet
up the pressure and impose fines. If that doesn't work, then they take them
to Federal Court. According to Mr. Hol-
lingsworth in a personal phone call with me, this is about to happen. So,
stay tuned.

Those "legal departments" don't have a prayer; the law is clear, and they
won't win. I am sure that
William Flippo, Mr. McCreary, and Randi Owen of Roper Electronics thought
FCC was "winper-
ing", too. You realy ought to stick to something you know.......driving a
truck.

a word used is "saturation" or in laymans term "drive"

there is a min and max to the applied wattage for each amplifier
not enough wattage results in not being able to activate the relay(s)
too much wattage causes the transistors (or tubes) to be overdriven
and dangerous for parts as they will overheat

Well, not if he used the proper radio. I monitor Ch 19 sometimes with my
IC706, but I don't talk there--not even by turning the power down to 4
watts.
I could probably get away with that, but I don't want to risk it. Besides,
once
I find out which lane to get in to get around a wreck, I turn it back to
28.085 to
listen for slims, or some other band. If I had to listen to that racket for
more than
30 minutes, I'd have to pull off and settle my nerves.

And it makes absolutely NO difference how long your coax cable is. If is is kept as short as possible, all connections are intact, and the cable itself is of high quality with no cuts or damage,
you should never worry about coax length. This is not a flame (let's take a time-out from the
10 Meter quarrel), but CBers are mostly the ones that worry about this when it is not of concern
in other services (usually). The only time length counts is in phased systems. You should tune
the ANTENNA, not the cable. Honestly, I can prove, if you will listen to me, that it doesn't matter.
What would you do if you HAD to have your radio in a certain place, and the antenna was 44 feet
away. Really, I'm not kidding--it don't matter!

So what you are telling me is that the max a radio is putting out is the dead key? there is no variation? Is there ever a time that the wattage would be higher than this? and if so why does it not hurt the amp. I am really not trying to act stupid, just trying to understand.

> The length myth comes from the fact that manufacturer's make coax, with
> connectors, in prefixed lengths of 3' increments.
> A 52ohm resistance cable is still 52 ohms regardless of length.
> It may drop a little over a mile or so though.
>

And do you know why the mfrs packed coax in 18 foot lengths--the REAL
reason? Simply because they didn't know how much a user would need, or
where, exactly, the radio would be
installed. The average length on cars of the 50s and 60s to the dash from
the bumper was 18
feet!! That's ALL! Somebody mistakenly picked up on the fact that there is
a coincidental re-
lationship between 18' and wavelength in a 27 MHZ radiating element.
Besides, by adding some
mumbo-jumbo that sounds impressive, a CB shop owner could become an
electronics "hero" to
his customers. And he could teach this worthless theory to his customers
and friends to make them
think they are now an antenna guru, too! It doesn't do any harm, but it
doesn't help anything, either.

The moral of the story is: the correct length of your coax is that length
which enables you to easily

connect your radio to the antenna with a little left over in case you want
to re-arrange your shack!
Just try to keep it as short as possible.
Heehee!

Judas Priest, Twist. This was 1958, the middle of the all time sun spot peak when six was open for days on end worldwide and you could have DXCC in a weekend on 10 with a Zippo. No sane human being with 10 meter privleges would have been caught dead on 11; why do you think it became CB??

> because I honestly don't know. Thanks

Hey, don't feel bad. There are few, and the swingsters aren't among them, who have a clue.

AM is a bitch to amplify decently and tends to be a bit tough on the hardware owing to the steady carrier. And a 100% modulated AM sig has a peak-to-deadkey ratio of 4 to 1. The term 'linear', along a line, simply means that the output looks like the input only bigger. So to properly amplify AM you cannot start with a deadkey greater than 1/4 of the peak capability of the amp. And it does tend to keep the heat within reason as well. Not that big a problem.

Back before I was born and dinosaurs roamed the earth, AM was never run thru linears but was almost always done in the finals, some of which in broadcast got really big with audio amps to match. Some bright soul in the 30s said, "Hey let's cut back on heat by backing off the carrier when things are quiet." And so Controlled Carrier was invented and enjoyed something of a following from the pushers of a certain brand of tube. It actually had more of a following among shortwave broadcasters who needed to keep down the power bill with a transmitter in East Nowhere. It kind of died but was revived in the dying days of AM on the ham bands in the 60s. Its usual purpose was to get a bit more out of some tubes without blowing them up. As you know, transistors are far less forgiving.

This has gotten out of hand with swang. You can do this because you are not doing it long enough to build up the heat that a steady carrier would give you. But the same rules apply about the 4:1 ratio because all swang is is standard AM with the carrier bouncing around with the audio. In your 35 watt example 24 of it is carrier and those who simply take the deadkey from the peak and call it audio are bugling with their tonsils. This is one reason swang generally sounds like dogshit but such exercises as limiter clipping (really, really, dumb) are usually more of a reason.

Incidentally, with AM detectors in a receiver a certain amount of the incoming signal is used to reduce the gain on stronger signals. Swang works by faking this out; listen to the background racket and you will see really quickly that swang is bullshit.

After reading all of the posts I must agree that coax length makes no difference to swr. I think this myth started by CBers trying to be Hams. When feeding an antenna with open wire or 300 ohm TV twin lead as many hams do then the length of feeder plays a roll but not in coax except for line loss. I too heard this myth back in the late 70s when I started in this hobby.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

get used to it, if others can post items for sale...well so can I
Perhaps you perfer the porn spam
or perhaps you just dont have manners?

--
If first you don't succeed, do the same thing again...see what happens

4299. Re: SSB?

For simple reception, a reduced carrier would be sufficient; for independant rigs (can't lock to each other), a simple remedy would be a reasonably accurate master oscillator in the rig (not totally cheap, however). 1 ppm is pretty easy to achieve and would assure both transmitters were within 28 Hz of each other (56 Hz maximum from each other). That would likely allow reasonable independant communications on each sideband IF (BIG if) the transceivers had good sideband supression. Don't expect anything for under $100.00. Don't expect anything decent (even a single band rig) for under a few hundred. Of course, with digital signal processing, we may see DARN good rigs in the near future using phasing techniques that may well be in the $200.00 range. Of course, the whole point is rendered moot if someone is on the channel with an older rig that is a KHz off or so ... not to mention am users. Oh well, it was a pleasant thought for a moment or so ...

> >
> > 18' is 1/2 of a wavelength.....36/2=18
>
> Wouldn't that be 1/8 wave? As 1/4 wave antennas are 37.5 ft long yes?

No, where did you get that from?
37.5 ft is 1/4 wave at around 6.5MHz

The wavelength is equal to the speed of light divided by the frequency...
300,000,000 (metres per second) / 27,000,000 (Hz)
= 300 / 27
= 11.1111 Metres.

There are 3.28 feet in a Metre...
11.1111 x 3.28 = 36' 5"

As someone else pointed out, for coax, you have to take the
velocity factor of that coax into account. That can reduce
a 1/2 wave length to around 12 feet.
But, going back to the original question, coax length is NOT
important. If the length of coax makes a difference to your
reading, there is a problem somewhere that needs to be sorted first.

Regards,

Peter

> to make more sense to simply slide up 5kHz.

Setting the channels 5KHz apart and using one sideband would put all
conversations at equal distances, but the present system does seem to work
well enough for CBers. I cannot see the FCC changing things just to tidy it
up a bit when they will not even drop that crazy DX rule.

> And suppressed does not mean eliminated.

True, but the amount of carrier getting through should be extremely low.
National Semiconductor state a typical figure of 50dB suppression at
10MHz and 65dB at 500KHz carrier frequency.
You have to be within spitting distance to hear it, unless some idiot has
messed with the carrier balance in the radio.

> Even the military does not have that much courage.

Maybe they should recruit more CBers... CBers show no fear.

Yea, though I walk through the valley of knackered radios, I
will fear no splatter: for the "scwerdriver experts guide" art
with me; thy mods and thy stuff they comfort me.

Regards,

Peter.

It honestly looks like a Texas Star (a very old one), however I've never seen this unit before, so who knows... I would have to think that it would have the Texas Star name on it somewhere, but it has BI-LATERAL in the location that most modern TS amps have their name...

Oh well... Maybe someone else can answer your question better...

_______snipped__________
> It is HARD to understand BECAUSE of ALL the LIES going out here.
> Thank GOD there is a few others like me that are into THE TRUTH !
> Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

I disagree. High peak driving power will damage the amplifier transistors
just as easily as the high dead key.

Under high drive conditions(hi peak power) the transistors experience
voltages that can damage the thin layers of semiconductor and insulator
materials inside.

Under hi heat and overdrive conditions the transistors can easily suffer
metal migration which slowly degrades the operation of the transistor.
You'll notice this as a gradual need for higher drive to maintain the usual
output and ultimately the transistor dies.

The notion that hi carrier inputs is the only thing that destroys a
transistor is incorrect. Hi input carriers are only part of the mechanism
which damages the transistors.

A way has been previously described to determine the safe carrier/peak power
inputs to an amp. It requires a setup with variable levels of carrier/peak
power, a amp meter and a wattmeter. Additionally you may want to add a
scope.

Find the 1db compression point of the transistors/amp and limit your peak power to this or less. This usually ensures that a known good amp isn't subject to the perils of overdrive/overheat conditions.

WG,
Is it the 'best' I can do? Not really,
but it's all that's needed.
I know some very nice people in Canada.
I think they would be an asset no matter
where they lived. But, just like in the
USA, there are those who will always be a
'brown spot' no matter where they live.
I also am a firm believer in reality. A
little fantasy is entertaining and in most
cases harmless. Being proud of your country
is a natural human characteristic, and is
also harmless in most cases. The problem is
when a person starts to believe that fantasy
is reality. I think it's time you had your
'meter-stick' measured...

So what is your point, Tim? I can think of several.

1) They do it so I can, too. Seems silly but you have pushed this before.

2) Get off my case 'cause you're making me feel bad.

3) Give a guy a mike and some will act like bozos.

Let us hear the philosophy ring forth.

A DX 600 is a texas star and has 4 2879's and thats all. so it was a pre-667 without the built in driver.

Hey, this one got me to thinking.....hammies more than likley started
encroaching on the cb band ith their hammie radios after 27 was given to
cbers. Wouldn't that make the hammies that drew first blood and broke
fedral law?

>
Judas Priest, Twist. This was 1958, the middle of the all time sun
spot peak when six was open for days on end worldwide and you could have
DXCC in a weekend on 10 with a Zippo.<<<

But some of us like that stuff. Low power and long distance on a dead
quiet freq.,..what can I say? I dig it!!

>
No sane human being with 10 meter privleges would have been caught dead
on 11; why do you think it became CB??<<

Well, somewhere, SOMEONE started tweaking hammie radios to receive and
transmit on cb, and someone spread the information of how to do it as a
buncha hammies probably told a buncha screwdriving tekknishunz how to do
it???????? Some of these tekknishunz went and.....GOT 1/2 a license and
say they now are
teknicians. A little inspiration from "The 'lil Engine that Could" and
many more cbers would become radio technicians or hammies with full
honors.
Musta been a deepthroat at a hammie radio manufacturing corporation
leaking secrets....,,<g>
It was too damn long ago to worry about.....the Hatfield and McCoy thing
can only play for so long. Both are amusing. Both are fun. Both offer
good talk and banter. Just gotta poke around!

news:<uls5vjd54bla7d@corp.supernews.com>... There was a comment here how
the FCC came down on Pilot truck stops. As with all the other FCC stuff
this is completly bogus. Pilot still sells the entire line of 10 meter
radios. The FCC went wimpering back to busting Hams. Truck stop chains
have legal departments. Ken

>Gee Ken. Does that make Jerry a congenital liar and a dreamer who needs
some pussy?<<

I believe JerryO is relaying to us what he was told. I have heard (or
read) Riley say he is doing similar things or going do this or that.
The only real changes as opposed to the pre-Riley years, is he
(Hollingsworth) is a higher profile type and is media savvy. In fact, he
enjoys it and is quite comfortable with it. Gonna watch them Pilots
myself, as if they get harassed and no others, I think they pissed off
the wrong people and it sure as hell wasn't because they sold a radio
device that can throw a deadkey and a roger beep on 10 meter.
There are many, Pilot stops......each store can have it's own charges if
it violates said rule, no? That said, it would take a DEA-type
coordinated pre-dawn raid all over the country at the same time <g>.

my point is why only bother the cb'ers? i dont see jerry, aaron, frank or anybody else tirading about the amatuer bands and on there newsgroups complaining and these problems are even more directly related to the service there fighting for. i just wanted to point out the hypocrisy in what there doing in here and also it was because aaron keeps denying the fact that there is any problems on the hf bands at all and has demanded several times lately that one of us cb'ers prove that it actaully happening. well here is his proof directly from rec.radio.shortwave

I report the porn spammer just as much, so don't
feel flattered George. Actually I and I'm sure others don't
have a problem with you posting items for sale. It's just
you don't need to post it everyday for a week. Once every couple of weeks
would be fine, I'm sure other's would agree
too.
You might want to read your TOS, you have
already violated it by making those posts, so please
be careful on how you post your ad's.

Dave!

On 19 Aug 2002 01:04:14 GMT, emccleese@aol.com (EMccleese) wrote:

>So what you are telling me is that the max a radio is putting out is the dead

The DEAD KEY IS the ONLY thing that will "hurt" the linear. On an
AM Average power meter (bird) when you whistle into it @ 100%
modulation, the watts USUALLY will go 1-2 watts higher. It WON'T
hurt the amp! On the PEAK meter (ssb meter) it goes to 20-50 watts
or more. BUT you are NOT on SSB--right? SO it is the WRONG meter to
use, Unless you are UNRIGHTOUS and WANT to DSECEIVE people into
thinking they are doing 50 watts, when dey is only doin' 5 !
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!

>key? there is no variation? Is there ever a time that the wattage would be
>higher than this? and if so why does it not hurt the amp. I am really not
>trying to act stupid, just trying to understand.

It is HARD to understand BECAUSE of ALL the LIES going out here.
Thank GOD there is a few others like me that are into THE TRUTH !

4333. Results are in! A-99(+ mods) vs Imax-2000(+ mods) vs 827 vs dipole vs cheap 5/8 and 1/2 wave

Newsgroup: rec.radio.cb
Date: 2002-08-19 16:28:04 UTC
From: Simon Bussey <s.j.bussey@GOAWAYSPAMhw.ac.uk>
Message-ID: <o0989.4492$of.27993383@news-text.cableinet.net>
Source record: 133361

I've tested the above antennas with each other over the course of a few months, the imax-2000 with GPK-1 just today. I've given a quick summary of each antenna and a table showing marks out of 5 for various aspects of the antennas.

First the operating conditions
Radio = President Lincoln, all tests @ 10w
Antenna = I have 2 poles about 20ft high separated by about 30ft there are no large objects surrounding the poles. I have two poles so I can compare two antennas side by side.
coax= H100 low loss, aprox 40-50 ft from each pole

Antennas!

A-99 Orginal
1/2 wave fiberglass antenna
�50

A-99 with GPK-1 mod
1/2 wave fibreglass with 4 large grounplanes
�80

A-99 with firestick upgrade top section mod
5/8 wave top loaded coil fiberglass
�70

Imax-2000 original
0.64 wavelength (5/8=0.625) Fibreglass antenna
�70?

Imax-2000 with GPK-1 mod
0.64 wavelength (5/8=0.625) Fibreglass with 4 large grounplanes
�100

Sirio 827
5/8 Base loaded with 8 Horizontal grounplanes
�70
---
cheap 5/8
5/8 metal basic
�20
---

cheap 1/2
1/2 metal basic
€18

1/2 homemade dipole
wire 1/2 dipole inverted V config
€1
---
performance/value/ease of construction/durability/Bandwith/overall
size-uglyness(lower=more ugly!)
*= exceptional

```
A99 1/1.5/5/4/3/5
A99+gpk1 2/1.5/4/4/3/3
A99+fup 2.5/2/4.5/4/4/4.5
imax 4/3/5/4/4/4.5
imax+gpk1 4.5/3/4/4/4/3
827 5*/5/2/4.5/5*/2
5/8 2/5*/3/3/3/3
1/2 1/5/3/3/3/4
dipole 3/5**/0/0/1/5
```

Conclusion, the Sirio 827 is the best performing omni directional antenna I have tested so far, the only drawback is that it is large and clumbersome and quite an eyesore when its up! If you want something a little more discrete that can be mounted where an antenna with grounplaneds can't (i.e against a wall I would suggest the imax-2000) If you are on a budget a cheap 5/8 will perform very well for €20.
One thing I have found is that manufactures stated gains means f all.. the a-99 doesn't have a gain of 9.9dbi! and the 827 doesn't have a gain of 7.2dbd however stated gains from the same manufacture can be used to show the performance of one antenna against another, for example looking at a sirio catalogue you can compare their antennas performace against each other and see that the 827 is their best performing antenna but you can't compare these gain figures to show how it will perform with another manufactures antenna.

Simon.....I'm curious. How did you test those.....with another station(groundwave) at about 12--15 miles? That would be about the most accurate. Skywave contacts aren't much of a barometer.

Simon,
Interesting. There are a couple of things about your testing
that I'd like to know.
1. What did you use for a signal 'source'? Just signals on
the band, in general, a particular station(s)?
2. How did you 'normalize' propagation affects?
3. Since your two poles are still close enough together that
the two antennas being tested could affect each other, how did
you compensate for that affect?

I agree, manufacturer's gain figures are more figments of
their imaginations than fact.

So what is your point, Tim? I can think of several.

1) They do it so I can, too. Seems silly but you have pushed this before.

2) Get off my case 'cause you're making me feel bad.

3) Give a guy a mike and some will act like bozos.

Fair analysis, Dick.

I suppose this is how CB myths and rumors get started:

TRUCKER A: That Pilot Truck stop sells them exports over on the
interstate got busted by the FCC.
TRUCKER B: Yeah, I heard on the Internet that the guvamint don't give
a hoot if we use illegal radios and ham frequencies and kickers and
all....'cept they can't come right out an' say that in public.
TRUCKER A: Yeah but then how come Pilot got busted?
TRUCKER A: Ohhh wal, they pissed off the wrong people y'know....it's
all parta the big guvamint conspiracy to take freedoms from the common
man.

First of all, Tim, I never said there weren't any problems on the ham bands. I asked for proof that a certain frequency on 20 meters was currently being abused. It wasn't. That's because the violators who abused it in the past got penalized by the FCC. If you read the FCC enforcement logs you will see that problems do get dealt with. Often it takes time, but it happens, and it has nothing to do with me or my posting in this NG. It happens because the majority of hams don't want their bands to become an unusable mess. BTW, I notice you seem to be a "fan" of HF trouble spots, i.e. you know just what frequencies to be on. Interesting...

I hate to say it, but a letter-writing campaign won't do any good. Congress really doesn't care because there won't be any $$$ in the lobby effort. Even if they did care, there's not much they can do because the rules are already on the books. It's up to the understaffed & underbugeted FCC to enforce the rules. Unless they get more funding, which is unlikely at this time, they aren't going to mount any large-scale enforcement efforts. They usually don't even go after individual offenders unless there's an interference complaint.

Not necessarily. I said I don't care what happens on the CB band or
"freeband". Now if someone was interfering with aircraft communications,
the local PD, or something like that, then that's different. But there's
hardly any way to get all the freebanders off the "freeband." There's just
so many illegal operators out there that if the FCC decided to go after
every illegal CB'er, they'd be kept busy for years.

One glaring error: EVERY radio mentioned in the article is an "export
CB"; not one of them is a true ten-meter radio. And as everybody
knows, "export CBs" have never been legal for use within the USA.

I enjoy listening to pirate radio stations on shortwave. They provide a hell of a lot better and more entertaining programming than any other shortwave stations. If someone is willing to take the chance of broadcasting a pirate station, then I'm willing to listen. There's no law that says you can't listen.

Jim Hampton wrote:

> Nice try, but .... a receiver for ssb could receive CW.

True, but it is much harder to construct an SSB receiver out of scrap parts!

An AM receiver can be constructed out of almost nothing!

(Just ask the guys with the Gillette Blue Blade detectors during WWII)

And CW can be received on any AM receiver, just no sidetone.....

> An am receiver ...
> well, I don't know how well I'd do without a tone.

You would do what you had to do.

Just like anything else, you could get used to it after a while.

The original telegraph operators in railroad stations and telegraph offices in the 1800's did not have any sidetone, and they did just fine!

> If the bomb drops, I
> don't know about you, but I'll likely tuck my head between my legs and kiss

You, living in NY, and I, living within 50 Miles of downtown Chicago, would both be in deep doo doo; but there will be folks in Wyoming, Iowa, Arizona, etc. who will survive.

>
> 73 from Rochester, NY
> Jim
>
> ps - the answer as to communications is how many radios survive.

My point exactly!

> Amateur
> towers are usually smaller than commercial towers and in a real nasty blow
> some are likely to survive.

Not if they are solid state and connected to any type of a metal tower!

If they are tube units, then maybe.......

> CB exists in (likely) the millions and many are
> likely to survive.

My original point again!

> Go figure. It might make sense to pool resources rather
> than spend time flaming each other (?).

And both the FCC and the ARRL should be encouraging that type of activity.

Take away your Phones, Cell phones, and Repeaters, and about all you will have left available to the average American to communicate with will be those few CB radios that somehow survived the EMP.

If only 1/2 of 1% of the existing CB radios survive, that's still a very large number of CB radios!

I don't know of any new (last 5 years) HAM transceiver made today that would survive an air burst unless it was disconnected from any antenna, and stored deep underground!

(While an old Drake TR4 series, or Hallicrafters SX series tube unit would probably work fine!)

The old 23 channel solid state CB's that are still out there in great numbers use discrete transistors and have no large scale integration, making them much more likely to survive the EMP; and MOST of the old tube CB sets should also survive.

> Constructing a set might be easy
> for a few of us, but will require components, solder, and a working
> soldering iron.

I would need some components, but could construct a working AM or CW transceiver without solder or iron.

It would take a little lot longer, but it's possible.

> My main concern just might be food and water.

If I didn't have my own supply, I would desperately be trying to communicate to find out where I could get some...

And the first thing I would look for would be a working AM receiver.

Regards,

Dennis O.

No, those are "export CB's" designed for use in other countries. In case you didn't realize it, other countries don't rely on the standard 40 channels from 26.965-27.405. For whatever reason these CB's designed for export ended up on the market here.

However, other radios such as the Uniden 2510 & 2600 were designed for 10 meter use and must be modified out of the box for use outside the 10 meter band.

They could probably be modified to operate from 28.000 - 29.700. Even if it wasn't, it could still be used as a CW transceiver, or even a beacon transmitter. If I had one, that's what I'd use it for.

>
> LOL. I don't think even you can tell me (with a straight face) that
> this is "a ham radio":
>

If a ham is using it on the 10 meter band, then it's a ham radio. Regardless, you still don't seem to get my point, so I'm going to spell it out for the last time.

There is no such thing as a radio that is illegal for amateur radio use, provided the user uses it within the limits of his/her license (frequency, power output, etc). There is no such thing as a type-acceptance requirement for amateur radio transceivers.

10 meter radios that have been modified for use on the CB band or freeband are still legal for use on 10 meters by a licensed ham, provided he/she only uses it on 10 meters.

I don't deny that many radios are being sold to CB'ers because they have "extra channels" and transmit at higher power levels. But it's the responsibility of the radio owner to use it in a legal and responsible matter. Because many people don't isn't the radio's fault.

Linear amplifiers are still available for the ham bands. Do you think they
should be illegal too, even though some of them will operate on the 11 meter
band?

Exactly there is no reason to post it in this NG. Yet Dick Head asked Aaron to post his callsign and he even went as far as saying that he is a ham and has no reason to hide. So of course I asked him to post his call just as he asked aaron to post his If you can't keep up with the thread and who said what. You dyslexic piece of shit mind your own business or go troll somewhere else

I find this very hard to believe. A felony? Hardly. To be in possession
isn't against the FCC rules, but transmitting with one is. But it's just a
violation of FCC rules, not a felony. It's not even a legal crime. The FCC
can fine you and confiscate your equipment, but they can't throw you in
jail.

Are you shure that the 25KW slug works with the BIRD 43(30ï¿½A meter)?
Usually above 10KW the slugs go with the 100ï¿½A meter.

Right. These are maximum fines for violating FCC rules. But owning a CB
that's illegal for use is not a felony, or any kind of crime whatsoever.
Even using one isn't a crime, just an FCC rules violation. They can fine
you, but can't arrest you.

Message-ID: <y_c89.10$sw7.9317427@news-text.cableinet.net>
Source record: 133399

The way they were tested performance wise by talking to local and medium distance stations I talk to regualy, upto about 50miles. Each antenna was up for a couple of weeks so I could get a 'feel' for the antenna and get signal reports from my local stations. I also had the two antenna on a switch box so I could get a report from each quicky under the same conditions. For example the sirio 827 gave about 2-3 s points stongger than the a-99 in direct comparsion depending on who i was talking to, to be honest i found the a-99 a much overrated antenna! a £20 5/8 out performed it. But anyway its more a reviw of the 'feeling' I got from each antenna rather than a precise technical assesment!
As for the two antenna next to each other I didn't take that into account and they could possibly have made a differnence but the the swr was always a near 1:1 perfect on the channels I used for testing.

LOL. I'm with you on this. I say this cautiously, however. It DOES NOT affect SWR, though a length of coax say - 4ft - MAY cause erroneous SWR readings. Try it (not you Scott, somebody else). Grab 4' of coax and hook the SWR meter up near the base of the antenna. Now hook it up near the radio and notice the difference. Which reading it right? I always thought it was the one near the antenna (I think I'mright on this, but maybe not). I suppose one could say that a certain length of coax may or may not give you an accurate SWR measurement. Still, it has no effect on the actual SWR.

Perfect SWR is for pussies anyway =) (HA HA HA)

Just kidding.
-Alan S.

I've been told by some CW people I'd trust that the CW mode on some
of the Unidens, with the exception of the HTX-100 variant from RS,
wasn't worth squat. Being there was only one step to worthless,
according to them.

The latest RS 10M rig that does SSB and FM doesn't do CW...
And it's a fine little 10M rig!

Mike

Truly, I believe they would deal with the company headquarters. There's a
Pilot north of here on
I-85 selling the crap. I dropped one of my "worthless" dimes on him, too.

sure am, all i have to do is read rec.radio.shortwave and the trash misc ham group to be right up to date on all the hot spots like the am'ers on 75 meters out on the west coast that keep jamming the ssb'ers. its alot of fun to hear the guys go at it.

Jerry<<

You're probably correct, they WOULD deal with headquarters.
Heads up..you snipped in a fashion so as to respond to me, quoted me,
but I get the feeling you are somehow insinuating it was I that said
something concerning dropping "worthless dimes", otherwise, why in hell
include it in a response to me. Drop all the dimes you want, Jer, but
leave the innuendos and insertions of what isn't there to the undeground
society, would ya'? Hammie radio needs your good will and assistance far
more than it needs your enthusiasm for patrolling cbers.

My my, Tim. And why might this be? Pilot may or may not be a decent truckstop but it would appear they are engaged in some activity that might be considered dubious at best. Bitching is the ancient right of the enlisted man and Jerry is doing so.

Is the problem doing it, saying it, saying it with vigor, saying it too often, what?? I seem to have been spared the wrath of Tim and yet we put a good stack of pix in the mail this AM. Got ourselves another naked bus driver that the troops do not have a clue what to do with. Is there something in the bandbus rules that says one has to be driving in the altogether or close to it to be on 28.085?

LOL, Peter I was thinking the same thing since the inch and 5 eights line section used the 30ua meter and they are supposed to only be good for 10 kw. But they do make 25kw slugs that work with a 30 micro amp meter.

no most of the times the guys playing music and belching on the air dont actually ID themselves as you already know but surely THEY MUST BE HAMS because they are using modified ham gear just as you guys assume and claim all the voices on 10 meters are cb'ers since there using modified cb radios. the same logic is valid. is it not?

>Tim a couple of quick questions, were these hams IDing
>every 10 minutes as required? And if so did you catch any callsigns?

He said the two antennas were 30 feet apart - more than the 1/2 wave
required to keep them from having any possible interaction.

The original question concerned wildly varying swr readings.
1. Buy new pl259 connectors for everything and solder them properly. If you don't know how and it isn't a crime, get some help from someone who does know how.
2. If that didn't fix it, check for the attachment to the vehicle to verify that is is grounded properly. This is a magnet mount antenna so this might not be an issue.
3. Check to see if the coax connection in the base of the antenna is oxidized. You might need to disassemble the thing.
4. MY VOTE: If the preceeding fails to solve the problem, buy another 20 dollar antenna.

Licensed amateurs freedom from type acceptance was never disputed by
me, and continues to be a non-issue, Tom. The real issue is the
proliferation of fake 10 meter radios and the hijacking of the name
"amateur radio" used for the purpose of selling illegal CB gear.

> And the FCC notice does not make the radios "illegal." Nobody can
> confiscate them just because you own them (unless you're operating one in an
> illegal manner). The FCC notice states that it is illegal to "import or
> market" those radios. Existing 10 meter transceivers are legal to own and
> operate (on 10 meters by licensed hams).

The FCC says the banned radios are "illegal to import and market" and
"illegal for use on CB" but has stopped short of saying they are
illegal to own. We assume this was done to avoid limiting legitimate
licensed hams ability to operate any piece of gear provided said said
gear is operated on amateur frequencies within spectral standards and
power limits.

But, as you know, the CB outlaw ops, dishonest distributors and sleazy
manufacturers found a way to exploit the laws to achieve dishonest

purposes. They fraudulently claim their pirate CB stuff falls under a privilege (freedom from type acceptance) enjoyed by legitimate ham equipment. The loophole/scam they came up with is advertising this outlaw gear as "10 meter amateur radios".

If they don't call this trash something other than what it is (11 meter bootlegger radios) then they cannot sell it without attracting lots of attention and complaints. That's why they must *desperately* try and maintain the farce that an 8 band 40 channel, echo-enabled, roger-beeped, rebel flagged, CB-type radio is a piece of "amateur gear".

Well, I do have to admit that a few extra feet of coax has its advantages. If you loop 5-6 turns of coax into a 6 inch bundle and tie it up, it makes a pretty good choke. I do this to keep rf out of the alarm system and sprinkler system.

Hi Tom. Once again, licensed amateurs freedom from type acceptance was never disputed by me, and continues to be a non-issue. The real issues are the proliferation of fake "export" radios that are not legal for CB in any known country (hence they have no where to export to), and the hijacking of the name "10 meter amateur radio" used for the purpose of selling illegal CB gear.

If anyone in the readership of this newsgroup has a shoebox full of old CB QSL cards, check through them and see if you can locate one from a KFO3255 in Greenville. That was my base station back in 1971. Like a dumbass I let all my copies get away. If you come across a copy of my old QSL card, a scan would be OK, or contact me and I will supply my postal address. Thanks in advance.

>here.

Tom, there is no country on the face of the earth that authorizes unlicensed Citizens Band type operation above 28 mHz. Since every one of these "export" radios are designed to be modified to transmit well above 28 mHz, where might they be exported to? There is no legal, legitimate export market for them.

>However, other radios such as the Uniden 2510 & 2600
>were designed for 10 meter use and must be modified
>out of the box for use outside the 10 meter band.

Not familiar with those models, but if they also operate on 11 meters and are sold in truck stops next to 148GTL Cobras, then three guesses as to what they are going to be used for the majority of the time they are sold.

That was an accident. I only was trying to keep the post brief. Sometimes
they get
extremely long. At some point, somebody posted about "worthless" dimes. I
just had
that phrase on my mind when I posted it.

Yep, that'd load up on 14.313 and 3.950. I was wondering what the
unlicensed bootleggers used on HF, and now I know.

> imbalance here.

That's what Rabbit Ears did. It takes a little moxie to ignore the letters, but he
was of the opinion that FCC was powerless to do anything, so he kept up his "activities". They fined him; he ignored that. Finally, they came and carted him off
to jail. There's no imbalance. ALL users have the privilege of using a radio, and a reasonable
expectation of being able to do so without being interfered with. That privilege extends to others
besides CBers which so many of the defenders of the illegal stuff so conveniently forget. Most
actions consist of just a warning. If that stops the infractions, then all's well that ends well. If not,
it will eventually get very costly either in money or one's freedom.

Communications is a very important tool, and a valuable asset if used correctly. It just happens
to be that it has limits, and must be regulated, its operators *should* know a little about what they
are doing in order to take advantage of it. Rampant interference only degrades its effectiveness,
and that's what the rules are for. Just as you should be able to use your CB without somebody
"throwing a carrier" on you, so should other users in other services be able to do the same without
interference or intrusions from those who are not licensed. Sounds pretty reasonable to me.

Those are "turf" wars that don't need to go on. It is caused by immature,
fire-hydrant-pissing
mental midgets that think that "their" frequency should be populated only by
them. It is a simply
matter for the SSBers to move down a few KCs. The AMers only have a few
places to operate on that mode. Control freaks abound everywhere, and the
SSBers could simply move a ways.
But NOOOOOOOO. Everybody's gotta defend their "turf"/

Actually AM is allowed below 29 Mhz, it is just that the AMers usually stay at 29 and above, I have head them, but rarely, below 29. However if you hear AM signals below 29 Mhz the chances are good it is a cber operating out of band. You will know as soon as he opens his mouth or unkeys and you hear the roger beeps, fart noises, rooster crowing, and other noises they like.

The only time I have ever seen a box latch on, was if the unit has
high gain (beta) parts in it and there is no reverse feedback loop
in the unit.

> because I honestly don't know. Thanks

To determine the proper dead key level, you need to find out the
maximum output of the amp. For a properly modulated AM signal,
the modulation peaks are four times the carrier or deadkey value.

This means if the box tops out at 150 watts, the proper amount
of dead key would be the amount to make the box deadkey 37.5 watts.

When bidding on alledged non compliant equipment, ALWAYS send the seller an email through the link on eBay. This way if they cancel the auction you can still get in touch with the seller and probably strike up a deal most often much cheaper than originally listed because the big savings on auction listing and sale fees.
This way the idiot complaining actually did you a favour...!

I hate those self proclaimed eBay police wannabees...If you wanna be a cop, join the job..

I'd have to disagree with that statement, Mike. You might want to check out the QST product reviews for both the Uniden/President HR-2510 and the Radio Shack HTX-100. The RCI-2950's also reviewed in the same issue as the HTX-100. It got an unfavorable report re. its CW capability. (Then again, Ranger wasn't an advertiser back then...but both Uniden and Radio Shack were. I know, ouch.)

You know, I just recently saw the box for a Galaxy DX99V at my local radio shop. "Big Rig Series". I got a nice chuckle out of it. Amateur transceiver? Sure. It had everything a ham looks for, like robot voice, a channel selector and a chrome case. I still wasn't convinced, but then I saw that it said 10-meter right on the box. This was proof positive this was no CB. At that point it was clear to me that this wasn't marketed to truckers. No sir, Galaxy seems to be after that lucrative "Hams who want a Big Rig" market. Big rig means big radio, not truck. God was *I* a dumbass.

I asked the owner about it and he quickly admitted that his ham customers (both of them) don't even glance at the thing. "They head straight for the Kenwoods" he said (I didn't see much else). I did notice a trucker gazing at the mighty Galaxy. It's optional chrome-plated case made his longing eyes dazzle. He seemed reverent. This was holy ground, indeed. Soberly, he utters "Boy if I had the money..." Ah, the money. The $330 price tag was all that stood between this humble man and his swang. I walked over to the trucker and said, "Nice radio huh?" He replied, "Sure is boy, I tell you what...these suckers can tawk!" What a remarkable statement that was. "These suckers can tawk". Absolutely beautiful. His words echoed through the canyons of my soul like a jake - groaning as it slows it's driver down a steep grade. I nodded knowingly, and said "You know, it's cool to meet people who are into radio. What's your callsign?"

"My what?"

And that about sums it up. Still, the box says "10 meter" so I guess it is. I mean if Galaxy says it is, then it is. 10-4?

But you're changing your story again, Aanal Aaron - you made the flat,
all-inclusive statement that the radios were totally "illegal"; you
never exempted amateur use. In fact you told me I was wrong when I
told you the radios could be used on ten meters. Go back and read what
you posted.

The real issue
> is the proliferation of fake 10 meter radios and the hijacking of the
> name "amateur radio" used for the purpose of fraudulently selling
> illegal CB gear.
>
> -Aaron-

Once again, there is no such thing as a "fake" or "phoney" ten meter
radio. What you and Jerry keep bring up are called "export CBs"; they
are NOT 10 meter radios, never have been, and never will be (unless a
licensed ham converts them for use on the 10 meter band, at which
point they are no longer CBs and cannot be operated there). "Export

CBs" have never been legal for use on CB in the USA.

The amount of problem on the ham bands are but a small minority of
people. Compared to the CB band where breaking the law is the "rule"
rather than the exception.

> after all the guys on the ham bands are making our
> entire nation look like fools to the whole world, yet your biggest concern is

After the last skip cycle, the whole world got a taste of USA CB. I'm
sure that that was not an image that I would want the world to picture
us as.

> aaron you asked
> for proof of "current torubles on the hf bands" and here it is. dont try to
> wiesel out of it now. be a man and admitt it really is going on and theres

That's what Riley H. is being tasked to do. It's HIS job to clean up the
ham bands. Why? Because he was ASKED to by hams who are fed up with
people who can't play by the rules. He has already been effective in
many cases. Hopefully, with enough noise about misuses on the CB band
being funneled to the FCC, they may assign the equivilent of Riley H. to
do the same thing here.

Seems to me that the best answer to all this wa wa hoopla, would be to make 10 meter part of the CB freqs. Perhaps the truckers could lobby for it. Or even better the hams could lobby for it.

When bidding on alledged non compliant equipment, ALWAYS send the seller an email through the link on eBay. This way if they cancel the auction you can still get in touch with the seller and probably strike up a deal most often much cheaper than originally listed because the big savings on auction listing and sale fees.
This way the idiot complaining actually did you a favour...!
I hate those self proclaimed eBay police wannabees...If you wanna be a cop, join the job..<<

This is excellent advice and it works quite well. This was mentioned one before, although nort in those exact words. I'm glad it's becoming more commonplace..maybe a reminder is needed every time an auction is mentioned <g>!

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

> CBs" have never been legal for use on CB in the USA.

Dick,

"Export" Cb radios have been around for a number of years (20+ IIRC).
THey have never been legal in import into the US, as they do not meet
type acceptance requirements for class D CB operation.

BUT, The "export" manufacturers, in an effort to remove the bottleneck
and allow increased sales into the US, have latched upon a loophole.
That loophole is the "10 meter radio". Since ham radios do not require
any type acceptance, these radios are legal to use in the ten meter ham
band by licenses hams. The problem is that they aren't REALLY intended
to be 10 meter ham radios, they only state so to attempt to "get around"
import restrictions on non type accepted CB radios. The intended market
for these radios is not 10 meter hams (Why would any 10 meter radio have
40 channelized frequencies, roger beeps, echo, and instant channel 19
switches?, and cover frequencies below the 10 meter band).

A few of the radios (Uniden HR 2510, RCI 2950 etc) do not have
channelized indicators, and tune in a more "traditional" ham manner of
KHz and Hz granularity. These radios make for a better case for intended
10 meter ham markets, but they can be easily modified to cover 11
meters. The FCC has finally ruled that even those radios are not
marketed in the spirit of ham radio, and are merely exploiting a
loophole in import regulations. This latest "clarification" is the FCC's
attempt at closing the loophole.

My question on legality is simple.."WHO FUCKING GIVES A SHIT?"

I'm only concerned with getting a message on the air to the largest # of people, with the least complex equipment, to the farthest distance possible. If the FCC, for all intents and purposes, cannot enforce existing laws, and really make no effort to do so, it stands to reason that I should make use of better equipment, especially in emergency situations, and the law be damned. Perhaps one day I will end up in CB Hell.

Not bloody likely. Most departments use FM and CB is AM for one.
Many departments use either high band (150-170mhz) or UHF (450-470mhz).
And some may still use the 30-50mhz low band freqs.

If you want to talk to them on radio, forget it. It's not a frequency open
to the general public.
Many states have laws making it illegal for unauthorized use. These are not
ham freqs so those rules don't apply.
So your choice is to listen. Spend a $100 or so and buy a scanner.

Years ago, a radio tech I know who was a chief engineer at a tv station,
made up a little gadget for his car radio.
On the seat was a box with five buttons on it. Press a button, he got a
specific radio station.
Nice idea, but he said it cost him a mere $200 to do it.

Yes. At least not legally. CB antennas sold in the US must meet certain
dielectric criteria (non-conductive to a certain voltage). Hence the lack of
metal "CB" antennas available on the market. That being said, you can buy
"10 meter" or "commercial" antennas that are nothing more than CB antennas
that are being marketed under the guise of being something else. This was
done because too many Bozo's got them into high voltage power lines and
smoked themselves.

Yes. The metal antennas you can buy cannot be advertised as "CB" antennas in the US. They can be sold under the guise of being "10 meter" or "commercial" antennas though.

You have a point Dave, but it's doubtful if the FCC has the power to stop any imports. The Chinese have friends in Washington.

epidemic make

Isolated?????? Isolated when I can tune in 28.085 at home and hear a steady
stream of trucks
"Tan-fer thar, Drah'vuh, Ah h'yeered that, ah did---SQUEAK!" Phooey! IF it
were "isolated"
that list I quoted in another thread wouldn't exist, and those importation
bans wouldn't exist. The
wheel that "SQUEAKS" (pun intended) gets the grease. If it were as
infrequent as you would like
to believe, it wouldn't be an issue with me, the other people that are
complaining and snapping photos a la Richard McCollum, or FCC.

The more I think about it, the more tempted I am to install my amplifier in
the car so I can call
high power CQ right on top of them. And ya know what? The trucks have no
rights against
it! If I succeed in preventing them from communicating, GREAT! Illegals
have NO protection
because they aren't even supposed to be there.

OTH, I don't know if you live near an interstate, but I do. And the
truckers have taken a great
liking to 10 Meters.

You can play the victimized martyr all you want. The chances of my crossing paths with you on the airwaves is quite remote, so quit whining. These archaic bandwidths are relics from the cold war era, and should be abandoned. There surely isn't enough "hams" in the world to make these bandwidths exclusive playgrounds for you "chatterboxes" to be concerned with any longer. I'm all for throwing these rules out the window, so I'm doing my part to make sure it happens.

Keep On Back-Pedaling (to the tune of The Gentrys "Keep On Dancing").
It most certainly WAS disputed by you. You claimed that all those
"phoney 10 meter radios" were completely and totally "illegal". Now
that Tom, Dick and a few others (maybe Harry?) have mentioned
amateur's freedom from type acceptance, you're changing your tune.
Just as we expected, BTW.

The real issues
> are the proliferation of fake "export" radios that are not legal for

And YOU are an expert on the CB band in every country on earth? I
highly doubt it. I also think you missed a post (in this newsgroup)
that states that the UK has an extra 40 channels that go right up to
27.995 MHz. Thus these "export radios" could be legal over there.
(note: I'm not saying that they ARE, but they could be) Also, New
Zealand's CB band used to be 1 MHz lower than the "standard" 40
channels; again, these radios could've been usable there. All we know
for sure is that they have never been legal for use in the USA.

Oh, and BTW: They're NOT "fake export radios". They ARE export radios.

The radios you mention are NOT 10 meter radios; they are "export CB
radios", which have never been legal for use in the USA. Do not pass
GO, do not collect $200.

> > But when you get right down to it, they are

They are if a licensed ham uses one there.

Since when do YOU define what is or is not a ham radio?

I can agree that an echo isn't particularly worthwhile, but the "Beep" can be a useful DXing tool. Additionally, all these things can be turned OFF if you don't like them. Try again.

I know, I know, this isn't the best way to provide juice to the box, but I drive two different vehicles, Suburban and Ford Pickup quite a bit. I would like to be able to move the radio from vehicle to vehicle when necessary.
Can I put a cigarette adapter on the power cord?
What will performance issues be?
Thanks.

I used a 2510 on CW (while mobile, even) and it seemed to do a pretty good job. If I remember right, it put out 25 watts of CW which is more than enough for the 10 meter band when condx are good.

I guess they can throw you in jail if you ignore the FCC warnings & refuse to pay the NAL's, but that's a crime similar to not showing up for court on or paying a speeding ticket. It's not a "crime" to own a modified CB.

They should do what the scanner manufacturers did after the FCC blocked
certification on scanners easily modifiable to receiver cellular signals.
They should make them next to impossible to modify for frequencies outside
the 10 meter band.

Like you have a right to use 27.555? The FCC would be shutting you down as
well. I don't think anyone operating there (with the exception of
legitimate users) has the right to complain about interference.

Hi Leland,

I just noticed this thread today and it reminded me of a story I heard years ago. It was told to me by a then, communications canada radio inspector who was administering some amateur radio liscencing exams. He told us (the radio club) a story of how they'd found one person using a CB with a badly designed 1 kilowatt linear amplifier. The "perp" was easily found since he was bleeding harmonics all over the spectrum. in fact one harmonic landed right in the aircraft band (and was less than 5 miles from an airport) and that harmonic measured a full 4 watts (which is the legal limit here in canada). After the

court case and the fine was paid, the inspectors and police were willing to let the person reclaim his legal cb gear (minus the highpowered amplifiers), but he never did so, fearing another fine as soon as he went back on the air.

On another off topic note. That bomb technician t-shirt was, from what I know, worn by soviet nuclear weapon technicians during the later part of the 80's onwards.

Who cares what the idiots do on the cb band do as long as they do not interfere with other services. The whole argument here is that it is not confined to the cb band. The overdriven, overpowered, splatter boxes cause other interference, and the encroachment into other frequencies by unlicensed operators, such as the 10 meter band with their imported "10 meter" radios, which we all know are aimed at the cb crowd, is the issue. That is what we want cleaned up.

No, the gear is marketed as amateur radio gear, and comes from the factory
operating only on 28.000 to 29.700. At least the Unidens did. They had to
be modified to operate on CB frequencies. True, they were easily modified.

> That's why they must *desperately*
> try and maintain the farce that an 8 band 40 channel, echo-enabled,
> roger-beeped, rebel flagged, CB-type radio is a piece of "amateur
> gear".

Once again, you're talking about supposed "export" CB's which were never
intended to be sold as amateur gear. I don't care if those kind of radios
are banned, but I take issue with everyone trying to ban legal amateur radio
transceivers. I also don't take issue with anyone objecting to sale of this
equipment at truck stops & CB shops, since it is obvious that they are being
marketed to CB'ers. However, when you shut down all auctions of legal 10
meter radios on ebay saying that they're intended for CB use, you're
claiming to know who the winning bidder will be and what they're going to
use the radio for.

Tom

Then why in the past did you state that these "phoney 10 meter radios" are
illegal?

Tom

Hams who abuse their priveliges also get nailed, lets not forget this. You also forget about harmonics and the problems those can cause. As I've already mentioned, having a powerful cb with piss poor harmonic supression will splatter rf noise up the spectrum well into the aircraft band.

Also your spurious emissons about hams trying to take away the CB frequencies from CB users is at best, totally inane. Hams have a fair amount of spectrum in HF, not all of which is fully utilized. Hams also have quite a bit of spectrum in the VHF UHF regioun (all the way up to microwave). Just the 70cm band alone in many countries is either 10 or 20 mhz (depending on what country you live in). Much of the UHF and above spectrum that hams have is unused. Why on earth would they want to take CB? it makes no sense at all.

Again twistie shows his ignorance. Illegal operation on the 10
meter band by truckers and other cbers is not an isolated
incident. They are there every day, all you have to do is listen.

Because - for the umpteenth time - the FCC has defined what a "dual purpose" radio is and stated clearly that they are illegal to import and market. The FCC specifies that in the majority of instances what is being called "amateur radio gear" is indeed not amateur radio gear but CB gear intended to be operated on frequencies outside the CB service.

How this could possibly threaten hams freedom from equipment type acceptance, I don't know. Most hams realize that the FCC ruling is not intended to stop them from legitimate use of equipment on the amateur bands. It IS intended to stop the illegal use of unauthorized gear among unlicensed individuals.

There are legitimate amateur "10 meter transceivers" on the market - but they are few and far between. The RS-HTX model comes to mind, it is not popular with CBers and bootleggers because of the difficulty of modification. However the vast majority of what today are being called "10 meter amateur radios" are only being called that to disguise them from the law and enable illegal sale to unlicensed individuals. Individuals who intend to use them illegally. It doesn't matter if you agree with the laws or feel they are trivial, these are the facts.

Bottom line, Tom. If you'd like to lobby the FCC and try and convince them that the "exports" and the phoney "10 meter" gear sold in truck stops and on internet CB shop sites are an important resource to hams and must not be disturbed, be my guest. But I think you might have a hard time making a case.

That is not what has been claimed here. Some posters have been claiming
that these radios are "illegal," period. Meaning nobody can own them or use
them. You yourself have helped stop auctions of 10 meter transceivers on
ebay.

> Bottom line, Tom. If you'd like to lobby the FCC and try and convince

You obviously haven't read all my posts. I don't care if "export" CB's are
banned. I don't want legitimate 10 meter radios banned.

PS - I wish it weren't, but it is.

4494. I got another GOLDMINE of NOS CB stuff AGAIN!

Newsgroup: rec.radio.cb
Date: 2002-08-20 20:20:00 UTC
From: Dave or Debby <truth@HATEspamplanetc.com>
Message-ID: <6m75mu4jv6n4vg08ho9rbk5rctq4pq1j09@4ax.com>
Source record: 133522

Twice within the last few years, I have been blessed BY GOD to get a bunch of NOS CB items from the past from stores that did CB, TV, car stereo and whatever else they worked on. CB was NOT their MAIN "bread & butter" business, so they tended to keep OLD items longer without sale. One place was in biz over 50 years, and the recent one I got last pm was in biz since @ least 1976 from what I can tell on the age of the items.

SO if anyone wants any OLD NOS CB items from the past 26 years, I MAY have it ! I don't have a lot, but I have some. I will list a few items here quickly that I'm looking to sell to re-coop $$ that I paid for to get these items. E mail me back and remove HATEspam from the address or truth@planetc.com and put CB somewhere in the subject line.

The 1st item is a NOS brand new in the box & BAG--a Turner hand power mic M +2/U ! Brownish mic wiring book with it (to tell it's age). The curly cord goes right to the mic head, which would lead me to believe that it is used, but it appears to be brand new in da box, since it has the origional black stopper between the mic key and the mic! Looks NEW too! Did these come with a battery? I better look inside to remove it!

A NOS TUG9-D104 base mic. "Conneaut Technologies" on warr. card. I'd have to open bottom to see mfg. date, but I guess 15-20 years old NOS. I Also have a NOS GOLD D104 Bicentennial edition from '76 that the company says is worth over $500 too for sale.

I got a bunch of those CDE alternator filters that go under the hood that I haven't seen in years. Also got some different "flip mounts" than the ones I already have, the Valor ones. Got a bunch of Valor 101HD (it's really a 101cpw mount) for OLD ford pick up truck mirrors.

CB BAY is now open. E mail me the highest price you will pay for the above items and IF you want something from the past that I didn't mention, E MAIL ME and ASK ME if I have it. I have amassed an incredible variety of CB items over my 23 years and more of being a 1 man operation CB shop. Let me know what you are looking for!
Dave!

Is there any difference between the Francis CB28 Wheeler Dealer and the CB50 Amazer other than color? I'm going to go with a corner bumper mount on my Tahoe for now. Not brave enough to drill the roof, yet.

Thanks,

Steve

>
>Tom

1) The auctions were "blocked" as a result of eBay's policy on
prohibited items.

2) eBay's policies are the result of FCC advisories concerning
non-type accepted CB's disguised as 10 meter radios.

3) The FCC advisories are the result of existing CB rules which are
contained in Part 95.

If you have a problem with eBay or FCC policies I suggest you take it
up with them.

Agreed. Radio Shack did it with the HTX10. But the mfrs' are not trying to
market to
hams; to make them unmodifiable would take away a big part of their customer
base.

No, it's just the way you worded it. One of the funniest things I've heard
on 27.555 is the Alpha Tangoes and the anti-Alpha Tangoes arguing over who
is the rightful user of that freq, when none of them are.

> on 555 and cause us trouble

The interference created on the "freeband" is self-generated. *Most* CB
users have
no real communications training and, therefore, the understanding of how
their operations
affect others as well as themselves. There are no guidelines nor
discipline. And those
persons who happen to have a ham ticket and operate on illegal frequencies
are no more
and no less than the "freebanders", and those who would ask for "protection"
by having FCC target one group of illegals as opposed to another so "they"
can continue their illegal activities
are particularly stretching the limits of credibility. Anyone who operates
illegally should accept the
risks and the responsibility (something seemingly absent from many of the
ops) of their actions.
That goes for so-called "hams", too. If a licensed ham does this, then I
don't want to associate with
him.

Jerry

The original HR2510 (s/n 830xxxx) was capable of being easily modified
for CB with a 10K resistor and cutting two traces on the PCB. Later
versions of the HR2510 and the HR2600 could NOT be converted to CB
without a microprocessor transplant. One would think that the FCC
engineers would know this as well as the techs do. This one wonders
why they don't?

Or make 11m part of the ten meter band? But, of course, that would
shut CB down completely. And that ain't gonna happen.

One has to wonder why a no-code Tech would be so concerned about
10-meter QRM in the first place. Any comments, Voobie Baby (to the
tune of Dion "Ruby Baby") since he can't operate there anyhow.
Apparently he thinks the hams can't deal with it. Believe me, they
can!

Depending on the age of the truck, most "cigarette lighter" sockets are rated at 20 amps these days for phones, computers, etc.
By "box" im guessing you mean a CB. If'n yer running some heat, dont expect to run more that a 50 watt "mosquito" amp through that circuit, Fords catch fire easily :)
I ran that setup on vacation once and had no problems.

Yes and they can be turned on and if it is a Ham only radio why would they have these devices on them I haven't seen any of the new Trancievers Yaseu, Kenwood, Icom with all the bells and whistles have a robot voice changer on it or roger beep or even echo Why not they are $3,000 and up radios.

Cross-posted to: misc.transport.trucking,rec.radio.cb

While cruising the boulevard towards Miami this morning i noticed bleedover
from another channel so i turned the dial and could'nt locate the
transmitted freq. on 11meter, damn i guess their downstairs so i finally
locked in on 26.735 and
briefly monitored 3 ABF trucks using this freq. for standard communications.
I can't bitch because i use the basment for DX'n sometimes but using them
for regular 2-way is absurd.

> Alan S.

I went into the same store a week later. The Galaxy was still there, unsold. Next to it on the glass display case was a small vial of white powder. Above this was a sign that indicated it was "MEDICAL COCAINE" . Below this, in smaller type, the disclaimer, "for use by licensed physicians". It seemed odd and out of place. How many physicians bought their medications in a radio shop? And what was to prevent its misuse? Curious, I asked the owner about it. Did he check customers credentials to ensure they were physicians?

"It's their responsibility to get the license, not mine," he shrugged, "how they use it is up to whoever buys it". I asked him if he thought that any of the people who bought it were not doctors. "Who knows?" he said. It's no big deal he assured me, lots of this stuff is sold to non-doctors on the streets every day. "And besides," he winked, "chances of gettin caught are pretty slim".

Next to the cocaine, I noticed a rack of magazines with titles like CHICKENHAWK and NAMBLA PARADE. "What about this stuff?" I pointed at them, "it's obviously kiddie porn, isn't it?". The owner swiftly called my attention to his red crayon-scrawled disclaimer: "FOR EDUCATIONAL USE ONLY". I stood by while he sold a couple of the magazines to a chubby, acne-faced man whose pockets were bulging with penny candy. After the man left the shop I asked the owner whether or not he thought educational purposes were served by this particular sale.

He seemed particularly exasperated by my inquiry. His voice rose several octaves and took on a raspy, defensive edge. "Look dude, I'm just giving people what they want" he said, "And...and...just because some people break laws, that's no reason to ban stuff anyways! Penalize the offenders, not the products, that's what I say. Hell, what is this, Nazi Germany? Ever heard of the Constitution? I got my RIGHTS!". To emphasize this last point, he slammed his bulging cash register drawer shut.

KA-CHING!

-Aaron-

Get on Channel 22 Am in Richmond, VA and just tune up on that channel.
That gets the crowd on that channel flappin they lips fo the rest of the day.

They also get in their mobiles and go searchin for whover does that.
First they must realize that THEY don't OWN the channel
Then they can cry all theys wants.

They yell, talk and flap their lips beyond the range of their mics so as to create distortion and their radio sounds like shit above it all.

I be makin a "List" of names who I hear on dat channel.
usin my Pro-200x series scanner. I just listen to handles being blurtted out over the air.

I be Scoping Them Out at ALL hours of da night while theys sittin behind that microphone while holding their good-buddys' hand talkin trash on the cb.

I gots me a list and I'm.....gettin names!!
Gonna shut you down and
Cut yo coax whens you be talkins on dat radio that you pays too much for.
What kinda job lets you sits at home on yo lazy ass and flap your lips.
Must be on Welfare.
I didn't knows you could waste foodstamps on a childrens' band radio. But I guess yous gots to have something to do while you "entertain yourself" or let your good-buddy suck your dick for ya!!
BWAAHAHAHAHAHAHAHA!!!

>From: radiobuff0@mailcity.net (JJ)
Who cares what the idiots do on the cb band do as long as they do not interfere with other services. The whole argument here is that it is not confined to the cb band.
<<

First off, I don't see it as an argument. A point must first be raised for an argment to be presented. As you claim, as long as they don't interfere with the other services, "Who cares"? Some appear to be under the influence of the mistaken thought that those who do frequent this forum are hammie intruders and that raising an "argument" here and now will end your argument.

>The overdriven, overpowered, splatter boxes cause other interference, and the encroachment into other frequencies by unlicensed operators, <<

I'd be happy to discuss either, but you are blending 2 separate subjects with dire attempted inferences.

>such as the 10 meter band with their imported "10 meter" radios, which we all know are aimed at the cb crowd, is the issue. That is what we want cleaned up.<<

And no one has a problem with that, nor have I ever seen anyone on this group ever disagree with that..so why does it continue to be addressed here? Letting off steam....?....simply say so. S' cool! You agree with murder?
You want murder cleaned up?
Are you lobbying against guns? Knives? Baseball bats? How about drugs? You want drugs gone, or just illegal drugs gone? You think it's a coincidence heroin is enjoying such resurgence? It ain't civilians bringing it in. You lobbying against any of that? Excuse me if I make light of the alleged priorities of some of our cb detractors.

The more you post, the more you show your pathetic lack of understanding of how radio
works. If you had your way, not only would radio become useless for others, but YOU would
be screaming for somebody to do something. Bud, the situation you vainly wish for has already
existed----------around 80 years ago. We are talking about treaties, nations getting along with
each other, and maximizing the ability of ALL people to have access to a very beneficial resource.
You can disagree and use foul names all you want to, but Amateur Radio worldwide has many,
many friends in high places because, time and time again, it has proven to be a valuable asset in
times of emergency, natural disaster--even in the aftermath of 9/11 when hams remained on station
for weeks and months to provide backup communications that were lost when the towers fell. In-
stead of "doing away with archaic spectrum", State legislatures, and Congress are, even now, passing laws to abate zoning restrictions (city and county), and homeowners' associations' rules against Amateur
antennas--hardly what you want to hear. The value of a given communications service has absolutely nothing to do with quantity, but quality. Amateur Radio offers thru various
related organizations training, discipline, understanding of message handling, and the characteristics
of particular bands and frequencies to facilitate the rapid movement of emergency traffic from one
point to another. Just because a "certain" radio group has lots of devotees doesn't make it the most
important thing around. If you really think that world governments, including ours, give respect to
such an unbridled group, more given to outlaw actions such as out-banding than any other, you are
extremely out of the loop!

CB, there is no other service thats more interefered with. dont think
we're used to it by now? tell riley to clean up the hams who intrude on
555 and cause us trouble <<

"Like you have a right to use 27.555? The FCC would be shutting you down
as well. I don't think anyone operating there (with the exception of
legitimate users) has the right to complain about interference. Tom"

Hiya, Tom! I think an observation isn't necessarily a complaint. 27.555
is jammed daily with worldwide stations, many from the states and has
been for years. Matter of fact, the Arizona boys claimed it as their own
about 2 and a half years ago and they pretty much have eminent domain on
it with the exception of the pile, the horn and Californication
stations. Feds can't care less. Give a listen.

>No, it's just the way you worded it. One of the funniest things I've
heard on 27.555 is the Alpha Tangoes and the anti-Alpha Tangoes arguing
over who is the rightful user of that freq, when none of them are.
Tom<<

The Alfa-Tango stations have squatted on that channel since the time of
Moses. AKA Bob and the gang just rattled some cages. The FCC musta given
'em their full blessings cause the Phoenix gang is still at it...like I
said, unlesss the 'pile, horn, or Californ-I-A drops it down,,,,,,I
agree, none are the rightful users of the freqs., but it IS abandoned
for it's intended and the feds don't care about small power DX there.
No matter,,,the AT's have an alternate channel, if not several.

4526. Re: Illegal 10 Meter Radios

"jerry we come from CB, there is no other service thats more interefered
with. dont think we're used to it by now? tell riley to clean up the
hams who intrude on 555 and cause us trouble "

>The interference created on the "freeband" is self-generated. <<

Yea, usually by hammies with jacked-up overpowered rigs. <g>
Seriously, how can you even set forth such stuff? The same can be said
for all of the hammie freqs: "The interference created on the hammie
freqs. are all self-generated". Kinda loopy, eh?

>*Most* CB
users have
no real communications training and, therefore, the understanding of how
their operations
affect others as well as themselves. There are no guidelines nor
discipline.
<<

The guidelines are set forth in part 95 with the sale of all new cb
radios. If deemed necessary, the feds would do more than include it. It
isn't. They haven't.

>And those
persons who happen to have a ham ticket and operate on illegal
frequencies are no more
and no less than the "freebanders", and those who would ask for
"protection" by having FCC target one group of illegals as opposed to
another so "they" can continue their illegal activities
are particularly stretching the limits of credibility. Anyone who
operates illegally should accept the
risks and the responsibility (something seemingly absent from many of
the ops) of their actions.<<

Which ops? Cbers, hammies, or both?

>That goes for so-called "hams", too. If a licensed ham does this, then
I don't want to associate with
him.
Jerry<<

Well, I gotta admire your steadfastness. I just don't think these cbers
are the correct mark for your fire. Even though I never have operated on

the freq you informed me of way back when we both wore younger men's clothes, you can rest assured I never WILL operate on that freeband freq we discussed and it was because you chose to have an intelligent conversation with a freebanding, low power FM pirate. If you would have shut me out simply because I said I enjoyed DX and freeband a time or two, I suppose I could have been BSing with someone from triple 5 when they asked me to QSY to "THAT FREQ." and I may have done it. Now, since you have enlightened me on the error of my ways and that certain freq is to be avoided at all costs, you shouldn't take the "F*#@ You" attitude to all those who may bend the rules, or even blatantly disregard certain ones. It's lifers like you that can make a difference. You can kill your hobby, or pass it on to a new generation of thugs or elmers, after all, y'all are creating them.

Joe Fucking Blow

>The lack of understanding and ignorance of the above post basically
explains the attitude
of most of the illegals. If the shoe were on the other foot and HE were
the one being interferred
with, it would be different....
Jerry<<

The shoe IS on the other foot and some of us know exactly how you feel.
Some of you lump ALL illegals in with what you consider shoddy behavior
not to be tolerated yet do not regard other more benign breaking of laws
as pertinent, such as a violation on eleven meters. A shining
illustration is you stating you care not what occurs on the legal 40.
  It is the lack of understanding and ignorance of a select few that
cannot separate the simple DXer on a legal rig, freebander DXer that
uses no power and the megawatt killa that is jamming 10 meters.

Hello David:

The modifications can be done, any thing can be done.

But it would cost $everal times more money than it would be to go buy a
100 dollar Radio Shack Scanner, or even a used cheaper one, that will
easily receive all those frequencies.

Besides its nice to chit chat on the radio while listening in on all the
Scanner radio traffic.

Jay in the Mojave

Perhaps the truckers could lobby for it. Or even better the hams could lobby for it<<

There isn't any "hoopla" to speak of. Just the same 2 or 3 angry hammies claiming it's there when it's really not. Isolated incidents do not an epidemic make.

>Isolated?????? Isolated when I can tune in 28.085 at home and hear a steady stream of trucks
"Tan-fer thar, Drah'vuh, Ah h'yeered that, ah did---SQUEAK!" Phooey!
<<

Heheh! Hear me, bud! I didn't say non-existent. But I did stay in Rock Hill at least once per year the last several years. I cruise through Charlotte at least once per year. Last year I was in Charlotte several times, This year, as at Christmas time, I checked out the hammie bands in question....nuthin'.....matter of fact , ever since this issue has been addressed, I have intentionally scanned on automatic mode certain freqs and only ONCE can I remember hearing something on 085. Granted, it isn't any scientific report, but we can ask the the regs in here to switch on over and and see what, if anything they hear. The lack of discussion of such activities does not preclude it from happening, but it does shed quite an accurate light upon the law of averages..

>IF it
were "isolated"
that list I quoted in another thread wouldn't exist, and those importation bans wouldn't exist.<<

Hmmm, another great topic.....I think we can run with this...remind me to come back to this.

>The
wheel that "SQUEAKS" (pun intended) gets the grease. If it were as infrequent as you would like to believe, it wouldn't be an issue with me, the other people that are complaining and snapping photos a la Richard McCollum, or FCC. <<

Actually, for the most part, I think that greasy single old wheel is full of a few rusty spokes and a few shot bearings as opposed to all hubs in need of attention and rebuild. There will always be a spoke or 2 that needs serious attention. When this occurs, we dispense with the problem, we don't keep squirting a flammable substance, such as grease on the wheel.

>The more I think about it, the more tempted I am to install my amplifier in the car so I can call high power CQ right on top of them.
<<

See above.

>>And ya know what? The trucks have no rights against
it! If I succeed in preventing them from communicating, GREAT! Illegals have NO protection
because they aren't even supposed to be there.<<

You come across as if that is irritating or bothersome to some of us "illegals."
Jerry, just because some of us shoot skip doesn't mean we freeband. Just because some of us freeband doesn't mean we use amps. Just because some of us use amps doesn't mean we talk on hammie bands. This has been attempted to be set forth in the most simplest of terms for years in here and a few desperados pining away for "Happy Days" are incapable of separating the facts.
OTH, I don't know if you live near an interstate, but I do. And the truckers have taken a great
liking to 10 Meters.
Jerry
<<

I-75, I-275, and I-4. Channel 19 is never dead....but the 085 in question is.

Dick N�BK

****
Dick, I have to disagree with you on this one (nice ta meetcha, by the way).
"Swing", when properly applied to an AM transmitter, results in a fifty watt
radio
out-talking someone with ten times the power. CB radio isn't meant to have
studio
quality sound. A good, UN-amplified crystal mic and lots of swing will yield
a radio
that can talk right through someone with a lot of dead-key power. I have
heard it countless times when someone gets it in their head to "throw a
blanket" over a certain channel.
There's always that one brilliant character out there talking right through
the carrier......

There's also a lot less heterodyning going on when there isn't very much
carrier signal for the other guy to beat against.

Naturally there are people out there who take it to extremes with loads of
splatter on adjacent channels as a result........then, NOBODY talks, but the
first thing I try to do when I unpack a new radio is find out how far I can
turn down the dead-key power.
One only needs "enough carrier to connect the two radios", and the rest can
be modulation.
That's precisely why sideband is so great, and an AM radio with lots of
swing allows folks on AM to utilize all the benefits of sideband while still
staying in the mainstream of the AM channels. I want my radio to sound sharp
and crisp, the channels are only ten khz wide anyway.......we aren't
transmitting hi fidelity, we're transmitting speech, and that sharp,
piercing clarity is what makes it easy to understand through all the hash
and trash.

None of this carries technical explanations to satisfy the horde of
"Almighty God"
Advanced Extra Class operators who claim not to be out there, and it isn't
meant to.
It's a simple question of practicality, backed up by proof in-the-field.

My personal recommendation is to back the dead-key power down to about 1 and
a half watts.....maybe two, and let the audio drive the finals as far as

they will go.
I hate having to lug around anything bigger than a hundred watts, because of the extra wiring and radical power requirements involved. My car's alternator is already straining at the thought of just one more current hungry device, and I hate having to resort to anything bigger than those already ugly Firestick type antennas. Controlled Carrier is the absolute loudest thing walking the AM planet.

BS, all the "swing" does is make output and s meters wildly swing
which makes cbers think they have a "big signal". A properly high
level modulated class c final will put out just as much signal as
a radio with "swang", the only difference is the receiver s meter
will not show much if any swing when receiving such a signal. But
use a radio with "swang" and the meter bounces around and that
gives the illusion of a "big signal".

I have to disagree on the whole issue of wild amounts of swing. I'm talking about turning the carrier down to that 1 or 2 watts for the sole purpose of gaining more swing.

Here's they way I see it. The only way you're gonna see that much swing is to overmodulate the radio. I'm sure you're familiar with the waveform of which I speak.

Within that overmodulated waveform is an area of no output during certain intervals. It's during those intervals that a signal, almost any signal, can sneak in and get through.

If the radios were the same and one was set for minimum carrier and the other was set more properly both radios would still be heard. In the same scenario, at a range where the weaker carrier isn't showing up, the radio with the least carrier would sound like a distorted ssb signal in the distance whereas the one with more carrier would still sound ok.

I've heard a bunch of these low dead key power radios in the distance. The only thing that really comes thru is the audio tones that drove the radio to full peak output. Mostly lows for guys and hi's for the ladies. It's a pain

in the ass to have to decipher what they're saying half the time.

SOURCE: 47 FR 36201, Aug. 19, 1982, unless

otherwise noted.

Subpart A-The Standard

1204.1 Scope of the standard.

(a) General. This subpart A of part

1204 is a consumer product safety

standard which prescribes safety requirements

for Citizens Band

omnidirectional base station antennas.

The standard is intended to reduce the

risk of electrocution or serious injuries

occurring if the antenna contacts an

electric power line while the antenna is

being put up or taken down. One way

that this can be accomplished is to insulate
the antenna so that if it contacts
the power line, there is less of a
likelihood that a harmful electric current
will be transmitted from the
power line through the antenna and
mast and ultimately through a person
holding the antenna mast. Another
possible way to provide this protection
is to incorporate an insulating barrier
between the antenna and the mast or
other supporting structure, so that a
harmful electric current will not pass
from the antenna to a person in contact
with the mast. (If this alternative
were chosen, the feed cable from the
antenna would have to be insulated or
otherwise protected so that it would
not provide an electrical path to the
mast or a person touching the cable.)
(b) Description of the standard-(1) Performance
tests. The standard describes
two performance tests to determine if
the means chosen by the manufacturer
to protect against the shock hazard
will provide adequate protection.
(i) First, there is an Insulating Material
Effectiveness Test (§ 1204.4(d) of
this subpart) in which a high voltage
electrode or test rod is brought into
contact with the antenna at any point

within the protection zone established
by § 1204.2(k) of this subpart to ensure
that the insulation can withstand the
voltage for 5 minutes without transmitting
more than 5 milliamperes (mA)
root-mean-square (rms) of electric current.
(ii) The other test is an Antenna-
Mast System Test (§ 1204.4(e) of this
subpart) which is intended to determine
whether the means provided to
protect against electrocution will
withstand the stress imposed when an
antenna-mast system falls onto a
power line. This test consists of mounting
the antenna to be tested on a specified
mast and allowing the assembled
antenna and mast to fall onto a power
line of 14,500 volts rms phase to ground.
(2) Recommended materials. (i) Since a
substantial portion of the accidents addressed
by this standard occur when
the antenna is being taken down after
it has been installed in an outdoor environment
for a number of years, the
materials selected to provide protection
from shock should be weather resistant.
(ii) Although other materials may
also be suitable, materials meeting the
following criteria should be reasonably
weather resistant:
(A) Material composition includes an

ultraviolet stabilizer or screen.

(B) Heat resistance of 212 ?F (100 ?C)

without loss of elasticity (ANSI/ASTM

D 746-79).

(C) Moisture absorption of not more

than 0.2 percent (ANSI/ASTM D 570-77).

(D) For heat shrinkable sleeving,

temperature flexibility to 40 ?F (40

?C) with no cracks (Mil Spec. MIL-I-

23053C, 20 May 1976).

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00239 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

240

(3) Warning: Section 1204.5 of this

subpart requires a statement in the instructions

that the standard will not

protect in every instance against electrocution

caused by contact with

power lines. This is because the standard

is intended to provide protection

for power line voltages of up to 14,500

volts. Some power lines carry more

voltage than this. In addition, not all

portions of the antenna are required to

be insulated, and the antenna's mast is

not required to be insulated. If the

power line were to contact one of these

uninsulated areas, an electrocution

could occur. Furthermore, when the

antenna was manufactured it may not

in fact have complied with the standard, or the insulation may have deteriorated or been damaged since the antenna was manufactured. In addition, the insulation cannot withstand high voltages indefinitely, and, after a period of time, the current may penetrate the insulation. Therefore, even if a harmful amount of current is not transmitted immediately, the user should not attempt to remove an antenna that falls into electric power lines, since the insulation could break down while the antenna is being removed. For these reasons, persons handling these antennas should ensure that the antennas are kept away from power lines so that the antenna cannot contact the line while being transported, installed, or removed, even if the antenna is dropped. The Commission recommends that antennas be located at least twice the combined length of the antenna and mast from the nearest power line.

(c) Scope. (1) Except as noted below, the standard applies to all omnidirectional CB base station antennas that are consumer products and are manufactured or imported on or after May 24, 1983.

(2) The Commission may extend the effective date of the standard for as long as an additional 90 days for any firm which has 750 employees or fewer and, is not a subsidiary or division of a firm having more than 750 employees, and which manufactures or imports products subject to the standard, upon written application, addressed to the Associate Executive Director for Compliance and Administrative litigation, Consumer Product Safety Commission, Washington, D.C. 20207, received not later than January 17, 1983. An application for extension of the effective date shall:

(i) Identify the requesting firm as a manufacturer or importer of products subject to the standard.

(ii) State the total number of employees of the firm, including all employees of any subsidiary or division, and all employees of any firm of which the requesting firm is a subsidiary or division.

(iii) Request extension of the effective date to a specific date not later than May 27, 1983.

(iv) Explain why the requested extension of the effective date is needed.

(v) Describe all activities undertaken

by the requesting firm to achieve compliance with the requirements of the standard.

(vi) State that the requesting firm will market complying products after the extended effective date.

(3) The Associate Executive Director for Compliance and Administrative Litigation will evaluate each request for extension of the effective date. The following criteria will be used in determining whether to grant an application for extension of the effective date:

(i) Does the application demonstrate that the requesting firm cannot meet the general effective date,

(ii) Does the application demonstrate that the requesting firm has made a good faith effort to achieve compliance with the requirements of the standard by the general effective date.

(iii) Does the application demonstrate that the firm is likely to produce or market complying products if the requested extension is granted.

(4) The Associate Executive Director will advise each requesting firm in writing if the requested extension is granted or denied. If the Associate Executive Director for Compliance and Administrative Litigation denies a request

for extension of the effective

date, the firm may request the Commission

to reconsider the denial.

(5) Section 3(a)(1) of the Consumer

Product Safety Act (CPSA, 15 U.S.C.

2052(a)(1) defines the term consumer

product as an ''article, or component

part thereof, produced or distributed (i)

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00240 Fmt
8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

for sale to a consumer for use in or

around a permanent or temporary

household or residence, a school, in

recreation, or otherwise, or (ii) for the

personal use, consumption or enjoyment

of a consumer in or around a permanent

or temporary household or residence,

a school, in recreation, or otherwise.''

The term does not include

products that are not customarily produced

or distributed for sale to, or for

the use or consumption by, or enjoyment

of, a consumer. A limited exception

from coverage of the standard is

provided by section 18(a) of the CPSA,

15 U.S.C. 2067, for certain products intended

for export and meeting the requirements

of section 18(b) of the

CPSA.

(d) Prohibited acts. It is unlawful to manufacture for sale, offer for sale, distribute in commerce, or import into the United States any product subject to this standard that does not conform with the standard.

(Sec. 9(h), Pub. L. 92-573, 86 Stat. 1207, as amended, Pub. L. 95-319, 92 Stat. 386, Pub. L. 95-631, 92 Stat. 3742, Pub. L. 96-373, 94 Stat. 1366, Pub. L. 97-35, 95 Stat. 703, 15 U.S.C. 2058(h))

[47 FR 36201, Aug. 19, 1982, as amended at 48 FR 29683, June 28, 1983]

§ 1204.2 Definitions.

In addition to the definitions given in section 3 of the Consumer Product Safety Act (15 U.S.C. 2052), the following definitions apply for the purposes of this standard.

(a) Antenna system means a device for radiating and/or receiving radio waves. Where they are present, the antenna system includes active elements, ground plane elements, matching networks, element-connecting hardware, mounting hardware, feed cable, and other functional or non-functional elements.

(b) Antenna-mast system means the completed assembly of the antenna system and the mast.

(c) Base station means a transmitter

and/or receiver in a fixed location.

(d) Citizens Band (CB) means the frequency band allocated for citizen's band radio service.

(e) Current means the total rate at which electrical charge is transported through the antenna-mast system in response to the applied test voltage, including both capacitive and resistive components.

(f) Electrical breakdown means a failure of the insulating material used with the antenna, such that in the Antenna-Mast System Test of § 1204.4(e) of this subpart, the current flowing through the antenna-mast system is sufficient to actuate the automatic internal cut-off of the high voltage source or exceeds the current that can be measured by the current monitoring device.

(g) Feed cable means the electrical cable that connects the antenna system to the transmitter and/or receiver.

(h) Field joint means any joint between antenna system sections or parts, or between the antenna system and the mast, that is not assembled by the antenna manufacturer.

(i) Insulating material and insulation mean a material that has a very small

electric conductivity.

(j) Omnidirectional antenna means an antenna system designed or intended primarily to exhibit approximately equal signal transmission or reception capabilities in all horizontal directions simultaneously.

(k) Protection zone means that portion of an antenna system which can contact the test rod during the Insulating Material Effectiveness Test or can contact the power line during the Antenna-Mast System Test. This zone consists of those elements of the antenna system extending from the uppermost tip of an upright antenna downward to a point that is 12.0 inches (30.5 cm) above the top of the mast when the antenna system is mounted according to the manufacturer's instructions.

(l) Voltage, phase to ground, means that voltage which exists between a single phase of a three phase power system and ground.

§ 1204.3 Requirements.

All omnidirectional CB base station antennas are required to comply with the following requirements.

(a) Field joints. Parts or accessories intended to protect a field joint so that it will meet any other requirement of

this standard, and that must be put

into place by the person assembling the

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00241 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

242

16 CFR Ch. II (1-1-01 Edition) § 1204.4

antenna system, shall be integral with,

or not readily removable from, at least

one of the antenna sections or parts involved

in the joint or shall be necessary

in order to complete the joint.

(b) Feed cable. When compliance with

the requirements of this standard depends

on the insulating or other properties

of the feed cable, at least 50 feet

of the cable shall be supplied by the

manufacturer with the antenna system.

(c) Electrical protection. Antenna systems

shall be manufactured so that if

all points within the protection zone of

an antenna system were tested by the

Insulating Material Effectiveness Test

of § 1204.4(d) of this subpart, and the

Antenna-Mast System Test of § 1204.4(e)

of this subpart, the current measured

by the current monitoring device connected

to the mast would be no greater

than 5.0 milliamperes rms and no electrical

breakdown of the antenna system's

insulating material would occur.

§ 1204.4 Electric shock protection

tests.

(a) Safety precautions. For tests involving high voltage, the following recommended minimum safety precautions should be followed:

(1) At least one test operator and one test observer (preferably one with cardiopulmonary resusitation (CPR) training) should be present at every test.

(2) The test area (outdoors or indoors) should secure against accidental intrusion by other persons during tests.

(3) Test areas located indoors should be ventilated to avoid buildup of potentially hazardous concentrations of gaseous byproducts which may result from the tests.

(4) Fire extinguishers should be easily accessible in case materials on the test specimen ignite.

(5) ''High Voltage Test'' warning devices should be activated before start of a test.

(6) Emergency phone numbers should be posted.

(b) Test conditions. (1) Specimens. All specimens shall be tested as supplied by the manufacturer, following assembly in accordance with the manufacturer's instructions except as provided in

paragraph (e)(2) of this section.

(2) Temperature. Ambient temperature shall be in the range from 32 ?F (0 ?C) to 104 ?F (40 ?C)

(3) Relative humidity. Ambient relative humidity shall be in the range of from 10 to 90 percent.

(4) Voltage. Voltage, phase to ground, of the power line or test probe shall be 14.5 kilovolts rms, 60 hertz.

(5) Conditioning. Prior to testing, all specimens shall be exposed for at least 4 hours to the ambient test area environment.

(c) Test equipment. (1) High voltage source capable of delivering at least 15 mA rms at 14.5 kV rms, 60 Hz. The source should have an automatic internal cut-off actuated by a preset current level.

(2) Instrumentation to measure the rms voltage applied to the antenna system.

(3) Current monitoring device to indicate hazardous components of the total rms current flowing to ground through the mast. One configuration of the circuitry for the current monitoring device (shown in Figure 1) consists of three parallel branches as follows. One branch consists of a resistor in series with a true-rms milliammeter with a maximum error of 5% of the reading in

the frequency range of 50Hz to 10MHz

(the total of the resistor and the internal

resistance of the milliammeter is

to be 1000 ohms). A parallel branch consists

of a 1000 ohm resistor in series

with a 0.08 microfarad capacitor. Another

parallel branch should consist of

a spark gap rated at 50 to 100 volts as

a meter protection device. A different

current monitoring device may be used

if the measured value of the rms current

corresponds to that indicated by

the configuration described above.

(4) For the Insulating Material Effectiveness

Test:

(i) High voltage electrode or test rod

consisting of 1/4 in. (6.4 mm) diameter

aluminum rod.

(ii) Support jig, structure, or hanger

made of insulating material which is

capable of holding antenna system test

specimens electrically isolated from all

surrounding structures or ground.

(5) For the Antenna-Mast System

Test, a high voltage test facility, as

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00242 Fmt
8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

shown in Figures 2 and 3, which includes

a single power line spanning between

two poles 95 to 105 feet (29 to 32 meters) apart, a tensioning device to adjust the cable sag to from 9 to 12 inches (23 to 30 cm), and a pivot fixture (Figure 2), for holding the base of an antenna-mast system, which can be moved horizontally to adjust the distance to the cable. The cable consists of 1/4 in. diameter 7 by 19 galvanized steel aircraft cable. The low point of the cable shall be between 28 and 29 feet (8.5 to 8.8 meters) above a horizontal plane through the pivot axis of the pivot fixture.

(d) Insulating Material Effectiveness Test procedure. (1) A short piece of typical tubular mast shall be attached to the antenna system to be tested, in accordance with mounting instructions provided with the antenna system by the manufacturer.

(2) If a feed cable is provided with the antenna system, it shall be used in the test. If no cable is provided with the antenna system, a RG-213 cable shall be used in the test (Mil Spec. MIL-C-17/ 75C, 15 March 1977). In either case, the cable shall be connected to the antenna system, installed parallel to the mast, and secured by taping or similar means at one point on the mast. The side of

the bottom end of the cable also shall be secured to the mast.

(3) With the antenna system properly supported and isolated from ground and with the current monitoring device connected to the mast, the test rod shall be connected to the high voltage source and brought into contact with the antenna system at any point within the protection zone (see § 1204.2(k) of this subpart). For each contact point, the voltage shall be increased from 0 to 14.5 kV at a rate of at least 2 kV per second and held at 14.5 kV for 5.0 minutes. Current shall be monitored and the maximum recorded.

(e) Antenna-Mast System Test procedure.

(1) The antenna system to be tested shall be attached to a mast in accordance with mounting instructions provided by the manufacturer. The mast shall be assembled of commercially available 11/4 inch outside diameter 16 gauge tubular steel sections, commonly sold for antenna-mast installations in 5 and 10 feet lengths. The slip joints between the mast sections shall be secured (as with screws) to prohibit rotational or longitudinal movement at the joint. The length of the mast shall be such that when it is

mounted in the pivot fixture of the
high voltage test facility, the distance
from the pivot to the uppermost point
on the antenna system is 41.75 to 42.25
feet (12.7 to 12.9 meters).
(2) If a feed cable is provided with the
antenna system, it shall be used in the
test. If no cable is provided with the
antenna system, a RG-213 feed cable
shall be used in the test for specification
of an RG-213 cable see (Mil. Spec.
MIL-C-17/75C, 15 March 1977). In either
case, the cable shall be connected to
the antenna system, installed parallel
to the mast, and secured by taping or
similar means every two feet along the
length of the mast. The side of the bottom
end of the cable also shall be secured
to the mast.
(3) The antenna-mast system shall be
mounted in the pivot fixture. The pivot
fixture shall be adjusted so that the
point of impact between the antenna
and the power line takes place at any
desired point within the antenna's protection
zone. The antenna-mast system
shall then be erected to a position of up
to 5? from the vertical, leaning toward
the simulated power line (see Figure 4).
The antenna-mast system shall then be
released and allowed to fall against the

power line. The test may be performed with different test positions such that the antenna system flexes after impact and slides off the power line and or so that it remains in contact with the power line for 5.0 minutes. Current flow from the antenna-mast system to ground shall be monitored and recorded for each test.

(f) Interpretation of Results. An antenna shall pass the Insulating Material Effectiveness Test or the Antenna-Mast System Test if no electrical breakdown occurs and if no current reading exceeds 5 mA rms.

§ 1204.5 Manufacturer's instructions.

(a) For all antennas covered under this part 1204, the following statement shall be included in the manufacturer's instructions, in addition to the material required by 16 CFR 1402.4(a)(1)(ii):

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00243 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

Under some conditions, this antenna may not prevent electrocution. Users should keep antenna away from any overhead wires. If antenna contacts a power line, any initial protection could fail at any time. IF ANTENNA NEARS ANY OVERHEAD WIRES,

IMMEDIATELY LET GO, STAY AWAY, AND
CALL UTILITY COMPANY.
(b) This warning statement shall be
in a separate paragraph immediately
following the warning statement required
by 16 CFR 1402.4(a)(1)(ii)(A).
(c) This warning statement shall be
legible and conspicuous and shall be in
type that is at least as large as the
largest type used on the remainder of
the page, with the exception of the logo
and any identification of the manufacturer,
brand, model, or similar designations,
and that is preferably no smaller
than 10 point type.
• 1204.6 Findings.
As required by section 9 (b) and (c) of
the Consumer Product Safety Act, 15
U.S.C. 2058 (b) and (c), the Commission
makes the following findings:
(a) The degree and nature of the risk of
injury the rule is designed to reduce. (1)
The rule addresses the risk of injury or
death caused by electric shock
occuring when the antenna comes into
contact with electrical power lines
while the antenna is being put up or
taken down.
(2) About 175 fatalities were estimated
to be associated with
omnidirectional CB antennas in 1976.

The estimated number of fatalities declined to about 125 in 1977 and to about 55 in 1978. Since then, the number of fatalities appears to have leveled off at about 45-50 each year. In addition to the 45-50 deaths, it is estimated that a somewhat greater number of injuries occur annually and that about half of them are serious enough to require surgery, amputation, skin grafts, etc. It is common for multiple deaths or injuries to occur in a single accident.

(3) The Commission's staff has estimated that since 1979 about 20 percent of the accidents involved antennas less than a year old, resulting in about 8 deaths in 1980.

(4) Since a substantial portion of the accidents associated with these antennas occur when the antenna is being taken down after it has been installed in an outdoor environment for a number of years, the standard recommends that materials selected to provide protection from shock be weather resistant.

(5) The standard specifies that protection shall be provided against voltages of 14,500 volts phase-toground. Voltages of this level or less are involved in 98 percent of the accidents and 95 percent of the total circuit

mileage of distribution circuits.

(b) The approximate number of consumer products, or types or classes thereof, subject to the rule. (1) The standard applies to omnidirectional CB base station antennas. The Commission estimates that there were approximately 5 million omnidirectional base station antennas in use in 1981, and at that time as many as 75,000 of these antennas were expected to be sold each year for the next several years.

(2) [Reserved]

(c)(1) The need of the public for the consumer products subject to the rule. Omnidirectional CB base station antennas are used in non-mobile applications to obtain essentially uniform receiving and transmitting capabilities in all directions simultaneously. Although directional antennas can obtain greater reception and transmitting capabilities in one or more directions than can omnidirectionals, directionals are generally more expensive and must be oriented so that they point in the desired direction. Therefore, omnidirectional antennas are preferred by many base station operators, and they can also be used in conjunction with a directional antenna to locate

another station to which the directional

antenna can then be oriented.

(2) CB stations are used by individuals

as a communications device for

both practical and personal enjoyment

purposes. Some operators volunteer to

monitor the commonly used and/or

emergency channels for distress calls

and summon aid where appropriate,

relay messages, and aid local authorities

and motorists in monitoring traffic

conditions and accidents.

(3) Although operators can fabricate

their own antennas, and antennas

made for other purposes can be adapted

for CB use, for most operators there is

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00244 Fmt
8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

no adequate substitute for the commercial

CB base station antennas subject

to this rule.

(d) The probable effect of the rule upon

the utility, cost, and availability of the

product-(1) Utility. Tests performed for

the Commission have shown that an

external layer of insulation that will

enable the antenna to comply with this

standard can be provided that will have

no significant effect on the performance

of the antenna that cannot be compensated for by minor changes in the antenna. It is also likely that an insulated antenna's useful life would be somewhat longer than that of an uninsulated antenna. To the extent that manufacturers minimize the number of antenna elements in the protection zone, antennas should become less complex and bulky, and installation may also be eased. This may tend to make installation and removal of the antenna somewhat safer as well. If the isolation technique were used to comply with the standard, there should be no effect on the performance of the antenna.

(2) Cost. For the simpler designs of omnidirectional CB base station antennas, the manufacturers' production costs will be increased by approximately 20 percent, or $4 per antenna. For a few models, the production cost increase could be as much as 50 percent. Some models of antennas for which cost increases could be expected to be substantially greater will likely be discontinued. Some manufacturers already make antennas that either comply with the standard or can be made to do so with changes that involve no significant cost increases. The

average rise in retail prices due to the
standard is expected to be from 20 percent,
or about $10 per antenna.
(3) Availability. The 30 or more different
models of omnidirectional CB
base station antennas available to consumers
in 1981 are expected to be reduced
in number substantially, perhaps
by as much as half, after product line
changes are made to meet the standard.
The difference among some of the
models likely to be discontinued are
small (often relating only to primarily
cosmetic features that provide a certain
degree of product differentiation
but do not significantly affect performance).
Changes in product lines may be
discernible to some consumers, however,
since different brands and models
of antennas will tend to look more
alike (i.e., without upper radials,
''hats'' or other physical appendages
previously incorporated). The availability
of replacement components for
older antennas may also be restricted
somewhat if new, complying components
are not compatible with some
older models. Production of complying
antennas is expected to be sufficient to
satisfy demand; no overall ''shortage''
of antennas is anticipated as a result of

the standard. Sales will, instead, shift from relatively low levels for each of many models to relatively higher levels for fewer models.

(e) Means of achieving the objective of the order while minimizing adverse effects on competition or disruption or dislocation of manufacturing and other commercial practices consistent with the public health and safety. (1) The standard may have significant adverse effects on competition among antenna producers. The additional costs associated with the standard, coupled with the recent history of decreasing sales, may cause a number of manufacturers, including one or two of the major producers, to abandon production of omnidirectional CB base station antennas. The standard is likely to impact most heavily on smaller manufacturers, which may have smaller and fewer capital sources from which to draw funds for product design and production changes and for product testing.

(2) Concentration of sales among the two largest manufacturers will probably increase as a result of the standard. However, the shrinking size of the market itself may prompt some major firms to drop this product line. Companies

currently making antennas that

substantially comply with the standard

will probably gain a significant shortrun

competitive advantage over other

producers whose products do not already

comply with the standard's basic

provisions.

(3) Compliance with the standard

may be relatively more burdensome for

the smaller firms in the producing industry.

Several small firms which entered

the market in the early- and mid-

1970's have already left the market due

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00245 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

to the overall decrease in demand for

the product. Those that remain account

for less than 10 percent of annual

unit shipments. None of these small

firms is expected to go out of business

as a result of issuance of the standard

because most also produce directional

CB and other base and mobile communications

antennas and equipment.

However, the Commission anticipates

that most of these small firms will

probably discontinue omnidirectional

CB base station antenna production, at

least temporarily, until a supplier of

complying components is found, or
until a decision can be made about
long-term prospects.
(4) In order to minimize the adverse
effects on competition and manufacturing
and other commercial practices,
the standard is a performance standard
defined in terms of the factors the
Commission determined to be significant
for the protection of consumers.
Thus, manufacturers have a maximum
degree of flexibility in how to meet the
standard, since the standard does not
specify how the protection performance
is to be obtained.
(5) The Commission also considered
alternative technical approaches to reducing
or eliminating unreasonable
risks of injury associated with
omnidirectional CB base station antennas,
including incorporation of provisions
in the standard which would
allow the antenna to meet its requirements
by grounding. The Commission
rejected this approach because of the
absence of any practical means for a
consumer to ensure that the ground
system will be adequate to dissipate
the large amounts of power involved in
a powerline contact accident. Additionally,
the Commission considered the

possibility that the standard might require CB base station antennas to incorporate a device to sense the electromagnetic field of a powerline. The Commission rejected this alternative because of the cost involved in such an approach, and because consumers could install an antenna even though the presence of a powerline is indicated.

(6) The Commission considered making the provisions of the standard less stringent and eliminating requirements applicable to the antenna's feed cable, in order to lessen the adverse impact of the standard on competition and manufacturing practices. However, it was determined that such changes to the standard would reduce the effectiveness of the standard and thus were not consistent with the public health and safety. Furthermore, these changes would not significantly reduce the adverse effects on competition and manufacturing practices. The elimination of requirements applicable to the feed cable would, with known technology, result in almost completely negating the benefits of the standard and is thus not consistent with the public health and safety.

(7) The Commission also considered

the possibility of issuing the requirements of the standard as a voluntary test method rather than as a mandatory standard. The Commission estimated that if the provisions of the standard were issued as a voluntary test method, the total cost of such a voluntary test method to consumers during the first year after issuance would be about 30 percent of the total cost to consumers expected to result from promulgation of a mandatory standard. However, the Commission estimated that a voluntary test method would prevent only about 25 percent of the deaths and injuries which may be avoided by issuance of a mandatory standard. The Commission declined to issue the provisions of the standard as a voluntary test method because it concluded that such an approach would not only prevent fewer deaths and injuries each year than a mandatory standard, but would also have a less favorable ratio of benefits to costs than a mandatory standard.

(8) The Commission also considered the possibility of undertaking a joint effort with a trade association to inform all users of CB antennas of the dangers which can result from contact

with overhead powerlines as an alternative

to issuance of a mandatory

standard. The Commission observed

that this alternative would have a relatively

small economic impact on the

industry. The Commission also observed

that extensive efforts to promote

public awareness of the dangers

of contacting overhead powerlines have

been conducted in the past by the Commission,

antenna manufacturers, and

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00246 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

1 The Commission believes that, in the area

of consumer product safety, it is not generally

necessary or appropriate to assign a

specific monetary value to human life. However,

several studies on the costs of injuries

and deaths have been conducted in recent

years. Value-of-life estimates based on discounted

future earnings and the willingnessto-

pay approach range from about $200,000 to

about $3 million. The estimated costs of the

CB antenna standard per life saved fall below

or within the range suggested by these

value-of-life estimating methodologies.

utility companies, and that electrocutions

and serious injuries continue

to occur during installation and removal

of CB base station antennas. For
this reason, the Commission concluded
that a public information campaign
would prevent fewer deaths and injuries
than issuance of a mandatory
standard, and rejected such a campaign
as an alternative to issuance of the
standard.
(f) The rule, including its effective date,
is reasonably necessary to eliminate or reduce
an unreasonable risk of injury associated
with the product. (1) The provisions
of the standard constitute a related
system of performance parameters
which are needed as a group to
ensure that the performance of new antennas
will provide the degree of safety
which the Commission has determined
is reasonably necessary. Minor changes
in the value of each parameter would
not significantly reduce the costs of
the standard, although in some cases
they could substantially reduce the
standard's effectiveness.
(2) The Commission estimates that
increased retail prices due to the
standard will cost consumers up to
about $750,000 per year. The Commission
also estimates that the standard
will prevent approximately 8 deaths
and 8 or more injuries during the first

year the standard is in effect. Thus, if the standard saves 8 lives per year, the cost of the standard will be about $94,000 for each life saved. 1

(3) As to the benefits from reduced injuries, the Commission estimates that, if 8 injuries are prevented during the first year the standard is in effect, the actual costs saved by the accidents prevented by the standard will amount to up to $21,000 to $37,000, exclusive of pain, suffering, or disability. If a monetary factor for these less quantifiable components is included, annual injury reduction benefits could be about $288,000 to $1,680,000.

(4) The effective date of the standard was selected after balancing the increased costs to manufacturers and consumers that are associated with shorter effective dates against the benefits to the public that would be caused by having the effective date as soon as possible.

(5) The requirement for the cautionary statement in the instructions for the antenna is intended to ensure the effectiveness of the standard by discouraging any relaxation of present safety practices involving staying away from powerlines. Since instructions

for this product are already required by 16 CFR part 1402, the additional statement should have little or no adverse economic impact.

(6) After considering the costs and benefits associated with the standard, the Commission concludes that the standard, including its effective date, is reasonably necessary to eliminate or reduce an unreasonable risk of electric shock injury associated with omnidirectional CB base station antennas and that promulgation of the rule is in the public interest.

Subpart B-Certification

1204.11 General.

Section 14(a) of the Consumer Product Safety Act (''the act''), 15 U.S.C. 2063(a), requires each manufacturer, private labeler, or importer of a product which is subject to a Consumer Product Safety Standard and which is distributed in commerce to issue a certificate of compliance with the applicable standard and to base that certificate upon a test of each item or upon a reasonable testing program. The purpose of this subpart B of part 1204 is to establish requirements that manufacturers and importers must follow to certify that their products comply with

the Safety Standard for

Omnidirectional CB base Station Antennas

(16 CFR part 1204, subpart A).

Private labelers of CB antennas subject

to the standard need not issue a certificate

of compliance if they have been

furnished a certificate issued by the

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00247 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

manufacturer or importer of the antennas.

This subpart B describes the minimum

features of a reasonable testing

program and includes requirements for

recordkeeping.

§ 1204.12 Definitions.

In addition to the definitions set

forth in section 3 of the act, and in

§ 1204.2 of the standard, the following

definitions shall apply to this subpart

B of part 1204:

(a) Private labeler means an owner of

a brand or trademark which is used on

the label of a CB antenna subject to

the standard, which bears a private

label as defined in section 3(a)(7) of the

act, 15 U.S.C. 2052(a)(7).

(b) Production interval means a period

of time determined by the manufacturer

or importer that is appropriate

for conducting a test on one or more samples of the CB antennas produced during that period in order to provide a high degree of assurance that all of the products manufactured during that period meet the requirements of the standard. An appropriate production interval may vary depending on the construction of the antenna, the likelihood of variations in the production process, and the severity of the test that is used. The time period for a production interval shall be short enough to provide a high degree of assurance that if the samples selected for testing pass the test, all other CB antennas produced during the period will meet the standard.

§ 1204.13 Certificate of compliance.

(a) The manufacturer or importer of any product subject to the standard must issue the certificate of compliance required by section 14(a) of the act. If the testing required by this subpart B of part 1204 has been performed by or for the foreign manufacturer of a product, the importer may rely on such tests to support the certificate of compliance if the importer is a resident of the United States or has a resident agent in the U.S., and the records are

maintained in the U.S. The importer is
responsible for ensuring that the foreign
manufacturer's records show that
all testing used to support the certificate
of compliance has been performed
properly with passing or acceptable results
and that the records provide a
reasonable assurance that all antennas
imported comply with the standard.
(b) A certificate of compliance must
accompany each product or otherwise
be furnished to any distributor or retailer
to whom the product is delivered
by the manufacturer or importer.
(c) The certificate shall state:
(1) That the product ''complies with
all applicable consumer product safety
standards (16 CFR part 1204)'',
(2) The name and address of the manufacturer
or importer issuing the certificate,
and
(3) The date of manufacture and, if
different from the address in paragraph
(c)(2) of this section, the place of manufacture.

§ 1204.14 Certification tests.

(a) General. As explained in § 1204.11
of this subpart, certificates of compliance
required by section 14(a) of the
act must be based on either a test of
each item or on a reasonable testing
program.

(b) Tests of each item. If the certificate is based on tests of each item, the tests may be either those prescribed by the standard or any other test procedure that will determine that the item tested will comply with the standard.

(c) Reasonable testing programs-(1) Requirements. (i) A reasonable testing program for a particular model of CB antennas is one which demonstrates with a high degree of assurance that all the antennas of that model will meet all requirements of the standard. Manufacturers and importers shall determine the types and frequency of testing for their own reasonable testing programs. A reasonable testing program which does not test each item produced should be sufficiently stringent that any variations in production, etc., over the production interval would not cause any antenna to fail if tested according to the requirements of the standard.

(ii) All reasonable testing programs shall include qualification tests, which must be performed on one or more samples of the CB antennas representative of each model produced, or to be produced, to demonstrate that the product is capable of passing the tests prescribed

by the standard and shall also

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00248 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

249

Consumer Product Safety Commission § 1204.17

include production tests, which must

be performed during appropriate production

intervals as long as the product

is being manufactured.

(iii) Corrective action and/or additional

testing must be performed whenever

certification tests of samples of

the product give results that do not

provide a high degree of assurance that

all antennas manufactured during the

applicable production interval will pass

the tests of the standard.

(2) Testing by third parties. At the option

of the manufacturer or importer,

some or all of the testing of each item

or of the reasonable testing program

may be performed by a commercial

testing laboratory or other third party.

However, the manufacturer or importer

is responsible for ensuring that all certification

testing has been properly

performed with passing or acceptable

results and for maintaining all records

of such tests in accordance with

§ 1204.17 of this subpart.

§ 1204.15 Qualification testing.

(a) Testing. Before any manufacturer or importer of CB antennas which are subject to the standard distributes them in commerce, one or more samples of each model shall be tested to determine that all such antennas manufactured after the effective date of the standard will comply with the standard. The type of tests and the manner of selecting samples shall be determined by the manufacturer or importer to provide a reasonable assurance that all antennas subject to the standard will comply with the standard. Any or all of the qualification testing required by this paragraph may be performed before the effective date of the standard.

(b) Product modifications. If any changes are made to a product, after initial qualification testing, that could affect the ability of the product to meet the requirements of the standard, additional qualification tests must be made before the changed antennas are manufactured for sale or distributed in commerce.

§ 1204.16 Production testing.

(a) General. Manufacturers and importers shall test antennas subject to the standard periodically as they are manufactured, to demonstrate that the

antennas meet the requirements of the standard.

(b) Types and frequency of testing. Manufacturers and importers shall determine the types of tests for production testing. Each production test shall be conducted at a production interval short enough to provide a high degree of assurance that, if the samples selected for testing pass the production tests, all other antennas produced during the interval will meet the standard.

(c) Test failure-(1) Sale of antennas. If any test yields results which do not indicate that all antennas manufactured during the production interval will meet the standard, production must cease and the faulty manufacturing process or design must be corrected. In addition, products manufactured before the appropriate corrective action is taken may not be distributed in commerce unless they meet the standard. It may be necessary to modify the antennas or perform additional tests to ensure that only complying antennas are distributed in commerce. Antennas which are subject to the standard but do not comply with the requirements of the standard cannot be offered for sale, distributed in commerce, or imported

in the United States.

(2) Corrective actions. When any production test fails to provide a high degree of assurance that all antennas comply with the standard, corrective action must be taken. Corrective action may include changes in the manufacturing and/or assembly process, equipment adjustment, repair or replacement, or other action deemed appropriate by the manufacturer or importer to achieve passing production test results.

§ 1204.17 Records.

Each manufacturer or importer of CB antennas subject to the standard shall maintain the following records, which shall be maintained for 3 years after the creation of the records and shall be available to any designated officer or employee of the Commission in accordance with section 16(b) of the Consumer Product Safety Act (15 U.S.C. 2065(b)):

(a) Records of the qualification and production testing required by this subpart B, including a description of

VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00249 Fmt 8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T

the types of tests conducted, the dates

and results of the tests, and the production

interval selected for the performance

of the production testing.

(b) Records of all corrective actions

taken, including the specific actions

taken to improve the design or manufacture

and to correct any noncomplying

antenna produced during the period,

the date the action was taken,

and the test failure which necessitated

the action.

(Information collection requirements contained

in paragraph (a) were approved by the

Office of Management and Budget under control

number 3041-0006)

According to the map, those milemarkers are just outside of houston texas on
I-10, on either side.
During the summer, you'll hear skip out of the south and west constantly.

So? I had a dialup connection with a company based out of chicago.
I live in wisconsin.
If you have an account with msn, aol, prodigy, or even supernews, would you
know which areaa they post from?
roadrunner makes it easy though.
You're posting through newsreader.com, so that means you are where they are
right?

Wire up a relay in a small box and connect the relay to the power.
Use a switch on the ground side of the relay to cut power.
Then fuse the output side.

Look, ALLSTEEL77, I have no problem with AM, nor you but...
Not everyone who disagrees with yours and Jeff's idea of optimum radio
tuning is a no-coder or anti-AM'er.

Probably.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Connect coax to radio. Unspool enough to reach the antenna.
Unroll about 3 more feet. Connect to antenna. Adjust
antenna for SWR of 1.5:1 or about. When there on operating
frequency, pack tools and get off roof before you burn!

>From: JJ radiobuff0@mailcity.net
>And ozark333 has very little knowledge.
First off, Kiss My Ass JJ.....
Second. Reactance is what trimming the coax will affect. I got a little carried away with the post, shame on me. However, LENGTH OF COAX DOES MATTER. Otherwise why not use 26 ft or 32 ft or or 27 a multiple of 3......
There are a number of factors that can lead you to the best antenna setup. And opinions on how to vary. My experience and info I have received says that on 27 MHZ using RG-8 mini or if you must RG-58 the correct length will be around 14.5 ft to obtain the best combo of reactance to make the radio and antenna match. Yes I'm no expert, I'm still learning and getting the science down. Even the so called experts have a variety of opinions on how the radio/coax/antenna setup relate. I even had a bigtime radio-tech tell me 14 ft from the radio to the amp then 14 ft from the amp to the antenna...OK...kinda had to wonder about that advice. If you dont believe the math, try it. See what happens. 15 ft of RG-8 mini is maybe $5.00......whoopie....see what your SWR looks like then come back and bitch. We all know Aaron(ious) has never connected a radio and or tuned an antenna so any comments from his peanut gallery carry no merit....so sorry for my error...the dilemma continues...
Miny Me....take a shut up break.

But the formula is rather simle:

1.2 X the length to connect the transmitter and antenna. .900 X can also be used, but expect substandard results.

> CB.
> Here, they enacted laws to protect idiots from themselves. Since that
> time, better idiots have been made.

Yep, some of the cheapest homebase antennas are:
Dipole - about £10
1/2 wave - about £18
5/8 wave - about £20.

But, if you but one of those cheap 1/2 or 5/8 wave antennas you should not expect it to last long. The first strong breeze will bend it, and they soon break.
UK CBers have always seemed to want things as cheap as possible, although the dipoles seem last much better for a cheap antenna.

We can still get metal antennas and I have never heard any suggestion of any planned ban.

Regards,

Peter.

Wrong answer. They are illegal to "import and market". That's a single
phrase. They are legally sold from private party to private party.

And George, why are you answering for Aanal Aaron?

27.555 is also home channel for the Old Timers, or at least used to be. I would like to believe they found another frequency to avoid all the jamming and music-playing but I don't know for sure.

4608. 10 meter radios - the final word

Newsgroup: rec.radio.cb
Date: 2002-08-21 13:56:23 UTC
From: Tom Sevart <n2uhcNOSPAM@yahoo.com>
Message-ID: <ak062n$1eo9bb$1@ID-52518.news.dfncis.de>
Source record: 133635

Hi all,

I still hadn't gotten a response from Ray Laforge at the FCC lab to my email questioning whether or not certain 10 meter radios are legal for use & sale by hams, so I decided to call him this morning. Here's what he said.

10 meter radios are completely legal for use by licensed amateurs on the 10 meter band. They are only illegal for import and marketing.

He stated that he wouldn't put it in writing that a private sale of a 10 meter radio is legal, but if it's used by a licensed amateur operator on 10 meters, nobody is going to know and the FCC won't do anything about it .

The end.

If you want the truth, go to the source.

Tom

The key in all of this is having that license. You can build, sell and trade
all the radios you want.
But if you do not have the proper authority to use it, you pay a fine.

Those illegal radios, the ones that are overpowered, and easily convertible
to 11 meters, are the ones that make use on 11 meters illegal.
Likewise, transmitting on an unauthorized frequency gets you in trouble.

At various ham fests, you'll find radios of all kinds for sale. Nothing
prevents you from having a radio capable of transmitting on police
frequencies. But if you do it, you'll soon find out just how illegal it is.

If you know radio electronics good enough, you can build your own radio. If
it transmits on ham frequencies, you still need a license to do so. And the
proper type of license for that frequency.
You can build your own CB radio if you want. But you couldn't market it
unless it was type acceptable.

Possesion of "illegal radios" is not so much illegal. It is how you use them
that makes them illegal.

Just like anything else, it is how you use it that makes it illegal.

4615. Re: length of coax for SWR not important

It won't affect the real operating SWR of the antenna/cable system, but
cable length will affect your ability to accurately measure the SWR.

http://www.wenzel.com/documents/swr.html

However, you are correct also. Once the system is tuned, keep the cable
as short as possible to minimize power loss UNLESS the cable is designed
to function as a counterpoise element for the antenna.

The Handyman and the Rabbi

A handyman working for a Shul in Allentown, PA
asked for a raise and was turned down.
He decided to quit and went out to look for work.

First he went to a Catholic church and was told
that in order to work there he would have to
answer one question. The priest asked,
"Where was Jesus born?" The man answered,
"Pittsburgh," and was thrown out.

He then went to a Baptist church. The minister
told him that in order to get a job there he would
have to answer a question. He was asked,
"Where was Jesus born?" The man answered,
"Philadelphia." He was tossed out.

Walking away he met the rabbi who was looking for
him.
The rabbi exclaimed, "The board approved your
raise. Please come back immediately."
The man said to the rabbi, "I will come back only
if you answer a question. "Where was Jesus born?"
The rabbi says, "Bethlehem."

"Darn," cries the man. "I knew it was somewhere in
Pennsylvania."

Source record: 133643

An older lady was somewhat lonely, and decided that she needed a pet to keep her company.

So off to the pet shop she went. Forlornly, she searched. Nothing seemed to catch her interest,
except this one ugly frog. As she walked by the barrel he was in, he looked up and winked at
her!

He whispered, "I'm lonely too, buy me and you won't be sorry."

The old Lady figured, what the heck, as she hadn't found anything else.

So, she bought the frog and went to her car.

Driving down the road the frog whispered to her, "Kiss me, you won't be sorry." So, the old
lady figured what the heck, and kissed the frog.

Immediately the frog turned into an absolutely gorgeous, sexy, handsome, young prince.

Then the prince kissed her back, and you know what the old lady turned into?

Come on, guess.....

The first motel she could find.

(She's old, not dead!)

The curling part on the cord went right to the mic head--I thought
some straight cord should be @ the head like other bics, but this one
has the curl go right to the head of it.

I also have a Shakesphere 388 CB boat antenna in it too, NOS !

Get a JOB so you can afford more than $1 !

WHAT a bunch of bureaucratic insurance industry DRIVVEL ! What it
doesn't say is that THIS nonsence is bacause of Lawywers, Judges and
the insurance companies came up with BECAUSE of DRUNKS & DRUGGIES in
the 70's that WERE stoned whjen they put up their metal ground plane
CB antennas & got killed because of THEIR own SIN. Now we have to
suffer with OVER PRICED big stick JUNK ! (BIG STICK PRICES WENT UP A
lot MORE THAN $10 !
Dave!!

>ï¿½ 1204.6 Findings.
>
>As required by section 9 (b) and (c) of
>
>the Consumer Product Safety Act, 15
>
>U.S.C. 2058 (b) and (c), the Commission
>
>makes the following findings:
>
>(a) The degree and nature of the risk of
>
>injury the rule is designed to reduce. (1)
>
>The rule addresses the risk of injury or
>
>death caused by electric shock
>
>occuring when the antenna comes into
>
>contact with electrical power lines
>
>while the antenna is being put up or
>
>taken down.
>
>(2) About 175 fatalities were estimated
>
>to be associated with
>

>omnidirectional CB antennas in 1976.
>
>The estimated number of fatalities declined
>
>to about 125 in 1977 and to about
>
>55 in 1978. Since then, the number of fatalities
>
>appears to have leveled off at
>
>about 45-50 each year. In addition to
>
>the 45-50 deaths, it is estimated that a
>
>somewhat greater number of injuries
>
>occur annually and that about half of
>
>them are serious enough to require surgery,
>
>amputation, skin grafts, etc. It is
>
>common for multiple deaths or injuries
>
>to occur in a single accident.
>
>(3) The Commission's staff has estimated
>
>that since 1979 about 20 percent
>
>of the accidents involved antennas less
>
>than a year old, resulting in about 8
>
>deaths in 1980.
>
>(4) Since a substantial portion of the
>
>accidents associated with these antennas
>
>occur when the antenna is being
>
>taken down after it has been installed
>
>in an outdoor environment for a number
>
>of years, the standard recommends
>
>that materials selected to provide protection
>

>from shock be weather resistant.
>
>(5) The standard specifies that protection
>
>shall be provided against
>
>voltages of 14,500 volts phase-toground.
>
>Voltages of this level or less
>
>are involved in 98 percent of the accidents
>
>and 95 percent of the total circuit
>
>mileage of distribution circuits.
>
>(b) The approximate number of consumer
>
>products, or types or classes thereof,
>
>subject to the rule. (1) The standard
>
>applies to omnidirectional CB base station
>
>antennas. The Commission estimates
>
>that there were approximately 5
>
>million omnidirectional base station
>
>antennas in use in 1981, and at that
>
>time as many as 75,000 of these antennas
>
>were expected to be sold each year
>
>for the next several years.
>
>(2) [Reserved]
>
>(c)(1) The need of the public for the
>
>consumer products subject to the rule.
>
>Omnidirectional CB base station antennas
>
>are used in non-mobile applications
>
>to obtain essentially uniform receiving
>

>and transmitting capabilities
>
>in all directions simultaneously. Although
>
>directional antennas can obtain
>
>greater reception and transmitting capabilities
>
>in one or more directions
>
>than can omnidirectionals, directionals
>
>are generally more expensive and must
>
>be oriented so that they point in the
>
>desired direction. Therefore,
>
>omnidirectional antennas are preferred
>
>by many base station operators, and
>
>they can also be used in conjunction
>
>with a directional antenna to locate
>
>another station to which the directional
>
>antenna can then be oriented.
>
>(2) CB stations are used by individuals
>
>as a communications device for
>
>both practical and personal enjoyment
>
>purposes. Some operators volunteer to
>
>monitor the commonly used and/or
>
>emergency channels for distress calls
>
>and summon aid where appropriate,
>
>relay messages, and aid local authorities
>
>and motorists in monitoring traffic
>
>conditions and accidents.
>

>(3) Although operators can fabricate
>
>their own antennas, and antennas
>
>made for other purposes can be adapted
>
>for CB use, for most operators there is
>

>
>245
>
>Consumer Product Safety Commission ï¿½ 1204.6
>
>no adequate substitute for the commercial
>
>CB base station antennas subject
>
>to this rule.
>
>(d) The probable effect of the rule upon
>
>the utility, cost, and availability of the
>
>product-(1) Utility. Tests performed for
>
>the Commission have shown that an
>
>external layer of insulation that will
>
>enable the antenna to comply with this
>
>standard can be provided that will have
>
>no significant effect on the performance
>
>of the antenna that cannot be
>
>compensated for by minor changes in
>
>the antenna. It is also likely that an
>
>insulated antenna's useful life would be
>
>somewhat longer than that of an
>
>uninsulated antenna. To the extent
>
>that manufacturers minimize the number

>
>of antenna elements in the protection
>
>zone, antennas should become less
>
>complex and bulky, and installation
>
>may also be eased. This may tend to
>
>make installation and removal of the
>
>antenna somewhat safer as well. If the
>
>isolation technique were used to comply
>
>with the standard, there should be
>
>no effect on the performance of the antenna.
>
>(2) Cost. For the simpler designs of
>
>omnidirectional CB base station antennas,
>
>the manufacturers' production
>
>costs will be increased by approximately
>
>20 percent, or $4 per antenna.
>
>For a few models, the production cost
>
>increase could be as much as 50 percent.
>
>Some models of antennas for
>
>which cost increases could be expected
>
>to be substantially greater will likely
>
>be discontinued. Some manufacturers
>
>already make antennas that either
>
>comply with the standard or can be
>
>made to do so with changes that involve
>
>no significant cost increases. The
>
>average rise in retail prices due to the

>
>standard is expected to be from 20 percent,
>
>or about $10 per antenna.
>
>(3) Availability. The 30 or more different
>
>models of omnidirectional CB
>
>base station antennas available to consumers
>
>in 1981 are expected to be reduced
>
>in number substantially, perhaps
>
>by as much as half, after product line
>
>changes are made to meet the standard.
>
>The difference among some of the
>
>models likely to be discontinued are
>
>small (often relating only to primarily
>
>cosmetic features that provide a certain
>
>degree of product differentiation
>
>but do not significantly affect performance).
>
>Changes in product lines may be
>
>discernible to some consumers, however,
>
>since different brands and models
>
>of antennas will tend to look more
>
>alike (i.e., without upper radials,
>
>''hats'' or other physical appendages
>
>previously incorporated). The availability
>
>of replacement components for
>
>older antennas may also be restricted
>
>somewhat if new, complying components

>
>are not compatible with some
>
>older models. Production of complying
>
>antennas is expected to be sufficient to
>
>satisfy demand; no overall ''shortage''
>
>of antennas is anticipated as a result of
>
>the standard. Sales will, instead, shift
>
>from relatively low levels for each of
>
>many models to relatively higher levels
>
>for fewer models.
>
>(e) Means of achieving the objective of
>
>the order while minimizing adverse effects
>
>on competition or disruption or dislocation
>
>of manufacturing and other commercial
>
>practices consistent with the public
>
>health and safety. (1) The standard may
>
>have significant adverse effects on
>
>competition among antenna producers.
>
>The additional costs associated with
>
>the standard, coupled with the recent
>
>history of decreasing sales, may cause
>
>a number of manufacturers, including
>
>one or two of the major producers, to
>
>abandon production of omnidirectional
>
>CB base station antennas. The standard
>
>is likely to impact most heavily on

>
>smaller manufacturers, which may
>
>have smaller and fewer capital sources
>
>from which to draw funds for product
>
>design and production changes and for
>
>product testing.
>
>(2) Concentration of sales among the
>
>two largest manufacturers will probably
>
>increase as a result of the standard.
>
>However, the shrinking size of the
>
>market itself may prompt some major
>
>firms to drop this product line. Companies
>
>currently making antennas that
>
>substantially comply with the standard
>
>will probably gain a significant shortrun
>
>competitive advantage over other
>
>producers whose products do not already
>
>comply with the standard's basic
>
>provisions.
>
>(3) Compliance with the standard
>
>may be relatively more burdensome for
>
>the smaller firms in the producing industry.
>
>Several small firms which entered
>
>the market in the early- and mid-
>
>1970's have already left the market due
>
>VerDate 11<MAY>2000 12:11 Feb 07, 2001 Jkt 194049 PO 00000 Frm 00245 Fmt

>8010 Sfmt 8010 Y:\SGML\194049T.XXX pfrm11 PsN: 194049T
>
>246
>
>16 CFR Ch. II (1-1-01 Edition) ï¿½ 1204.6
>
>to the overall decrease in demand for
>
>the product. Those that remain account
>
>for less than 10 percent of annual
>
>unit shipments. None of these small
>
>firms is expected to go out of business
>
>as a result of issuance of the standard
>
>because most also produce directional
>
>CB and other base and mobile communications
>
>antennas and equipment.
>
>However, the Commission anticipates
>
>that most of these small firms will
>
>probably discontinue omnidirectional
>
>CB base station antenna production, at
>
>least temporarily, until a supplier of
>
>complying components is found, or
>
>until a decision can be made about
>
>long-term prospects.
>
>(4) In order to minimize the adverse
>
>effects on competition and manufacturing
>
>and other commercial practices,
>
>the standard is a performance standard
>
>defined in terms of the factors the
>

>Commission determined to be significant
>
>for the protection of consumers.
>
>Thus, manufacturers have a maximum
>
>degree of flexibility in how to meet the
>
>standard, since the standard does not
>
>specify how the protection performance
>
>is to be obtained.
>
>(5) The Commission also considered
>
>alternative technical approaches to reducing
>
>or eliminating unreasonable
>
>risks of injury associated with
>
>omnidirectional CB base station antennas,
>
>including incorporation of provisions
>
>in the standard which would
>
>allow the antenna to meet its requirements
>
>by grounding. The Commission
>
>rejected this approach because of the
>
>absence of any practical means for a
>
>consumer to ensure that the ground
>
>system will be adequate to dissipate
>
>the large amounts of power involved in
>
>a powerline contact accident. Additionally,
>
>the Commission considered the
>
>possibility that the standard might require
>
>CB base station antennas to incorporate
>

>a device to sense the electromagnetic
>
>field of a powerline. The
>
>Commission rejected this alternative
>
>because of the cost involved in such an
>
>approach, and because consumers could
>
>install an antenna even though the
>
>presence of a powerline is indicated.
>
>(6) The Commission considered making
>
>the provisions of the standard less
>
>stringent and eliminating requirements
>
>applicable to the antenna's feed
>
>cable, in order to lessen the adverse
>
>impact of the standard on competition
>
>and manufacturing practices. However,
>
>it was determined that such changes to
>
>the standard would reduce the effectiveness
>
>of the standard and thus were
>
>not consistent with the public health
>
>and safety. Furthermore, these changes
>
>would not significantly reduce the adverse
>
>effects on competition and manufacturing
>
>practices. The elimination of
>
>requirements applicable to the feed
>
>cable would, with known technology,
>
>result in almost completely negating
>

>the benefits of the standard and is thus
>
>not consistent with the public health
>
>and safety.
>
>(7) The Commission also considered
>
>the possibility of issuing the requirements
>
>of the standard as a voluntary
>
>test method rather than as a mandatory
>
>standard. The Commission estimated
>
>that if the provisions of the
>
>standard were issued as a voluntary
>
>test method, the total cost of such a
>
>voluntary test method to consumers
>
>during the first year after issuance
>
>would be about 30 percent of the total
>
>cost to consumers expected to result
>
>from promulgation of a mandatory
>
>standard. However, the Commission estimated
>
>that a voluntary test method
>
>would prevent only about 25 percent of
>
>the deaths and injuries which may be
>
>avoided by issuance of a mandatory
>
>standard. The Commission declined to
>
>issue the provisions of the standard as
>
>a voluntary test method because it
>
>concluded that such an approach would
>

>not only prevent fewer deaths and injuries
>
>each year than a mandatory standard,
>
>but would also have a less favorable
>
>ratio of benefits to costs than a
>
>mandatory standard.
>
>(8) The Commission also considered
>
>the possibility of undertaking a joint
>
>effort with a trade association to inform
>
>all users of CB antennas of the
>
>dangers which can result from contact
>
>with overhead powerlines as an alternative
>
>to issuance of a mandatory
>
>standard. The Commission observed
>
>that this alternative would have a relatively
>
>small economic impact on the
>
>industry. The Commission also observed
>
>that extensive efforts to promote
>
>public awareness of the dangers
>
>of contacting overhead powerlines have
>
>been conducted in the past by the Commission,
>
>antenna manufacturers, and
>

>Consumer Product Safety Commission ï¿½ 1204.11
>
>1 The Commission believes that, in the area

>
>of consumer product safety, it is not generally
>
>necessary or appropriate to assign a
>
>specific monetary value to human life. However,
>
>several studies on the costs of injuries
>
>and deaths have been conducted in recent
>
>years. Value-of-life estimates based on discounted
>
>future earnings and the willingnessto-
>
>pay approach range from about $200,000 to
>
>about $3 million. The estimated costs of the
>
>CB antenna standard per life saved fall below
>
>or within the range suggested by these
>
>value-of-life estimating methodologies.
>
>utility companies, and that electrocutions
>
>and serious injuries continue
>
>to occur during installation and removal
>
>of CB base station antennas. For
>
>this reason, the Commission concluded
>
>that a public information campaign
>
>would prevent fewer deaths and injuries
>
>than issuance of a mandatory
>
>standard, and rejected such a campaign
>
>as an alternative to issuance of the
>
>standard.
>
>(f) The rule, including its effective date,
>
>is reasonably necessary to eliminate or reduce

>
>an unreasonable risk of injury associated
>
>with the product. (1) The provisions
>
>of the standard constitute a related
>
>system of performance parameters
>
>which are needed as a group to
>
>ensure that the performance of new antennas
>
>will provide the degree of safety
>
>which the Commission has determined
>
>is reasonably necessary. Minor changes
>
>in the value of each parameter would
>
>not significantly reduce the costs of
>
>the standard, although in some cases
>
>they could substantially reduce the
>
>standard's effectiveness.
>
>(2) The Commission estimates that
>
>increased retail prices due to the
>
>standard will cost consumers up to
>
>about $750,000 per year. The Commission
>
>also estimates that the standard
>
>will prevent approximately 8 deaths
>
>and 8 or more injuries during the first
>
>year the standard is in effect. Thus, if
>
>the standard saves 8 lives per year, the
>
>cost of the standard will be about
>
>$94,000 for each life saved. 1

>
>(3) As to the benefits from reduced
>
>injuries, the Commission estimates
>
>that, if 8 injuries are prevented during
>
>the first year the standard is in effect,
>
>the actual costs saved by the accidents
>
>prevented by the standard will amount
>
>to up to $21,000 to $37,000, exclusive of
>
>pain, suffering, or disability. If a monetary
>
>factor for these less quantifiable
>
>components is included, annual injury
>
>reduction benefits could be about
>
>$288,000 to $1,680,000.
>
>(4) The effective date of the standard
>
>was selected after balancing the increased
>
>costs to manufacturers and
>
>consumers that are associated with
>
>shorter effective dates against the benefits
>
>to the public that would be caused
>
>by having the effective date as soon as
>
>possible.
>
>(5) The requirement for the cautionary
>
>statement in the instructions
>
>for the antenna is intended to ensure
>
>the effectiveness of the standard by
>
>discouraging any relaxation of present

>
>safety practices involving staying
>
>away from powerlines. Since instructions
>
>for this product are already required
>
>by 16 CFR part 1402, the additional
>
>statement should have little or
>
>no adverse economic impact.
>
>(6) After considering the costs and
>
>benefits associated with the standard,
>
>the Commission concludes that the
>
>standard, including its effective date,
>
>is reasonably necessary to eliminate or
>
>reduce an unreasonable risk of electric
>
>shock injury associated with
>
>omnidirectional CB base station antennas
>
>and that promulgation of the rule

So can an active legal cber construct a 1kw 27mhz am transmitter just for "testing purposes" and still be in compliance?If "the man" showed up would possession constitute usage?....Mark

Tim I agree that there are problem areas on the amateur bands, take a look at the idiots involved in the flamwar on the amateur usenet groups, it is a continuation of what goes on on some HF freqs. There are good and bad operators in amateur, and on CB. That being said, that still doesn't justify either group doing wrong. For example all of these kidnapping incedents going on in the last few months, seeing these things happen, does that justify someone else doing it? Or the school shootings, does one make another one right?

A long time ago when I came to this group I saw the start of the batle between N8WWM and the rest start, I agree with Doug and his group about legal operations, but at the same time I said I disagreed with his tactics, spam and flooding usenet was disruptive. I have met Doug and talked to him in person several times, he's actually a really decent guy with alot of knowledge that he was willing to share with me regarding antenna design ect.

What I am saying is two wrongs do not make a right (but three lefts do (if you figure this one out let me know heheh)).

Nothing would make me happier than to see this group return to an actual discussion group where we can exchange information on radio operation, problem solving ect. without all the flamefests.

Yes I am a licensed ham, and yes I also enjoy talking on CB, I run legal equipment, when I am on CB I leave my ticket on the wall, when I am on my amateur radio I leave my cb language in the drawer.

I am not better than anyone else, I make mistakes, and will until the day I die. And if you see me make a mistake, let me know, so I don't make it again.

If any of you are ever in the area drop me a line and we can go have a coffee.

Source record: 133701

Well ,its been about a year or so since i joined into the "fray". Its been educational, fun , and never boring here at old rec radio cb. In spite of all the rantings and bullsh-t , im happy to note that nothing has really changed. Voobner and the rest are still sticking to their guns ,as are the Key Klowns, of which im proud to count myself as one of the latter. Most suppliers of Key Klown equipment are still alive and well, and the manufacturers are still improving the hobby with newer,more powerfull radios than ever. Im looking forward with excitement to owning a new galaxy 93-t, and im thinking about upgrading to a texas star 1600 in my mobile unit. This should make for some exciting,and need i add "covert", night time skip shooting this fall ! Im going to be doing my best to give some of the old timers a run for their money. (watch out "MOD SQUAD",here i come) Im also looking forward to renewing my nightly conversations with my good friend "WALKIE TALKIE", down under. He runs a hellacious 7 element beam in Austrailia, and its allways a pleasure to work his station. Well, all we need is for the skip to return with the fall season!!! Its gonna be a blast.....
catch you all later , and looking forward to hearing you on the "band".

> away with the post, shame on me. However, LENGTH OF COAX DOES MATTER. Otherwise
> why not use 26 ft or 32 ft or or 27 a multiple of 3......

Why not, the length does not matter. Use 26.24444 feet or 32.7985
feet or 27.66666 feet, or 67.574 feet, the length does not matter.

> There are a number of factors that can lead you to the best antenna setup. And

> MHZ using RG-8 mini or if you must RG-58 the correct length will be around 14.5
> ft to obtain the best combo of reactance to make the radio and antenna match.

Pure BS, coax length does not matter if you are connecting the
coax to an antenna that has a feedpoint that matches the impedance
of the coax. If the antenna feed point is 52 ohms then any length
of RG-58 will match as the impedance of the coax is 50-52 ohms and
cutting to certain lengths does not change that. Again, length
does not matter.

> Yes I'm no expert, I'm still learning and getting the science down. Even the so

A big-time cb radio tech who propagates the cb myth about coax
length? Again, coax length does not matter, this has been a cb
myth for years.

> If you dont believe the math, try it. See what happens. 15 ft of RG-8
> mini is maybe $5.00......whoopie....see what your SWR looks like then come back
> and bitch.

I have installed lots of antennas and never considered coax length
other than using the amount necessary to get from the radio to the
antenna, and high swr was never a problem. You trim the antenna
for resonance, not the length of the coax. If you trim the coax
length to get a lower swr reading, you are only fooling the swr
meter, the actual swr on the transmission line does not change.
You are right when you say you're no expert.

Kiss your own a**, you're closer to it than I am.

I have met Doug and talked to him in person several times, he's actually a really decent guy with alot of knowledge
<<

(snip)

First of all, with you being here from the beginning when Doug came in here and threatened many, accused many of the most perverted sexual things, talked disgustingly about sexual innuendo, spammed the hell out of the group, made almost every post about "fag" this and 'Suck this" and talked about peoples race, children, wives, all in lewd manners to those who have done nothing to him except correct his lies and teach him some net etiquette.....and to sit here and say you actually MET him, and that he is a nice guy.....well, Keith, you and I certailny have had disagreements before, certainly nothing we couldn't get past, but for someone to even go meet this guy after what he had done and said, certainly gives pause for the cause.
Defending N8.....I've seen it all now. I still have an email from you that you tried to mask when you first appeared (The "Cletus" ping screwed you). I kinda thought you were sympathetic to his assholeness at that time, but wasn't certain...now I am. Wanna see it reposted here so all can enjoy it? How about the one where you claimed you were no nowhere near the county I mentioned in my email when corresponding with city and county officials? I still have that one as well.
With all the shit you talked about morals and civility and decency on the air, would you enjoy your wife or kids getting a boatload of chickenhawk's email?
You yourself have used that analogy
conerning behavior on the air, but you apparently "got past it" wth Doug's antics that are preserved here in the archives for posterity for all to enjoy.
To actually go and meet this guy from what he posts here makes me wonder about you Keith, but that more than likely isn't the scenario,

now is it? The rest of the story doesn't even matter to me....the mere fact that you are here trying to charm us with relegations of whatta good guy N8 is, well,,,kinda speaks for itself.

Good luck, Keith.
I hope your defense of this cancerous lesion to radio doesn't affect your judgement anymore than it already has. At best, when defending such bowel, you may wish to drop your sigs (just a suggestion), as your defense of this plague coupled with a few of his posts sent to the organizations you profess in your sig may damage your credibility a bit more than your simple post way back when you AND Doug were funning around on the board. Don't shoot the messenger, the AKC are the ones that began this tactic, remember? Sending shit to peoples employers, crying to ebay, anything they can to harass innocent cbers that made Doug look like the archaic, confused, eunich he became by his own hand. I believe in returning things t their rightful owners. You have a hell of a way of choosing friends, Keith. Anyone who would hang with this sick bastard I certainly wouldn't want to be depending on during a time of crisis. You wanna defend this slug, do it on a hammie board. He has no fans here, except the ones that were driven underground...plus one.

From: "crossfire" <noone@home.com>
Subject: FS: TS-440S $300.00 W/AT shipped
Date: Wednesday, August 21, 2002 9:48 AM

I have a TS-440S By Kenwood for sale .
Everything works fine with the exception of the ATT. I was told that it was
the relay on the bottom board .
The radio does a full 100 watts out , I have got real good audio reports on
this rig . Auto tuner works great.
Comes with power cord No mic.
$300.00 will get it to Your front door .
email Me at dogyham@hotmail.com

You don't know any more than you did before, Aanal Aaron. I suspect most "unlicensed bootleggers" (sic - that's redundant) use dipoles, same as most amateurs.

The Alpha Delta sloper is a trap antenna, tuned for the international broadcasting bands; it probably would not work very well on 14313 or 3950.

> "Got RF?"

Ozark,

Let's forget our occasional jabs for a minute and permit me, if you will, to present compelling evidence that coax length does not matter. On my mobile, I operate a multi-band HF antenna

that resonates at around 1.2 : 1 SWR from 3.6 MHZ all the way up to 54 MHZ. This is done
mechanically with a motor inside a lower mast that moves the loading coil up or down as needed
within that mast to expose the correct number of coil turns for "tuning". Springy fingers contact
the coil at the top of the mast so that there is electrical and solid contact at all times. Therefore,
tuning is infinite with the press of a switch on the dash, and I can tune up on the extreme ends of
the antenna's range within about 30 seconds all while cruising down the pike. Antenna theory
and the formulas that govern same are the same thru out the spectrum, right? OK, IF coax length
WERE important, then I would have to have 12(??), or more, lengths of coax ranging from over
66 feet down to about 18 feet (according to your theory) in order to get the thing to work. It would get extremely unwieldy to have to have "bookoos" of different cables in a vehicle to operate on all the HF ham bands plus the military, Shares, and FEMA frequencies I am authorized for,
and since the antenna tunes fluidly onto any frequency without detents or indices, it would not work
IF what you say is true! Yet I operate on an infinite number of frequencies, and my coax cable is
about 7 feet long. In my old station wagon, the cables were about 4' long from radio to amp, and
15" from amp to antenna (entire system located in the rear of the car except for control head). In
35 years I have NEVER worried about coax length except if it becomes so long as to create a lossy system. The formula used is: Length= whatever it takes to get from radio to antenna.

The tuning of an antenna system should take place at the ANTENNA. Just for grins and giggles,
I attached a long piece of coax to my antenna, and used an MFJ 259 Analyzer to see if there were
any difference in the readings there and with a length of 4-5 feet. At 3.7, 4.4, 7.2, 7.6, 14.3, and
every band, the readings were the same no matter HOW long the coax was or if the reading was
taken right at the feedpoint. Length does not matter.

Honestly, there are a lot of myths used by unscrupulous dealers (I am not accusing you of this) to
sell unnecessary stuff to CBers, the majority of whom have no electronics experience. For example, High Efficiency (normally) equates to narrow-bandedness, or very sharp tuning. But a lot
of builders know this, too, and deliberately sacrifice a certain amount of efficiency in order to cover
a wide band of frequencies both in and outside of CB. While "some" of the Big Coils look VERY

impressive, they actually don't do what they COULD do without this tampering to force the antenna
to cover more than normal. Getting an antenna that LOOKS like it can squash anything is just as
important as actual performance sales-wise because the dealers know that electronics isn't the average CBers strong suit. That doesn't make CBers "stupid"; they just don't KNOW about such
things and have to rely on sellers' honesty.

This is getting too long already, so if you have rebuttal, I will reply later

First of all I never partook of any of his actions, and his usenet actions upset me as much as anyone else. Look back my posts at that time said as much. I am not defending anyone, like I said people screw up they have to pay for it no matter who they are. If I make a mistake then I pay for it.

As for our email corerespondance, yes I have emailed you on a few occasions, and I remember what it was regarding, I have also emailed Mopar, and Dave. I have talked to others on the phone, I even asked ICECOLD if he would be interested in meeting for a coffee while I was in NYC. I try to treat people the way I would like to be treated, I try not to call anyone names. I will however stand up for my beliefs and my rights, as I feel everyone else should. I may not agree with everyone, like Dave on occasion, or others here, but I respect their rights and their opinions.

I have nothing to hide, thats why my call is there, if anyone wants to look me up and drop by they are welcome. As for what I do with my life and the organizations I volunteer with, again I am proud of what I do, and the wonderful people I have met across the country that enjoy doing the same things. Maybe if more people looked out for their neighbors, and looked to help each other, we wouldn't have the problems we have in this society today.

When I was speaking of Doug I was talking of our conversations regarding radio, not about this group. When he starts talking about the keyclown thing I tend to tune him out.

FYI one of the people you could have verified some of the information regarding the emergency radio interferrence thing died last week from complications from open heart surgery, he was a close friend who I have known since I was a kid, and he had known my family when my grandfather was fire chief in McClure. His name was Fred Reinbolt he was a Deputy Sherrif. I tried to give you contact names from the Departments in the county.

And I will say htis, hams are just as bad if not more when it comes to jamming, if they are not hams then they have ham radios and are jamming, a while back, on Memorial day weekend, SKYWARN was activated here, we were under condition Red, I was out there in it with golf ball sized hail bouncing off my head when I was terying to get in to set up Net Control station for Hnry County, the Lucas County SKYWARN net had to change repeaters 5 times because 2 idiots wanted to play games and jam the repeaters.

Oh and the topic of sending things to people and making phone calls ect. wasn't it chuck who made the threats to Doug? And what about the person/persons who made some calls or sent letters to Franks place of

employment making unfounded comments about him being a child molester that cost him his job?

So it looks to me like both sides of this conflict are guilty of pushing the issue.

Think of me what you want, I have always tried to be civil in my discussions. Unlike others who are on here, I have nothing to hide.

You can support the accuracy of that statement? I doubt it.

The vast majority of CB users are law-abiding people. A small fraction
of those people venture outside the "legal 40" into Freeband, and a
miniscule number stumble into ten meters. Most of the latter are
truckers who have no idea that they're intruding on an amateur band.

MOST Cbers don't use amplifiers; MOST CBers don't use echo boxes; MOST
CBers don't venture out-of-band!

Apparently you can only hear the over-powered, echo using ones. Is
that a bad receiver or really selective listening?

You, sir are woefully misinformed. But you expose your negativity
every time you post, so it comes as no surprise.

If you really want a place where "breaking the law is the rule rather
than the exception", try driving on almost any highway.

>

I have to ask: If you're worried about our "image", why not go after
the high-power licensed broadcasters (like WWCR), who give the world a
wacked out view of America as a bunch of religious nutcases begging
for donations? I'm MUCH more concerned about that image than I am of a
few truckdrivers. Oh, I forgot; they aren't using an unused frequency
in the ten meter band, are they? How about this: What is a domestic US
shortwave broadcaster doing in the TROPICAL bands? This is not a

Tropical nation by any stretch of the definition! But they have a
license, so it's OK to violate ITU Regulations? Hmmmmmm?

Yes, but most AMers adhere to an unspoken gentlemen's agreement that they will occupy only a
small segment, usually near the upper limits of a given phone band. I didn't mean to imply that it
was mandatory.

No I wasn't planning on it, I got 4 tickets I sent you two today, and the other two are for me and an old friend of mine, you'd like him, he likes trucks and loud radios, he has a 102" whip mounted dead center of the toolbox on the back of his truck. his name is Jerry, he works at the Cambell Soup company here in Napoleon and goes by "Country Boy", perhaps you might have heard some of my other friends on the radio in the past, such as "Undertaker, "BOB", Renegade", "JPT =Just Plain Tired", and perhaps you have heard me a time or two, I went by DrummerBoy on AM and ob SSB I was LDO218, LDO = Long Distance Opetators a now defunct SSB club that was running in N.W. Ohio.

I have no problems with you, and do not wish to start any.

>
>
>
> Are the SSBers legal there?

Yes, but I hear people arguing about who was there first, who "peed" on the
fire hydrant first, whose net was there first, yada, yada, yada when there's
no reason to argue. While these stupid,
3rd grader turf wars go on, the adjacent frequencies are totally quiet.
What is the BFD? There's
PLENTY OF room and all that needs to happen is for one group just to move a
few KC away.
SHEEEEESH!! Some of 'em whine about the AMers and deliberately get within
QRMing distance on purpose, and I have to ask why. Some 8 year olds act
more mature than those
clowns..... Bad eggs in every group.

Jerry

If they are, then the right to bitch is

But, as the cycle continues to decline, your "skip" prospects decline with
it. Amp won't help when
the cycle is at the bottom. Cheer up, tho. Things will improve in 2013.

You're correct that coax length does not affect the SWR of the system. But length can certainly affect your ability to measure the SWR of the system accurately IF the swr meter is not located at the transmission point or at the feed point. IE, if you insert an inline SWR meter with coax jumpers, the length of those jumpers will change the SWR indicated on your meter. Use jumpes of 1/2 wavelength to measure SWR with an inline meter, tune your antenna for optimum, then use the shortes coax length possible to feed the antenna.

about it .

Good for you Tom, but hams freedom from type-acceptance rules was
never the issue. What you SHOULD have asked him was...

a) Are the majority of these phoney 10 meter radios being manufactured
and marketed for illegal purposes and used by non-hams? Are radios
like "The General Grant" intended for legitimate amateur use?

b) Haven't the majority of these phoney 10 meter radios actually been
DEFINED as "non-type-accepted CB's" and NOT "ham radios" by the
Commission?

b) Just because a ham could OPERATE a non-type accepted radio does
that mean he may also PURCHASE one from illegal importers and
marketers?

c) Just because a ham could OPERATE a non-type-accepted radio, does
that justify them being marketed to CB'ers at truck stops and in
internet CB Shops?

e) What about all the BS about "export radios"? Are they intended for CB in some other country? If so, what country is it where operation on ham bands is legal for CB'ers?

You and I raised these and other issues in our discussion, Tom. They are questions that deserve answers.

Yet you chose to ask Mr. LaForge an inocuous question --- a question that everyone already knew the answer to -- and no one disputed.

>The end.
>
>If you want the truth, go to the source.

More like "if you want to save face, avoid the difficult questions".

I usually ignore your trolling Richard, but this one made me LOL.
There are probably a half a dozen amateurs monitoring/recording those
frequencies. Amateurs want bad amateurs busted - just as much as
they'd want Tim busted if he was bootlegging on 14.313.

Can someone enlighten me as to why truckers radios sound like shit?

I hear a lot of them that are way over-modulated, have echo, reverb, etc.
Do they knowingly do this?

What is the mentality of sounding like southern trailer trash on the radio?

That was never in dispute. What was in dispute was that the radios listed on the FCC's "Illegal CB transceiver list" are illegal for use on 10 meters by licensed hams. Some even went so far as to state that it is illegal to merely possess them.

Yes, if it's connected to a power source, antenna, etc., it can reasonably be assumed that the radio has been in use. However, if it's up on a shelf in a bedroom closet, it's hard to make the case that it's being used illegally.

>First of all I never partook of any of his actions, and his usenet actions upset me as much as anyone else. Look back my posts at that time said as much. I am not defending anyone, like I said people screw up they have to pay for it no matter who they are. If I make a mistake then I pay for it.
As for our email corerespondance, yes I have emailed you on a few occasions, and I remember what it was regarding, I have also emailed Mopar, and Dave.<<

Plenty of email gets exchanged among this board.

> I have talked to others on the phone, I even asked ICECOLD if he would be interested in meeting for a coffee while I was in NYC. I try to treat people the way I would like to be treated, I try not to call anyone names. <<

Dig it. I haven't seen Dave, Ice, OR Mopar pulling what Dogie did. Have you?

>I will however stand up for my beliefs and my rights, as I feel everyone else should. I may not agree with everyone, like Dave on occasion, or others here, but I respect their rights and their opinions. <<

And your belief that Dogie is a nice guy is
out there, despite the volume of filth he has posted.

>I have nothing to hide, thats why my call is there, if anyone wants to look me up and drop by they are welcome. <<

Cool, then answer the question: If he is such as nice guy, you would have no problem with
your wife or daughter receiving the shit he posted directed toward many of us, hey?,

>As for what I do with my life and the organizations I volunteer with, again I am proud of what I do, and the wonderful people I have met across the country that enjoy doing the same things. Maybe if more people looked out for their neighbors, and looked to help each other, we wouldn't have the problems we have in this society today. <<

Hey,, that's great,,really it is, and I have the utmost respect for React, but when you are using their sigs on your personal time to voice YOUR PERSONAL opinion, it reflects on the organization, whether you realize it or not.
None of the orgs in your sig would support this clown after reading his BS, let alone go to meet this sexual deviant. Bet on it.

>When I was speaking of Doug I was talking of our conversations regarding radio, not about this group. When he starts talking about the keyclown thing I tend to tune him out.
<<

The rest of the world tuned him out as soon as they saw his deviancy. You apparently befriended him.

>FYI one of the people you could have verified some of the information regarding the emergency radio interferrence thing died last week from complications from open heart surgery, he was a close friend who I have known since I was a kid, and he had known my family when my grandfather was fire chief in McClure. His name was Fred Reinbolt he was a Deputy Sherrif. I tried to give you contact names from the Departments in the county.
And I will say htis, hams are just as bad if not more when it comes to jamming, if they are not hams then they have ham radios and are jamming, a while back, on Memorial day weekend, SKYWARN was activated here, we were under condition Red, I was out there in it with golf ball sized hail bouncing off my head when I was terying to get in to set up Net Control station for Hnry County, the Lucas County SKYWARN net had to change repeaters 5 times because 2 idiots wanted to play games and jam the repeaters.
Oh and the topic of sending things to people and making phone calls ect. wasn't it chuck who made the threats to Doug? <<

Let's put in perspective, shall we Keith? You're all hammies in a cb room making THREATS. Let's not forget Lelnad man either, with shooting freebanders in the head and teling me I'm a "dead fish."
Bottom line: Hammie bullshit in a cb room!

>And what about the person/persons who made some calls or sent letters to Franks place of employment making unfounded comments about him being a child molester that cost him his job?<<

What about it? Dogie played that card all over the net, so did "nad. Seeing how you buddied with N8, I can see how you actualy believed Frank worked..... with kids, no less.

>So it looks to me like both sides of this conflict are guilty of pushing the issue. <<

Not even close.
You were here when N8 started his BS and it was returned. Certain hammies think they're big stuff and thought they'd come in here and dazzle us lowly ignorant cbers and we'd kiss their no-code licensed azz, only we didn't lay down and take their BS. Many of us ARE licensed hammies, way beyond these leeches. and corrected them on many issues,,,,,so many to the point they were driven madly underground.

>Think of me what you want, I have always tried to be civil in my discussions. Unlike others who are on here, I have nothing to hide. <<

How about a ton of N8's posts from your wife and daughter?

>73 de Keith
--
KC8TCQ
American Red Cross - Disaster Services
Board Member - Henry County Chapter American Red Cross Health and Safety Services Instructor - Henry County Chapter American Red Cross
Vice President: REACT of Henry County <<

And you do stand for what you believe in Keith, and I respect the hell outta you for what you do....but acting as a Kissinger-type for someone like N8 is not the wisest choice you could have made.

Private sales of 2510s are no different than private sales of a 706's.
They are both legal regardless of having an amateur license or not.

4663. Re: swing question

Jeff,
I agree fully with you. My experience has been that "higher average percentage" of modulation will be heard over a station with a high carrier and "average modulation". I have proved this many times in experimental key-downs with friends where the reciver is the same distance from both parties. Unless the "high carrier" station is employing some sort of speech processor that maintains the 100% modulation, it will usually be not be heard over a station that is swinging highly and already benefits from the "higher average percentage" of modulation. After all, it's the modulation that is heard on the air...

My mobile dead keys at 100mW and swings to 180W(with SkyWave amplifier) RMS...

> never the issue.

Yes it was, see below.

> What you SHOULD have asked him was...

If you're so concerned, you call & ask. This was my phone call, and I asked
the questions I wanted.

> a) Are the majority of these phoney 10 meter radios being manufactured
> and marketed for illegal purposes and used by non-hams? Are radios
> like "The General Grant" intended for legitimate amateur use?

I really don't give a rat's ass about the intended use. My contention was
that they are legal for use on amateur frequencies by licensed hams if they
want to use them there. And they are.

> b) Haven't the majority of these phoney 10 meter radios actually been
> DEFINED as "non-type-accepted CB's" and NOT "ham radios" by the
> Commission?

Once again, it doesn't matter. I can use a modified CB to operate on 10
meters if I wanted to. I can use whatever transceiver I want on the ham
frequencies, no matter what the FCC wants to call it.

> b) Just because a ham could OPERATE a non-type accepted radio does
> that mean he may also PURCHASE one from illegal importers and
> marketers?

No, but he could buy one from an idividual.

> c) Just because a ham could OPERATE a non-type-accepted radio, does
> that justify them being marketed to CB'ers at truck stops and in
> internet CB Shops?

I never said it did. I never disputed that they were illegal for use on CB
frequencies.

> e) What about all the BS about "export radios"? Are they intended for
> CB in some other country? If so, what country is it where operation on
> ham bands is legal for CB'ers?

I don't care about export CB's. My concern is over 10 meter radios. If
you're so concerned about what all the other countries' CB rules are, you do
the research.

> Yet you chose to ask Mr. LaForge an inocuous question --- a question
> that everyone already knew the answer to -- and no one disputed.

Those were the only two questions I cared about. No one disputed? Did you forget making this post?

>Wrong again. See below.

<snip>

Apparently you disputed it. You were adamant that these radios were "illegal" for amateur use, and even went so far as to tell ebay to remove auctions of these kind of radios. Backpedal all you want, but you made the claim that certain 10 meter radios were illegal, period, which they are not.

This is the last I'm going to say on this. The bottom line is:

1. Any radio capable of operating on any ham band (including 10 meters) is legal for use by licensed hams as long as the ham uses it within the limits of his/her license.

2. The FCC won't state so much that a private sale of a 10 meter radio listed on the notice is legal, but as long as it's used legally by a licensed ham, the FCC doesn't care.

That's it. I'm taking the football helmet off now.

Tom

I know what you mean. Perhaps in larger cities the 40 CB channels are
crowded, but where I live they are empty. I can't understand why someone
would want to operate on illegal frequencies when the legal channels are
virtually empty.

FRS radios are handy, but the best effective range I've ever really gotten
out of them was about 1 mile.

Perhaps MURS will become a handy alternative.

Remember auto searches from part 95 rules only apply to CB'ers. A
antenna does not make you a CB'er. Possession does not make you a
CB'er. If you have transmitting equipment in your house and you have
a antenna outside it still is not enough. Other evidence is needed.

Are you "generalizing" or do you have specific knowledge that the model CB28 and the CB50 are the EXACT same antenna except for color? I just wonder why Francis decided to make the CB28 in 3 colors, but name the CB50 "Amazer" and only offer it in one color.

Seems to me there might be some difference, but it could all just be marketing.

The last thread was very informative. What about the Francis whips? They are not tunable. I saw something in their adds about using the correct length of coax. But it did not say how much. This setup will be a bumper mount on a 2 dr Tahoe.

Should I just run the least amount needed?

Thanks,

Steve

Hell, half the time there isn't even any transmitter in the house at
all, even with an antenna up there.

If the antenna manufacturer depends on trimming coax to "tune" (the more
acurate phrase would be
"resonate") the antenna, he is not honest at all. You *may* get some
different readings with different lengths, but I have never even given
length a second thought when installing radios. The
true and accepted way of setting up an antenna system (except in phased
systems) is to tune the
antenna itself by lengthening or shorting the radiating element.
Unfortunately, many manufacturers
know that an apparent majority of CBers have bought into the "coax length"
thing and have no way
of proving or disproving it. I have used an MFJ 259 Antenna Analyzer right
at the feedpoint of the
antenna, and then checked it again with a random length of coax--10 feet or
so. The readings were
exactly the same. I have heard that the Firesticks were pretty good, but
when I get hold of an antenna that wants a "certain" length of coax, I get
suspicious. Normally, you should tune the anTENna, not the coax.

Tim,

That's the reason CB should be on VHF or UHF. We both know about the noise
and racket
that goes on on 27 MHZ. By moving to a segment of spectrum that does not
normally lend itself
to "skip" (tho it can be affected, just not as often or as long), you
effectively increase the number of
"channels" in that many, many more people can be on the air at the same
time, same frequency and
never bother each other.

I'd have to agree, Tnom. You have to attract the agents' attention in some
other way, but when they found the uncertified transmitter that proved, upon
test, to be a 27 MHZ transmitter, you'd
have a problem. If you made one of those transmitters, tested it into a
cantenna, and set it on a
shelf, it would provide a home for a lot of spiders before it would cause
you any trouble.

A lot of the new truckers had never heard of a CB radio until they graduated from T/D school, once they got on the big roads and listened to the old school they
want to sound like the large cars so they take their 29 to the local butcher where the AMC is disabled and a power mic.,connex board,T/B,RF amp.
and a Wilson 2000 is installed.
Hoot and Holler, i got a BIG radio now.
These people don't know the difference between Front End Overload and a hole in the ground.
After the newness wears off they begin to smarten up ,but it is our job to tell them when they are over-moddin and begin to educate them if they are willing to learn.

Not a stupid question at all, yes 10 meters refers to wavelength.
Wavelength is inversely propotional to frequency, the higher the
frequency, the shorter the wavelength, and vic versa.

First, it the antenna's input is 50 ohms, the feed line
is 50 ohms, and the radio's output is 50 ohms, there is
no reactance present. There is also no SWR (1:1).

Second, if the radio is 50 ohms, the feed line is 50 ohms
but the antenna's input impedance is something other than
50 ohms, the problem is the antenna's input impedance. Why
not fix the problem where it occurs? Change the antenna's
input impedance to 50 ohms. Simple, isn't it?

Third, if the radio is 50 ohms, and the feed line is 50 ohms,
there is absolutely no way to match an antenna's 'non-50 ohms'
input impedance by varying the length of the 50 ohm feed line.
The mismatch between feed line and antenna does not change.

Forthly, your 'big time' tech doesn't know what he's talking
about, and unfortunately, neither do you conserning the length
of RG-8x and RG-58 to make an electrical 1/2 wave length. I
would suggest reading ~all~ of a good text on resonance,
inductance, capacitance, reactances, feed lines, antennas, and
standing waves, not just part of it. I do agree with you about
the 'so-called experts', most of them are 'so-called' because
ther are NOT experts. Radios, feed lines, and antennas do have
a specific relationship for best performance. That relationship
is well known and NOT in doubt. There is no magic to it, it's
all well documented. Those who try to make it mysterious do so
for a reason, they want what's in your pocket, (and I don't mean
your 'Old Timer').

The Firestik KW series is pre-tuned to 27.48 (or there abouts).

I've never had to tune one for CB (KW-7). YMMV

Correct, the line is "flat" and the swr is the same at all points,
so inserting an swr meter at any point with any length jumpers
will give an accurate reading.

>
> Second, if the radio is 50 ohms, the feed line is 50 ohms

Should be, but some insist on making it hard. It is just a popular
myth that trimming the coax to a certain length will give you a
better match and a bigger signal.

Agreed, now all he has to do is kill file
him, and his head is safe for a while.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Well good luck Keith, I'm afraid too many trolls
have infected the group, so it's going to be an up hill
battle for discussions. As for Doug, well he and his clones
have left such a stain here, I doubt anyone here will forgive
him for what he has done. As long as you are happy about him,
it really doesn't matter at all what other people think about
him. It's a funny thing, I'd bet you hundred dollars that all
the big talk by the trolls wouldn't ever be said to your face
or on the ham bands, so go figure.

Woah, Tom. You snipped off the rest of my post and the subsequent
posts I made. The HR2510 is legal for 10 meter use --- only under
certain conditions. One of them being that it is used by a licensed
ham, used within Part 95, etc. etc. Nice try tho.

>Apparently you disputed it. You were adamant that these radios were
>"illegal" for amateur use, and even went so far as to tell ebay to
>remove auctions of these kind of radios.

I did?? Gosh, I didn't know I controlled e-Bay auctions. Where did I
get that power? They do exactly what I say when I say it? No kidding.
How does that work exactly?

>Backpedal all you want, but you made the
>claim that certain 10 meter radios were illegal, period,

I wrote:
>Amateur gear does not require type-acceptance and never has. CB
>gear does.

I forgot that this was Usenet and folks will leap to correct any oversight, so I will correct myself. All RF gear must meet certain standards set by the FCC. This is known as "FCC Certification", and it was previously known as "Type Acceptance". Amateur gear is certified for use in the range of frequencies authorized for amateur operation, meaning, commercial amateur gear is not "certified" for use outside the amateur bands. This doesn't change the essential point of my previous post, since licensed amateurs may legally build,modify, and use equipment that is "capable" of out of band or illegal high power operation.....and CBers may not.

>This is the last I'm going to say on this. The bottom line is:
>
>1. Any radio capable of operating on any ham band (including
>10 meters) is legal for use by licensed hams as long as the ham
>uses it within the limits of his/her license.

How does this fact apply to eBay auctions of forbidden items and contraband equipment sales over the internet? If you want a "banned" radio to use legally, you'll need to find one via a private sale that someone already violated the law with by purchasing from a dealer.

>2. The FCC won't state so much that a private sale of a 10
>meter radio listed on the notice is legal, but as long as it's
>used legally by a
>licensed ham, the FCC doesn't care.

Hey Tom, any guesses what percentage of these "10 meter radios" are actually being used legally? Oh I forgot, unless it affects you directly, you don't care....

Me, killfiled? I doubt it.

-Aaron-

--
sparky@cet.com (Sparky) wrote:

Aaron will never be killfiled by many of the keyclowns because he speaks the truth, and truth is what most of them fear. IOW, anyone sitting on the fence is reading both sides of any argument, and can tell the difference between keyclown BS and the truth. That's why the keyclowns must keep shoveling more and more BS to try and cover up the truth as revealed by Voobner (and others).

And why would they do that? The obvious reason is that illegal operators depend upon each other to validate their illegal activities. Just like any other form of organized crime (or religion), it is social support that justifies their behavior. Things such as "logic" and "facts" diminish the persuasive effects of such anti-social reinforcement, and must therefore be contradicted.

Another reason is that some of them make a lot of money scamming people by convincing them to buy illegal amps and "export" radios. Opposition to these people has led to many, many threats of violence against Voobner, myself, and other defenders of honorable intentions. But many of us don't scare very easily, and will continue to educate people about the reality of radio communication (life is not an RF drag race).

Killfile Voobner? Ain't gonna happen. Deal with it.

Length is only a role if you co-phase two antennas. In which case, both
lengths MUST be equal.
For a single antenna it makes no difference.
Stainless steel whips can be cut if needed.
Even fiberglass whips can be cut if needed.
To do that, you do it in very small steps, such as 1/4" at a time.
Then seal the top with some type of adhesive sealer. Clear would be better.

You should at least have some type of license for doing the work.
Unlike hams, a cber can't just whack away and build one on his own.
Unless he plans on marketing it.
Then, if you do build such an animal, you'd need to test it on a dummy load.
Once you put the radio on the air for normal conversations, then you're in
violation.
However, said radio can be legally used in emergency situations like in
earthquake relief, natural disasters and the like, not you every day
emergencies handled by the local police and fire departments.
As for possession, no it's not illegal to have it.
After all, it's nothing more than a paper weight if it's not hooked up and
powered.

It is illegal to impost and market the radios.
So perhaps in their way of thinking, possession of is also illegal.
But at what point does importaion end?
Once the radio is in the country, we no longer have imporation.
We have distrribution and marketing.
I buy the radio from Pilot. Pilot is marketing the radio. I am not.
However, if I buy numerous radios, then sell them, then I am marketing the
radios.
I think the possession angle would be a hard one to determine.

As for the hams, again, it is an importation/marketing issue.
Unless hte FCC federal laws specifically state that possession is a crime, I
don't see how having one would be punishable.

Yes a relay. Radio shack has them readily available.
A relay is nothing more than a switch.
Of course, you could just hard wire it all in and watch everything fry
later.

> Brian Griffey

I personally don't believe the part about dead keying 180 mw. and sounding good in the distance. All you'd have out there is a double sideband signal. I figure about the only thing that saves you out there is if there's another carrier to beat against that's strong enough to replace the one you're not supplying. If your setup were the best I suspect every AM station in the country would be using it. Think of the savings in electrical power from the utilities.

Admittedly I'm not in a technical position anymore that would allow me the opportunity to simulate your system. However, I am in a position to hear others using your style of operation. Sounds like crap outside of where the carrier can be heard.
I also say you are incorrect that the "swinging" station will drowned out the one with a moderate carrier. At most, the swinging station will be heard because it's summing with the moderate carrier station but it's not going to drowned anyone out.

I would go as far as saying I think the swinging station might sound a bit louder close in because the agc doesn't know what to do with it.

No--you are very welcome to your "few channels" and "piss ant" power. All
we want you
to do is stop trying to take OURS!! Any initiative to take away your CB
band on 27 MHZ
will be caused by the ridiculously over-powered amps, and the ones who won't
stay where
they belong--not by hams.

\So what are you
> > saying ? 100 watts at 26 MHz is no problem, as long as you're

Incidentally, the air band is between 108 and 136 MHZ AM. That is
approximately the 3rd
harmonic (+ the fundamental) of 27 MHZ). The chances are remote, but with a
dirty, splattering
poorly, (or none at all) filtered amp, such IS possible.

Jerry

The Francis whip I have is an old "3/4 wave" which replaced the 1/4 wave whip in a Big Stick base antenna back when a Cobra 139 xlr was "state of the art". I see in the new adds for Francis that it is refered to as a "triple quarter wave". I never had to trim the Big Stick, swr was very flat. I am still gathering hardware to install my vintage Uniden Grant in my Z71 'hoe. I may wait until the temp drops to the low 90's. It's way too hot is South Texas right now.

Being a truck driver gives one a lot of time to think about important economic and political world issues
Well, I got to thinking about what could be done to make a more efficient mobile antenna and realized that size is THE problem. How do you get a multiple figure gain antenna on a truck? Loading coils are the answer and the problem at the same time -- the antenna radiation resistance drops as reactance is substituted for length. High current loops develop and the power is dissipated in the antenna instead of being radiated. If only the antenna didn't dissipate the power. Hmmm....let's see, P=E2 /R; now if R were 0 then...

From my work, I have some contacts in research groups over at MIT in Boston. Better yet, I knew a Japanese CB'er that is a graduate student there. The thought running through my head was to build a super-conducting antenna. This requires cryogenics, i.e. temperatures around minus 279 degrees Centigrade. I was able get a couple of the electronics major outcasts interested in the project and we built a 11-meter dipole test silicon wafer. They put together a lot of serial coils by "re-work" on the wafer; they were able to connect them so we had a super-conducting yagi. I took my RCI 2950 transceiver down to the lab for the first tests, but before we could test it, actual measurements showed it was resonant on 3.126 MHz. It seems that the normal equations for inductance don't work with super-conducting materials -- you need a lot fewer turns to get the same results compared to room temperature.
Many measurements and trials later, we had a eleven-meter resonant wafer. This time we put a 40-element beam on each wafer and stacked 4 wafers in the same assembly. That made a 160-element array on 11-meters in less than a half-foot cube (15 cm3).

The first test didn't go too well. I connected my 2950 to the super-conducting wafer antenna and tuned it for 11 meters. At room temperature, we couldn't hear anything. Using a heat pump, the lab technicians started lowering the antenna's temperature toward the super-conducting region. I was really impressed by how small the equipment is, and started thinking it might all fit in the truck. Just then, the 2950 froze solid, which had a negative effect on its operating characteristics. This wouldn't be so easy after all; the coax connection would need some study!

They reworked the wafers to put inductive coupling on them, but I could find no way to efficiently couple to it from the conducting array. Fortunately the guys came up with a new ceramic material that passed RF but not heat/cold. Probably, something that Kyocera invented just for this use. I sent the 2950 to the Best CB shop in Ontario Ca.(where I buy

all my equipt.) and asked them to touch it up for me. Frank,one of the techs there, asked exactly how the paint had been peeled off around the coax connector -- lightning maybe? No, I assured him -- just low temperature exposure, without saying how low the temperatures were. The project had to stay secret and besides, Doctor Bill can repair anything!

Since it looked like it might be a while before the 2950 would be repaired, I brought out my Galaxy 88. I had already placed an order for a RCI 6900F TB anyway. After verifying that in the super-conducting range the antenna was resonant on 11-meters, we connected the 88. The ceramic material worked and the rig operated well as we began the cooling cycle. The band seemed dead even with the antenna at -150 degrees C. It took another 10 minutes to get to the super-conducting range -- then the 88 blew up. It seems our antenna had a bit more gain than the 88 front-end could take.
Later measurements showed 500 volts coming out of the coax. A little hard to believe, but then what do I know about cryogenic LSI antenna technology? The 88 was also returned to Dr. Bill, but he frowned a bit -- the front-end board did look like it had been hit by lightning. Not to worry, Dr Bill can repair anything!

The 6900F TB arrived just in time to be able to continue experiments. We built a QSK attenuator to protect the receiver. With the LSI wafer antenna still inside the lab, we decided to try to make a contact on 11-meters,27.555. What a shock when we got it working! The first thing we heard was a couple of guys in Phoenix AZ talking on 27.555(Sheriff Bob and Triple 6) and that was with 80 dB of attenuation. We had the antenna array on a rotatable mount; I moved it about a half-degree and the guys in AZ disappeared. What beam width! We tuned them in again, and they were just about to sign off, so we thought we would try to work them.
The rig was tuned up at 150 watts USB on a dummy load; we switched in the wafer antenna and gave the guys in AZ a call. The noise was unbelievable -- an ionized ray shot out from the wafers and hit the wall of the building. Before we knocked a hole in the band, we took a piece out of the lab wall! Ever wonder what an antenna pattern looks like in 3D? There was a oval hole in the wall of the lab -- about 1-cm high by 2-cm wide.
We cut power quickly. Sheriff Bob came back on frequency a few minutes later and said he was using his back-up rig; something had taken his main rig off the air. For some reason, the station he was talking to never came back, so we decided not to transmit again until we knew for sure what was going on.
Also this being several months after the test I have found out that hundreds,maybe even thousands of CB tranceivers were wiped out in a path from Boston and to the southwest as far away as Austrailia.
Personally I think CB's need more adjacent channel rejection.

As near as we can tell, the antenna array has 620-dB gain over a dipole, but with a beamwidth of 0.75 degrees using the 60-dB points. With 150 watts output, the effective radiated power is 55 quadrillion

watts at the center of the beam (5.5 with 13 zeroes).
As soon as the MIT big guys realized what the hell the flash and noise was on the south campus, the entire project and equiptment was taken away from us by a jerk named Hollingsworth from the FCC and turned over to Homeland Defense. CB "tinkering" has contributed to something, but I am not exactly sure what. I haven't the slightest idea what was in those wafers or how to build another set. Do you think someone may be interested in this idea for Star Wars/SDI?? What I'd give to use a much smaller setup in the next Super Bowl Contest!

A few months later, MIT contacted me and asked just how close I had been to the antenna when operating. As best as I can figure, I was in the null behind the array. From what has been said so far, it looks like a secondary use for our antenna may be as a mass sterilizer and they are considering useing it in Iraq but confirmation will have to await the results of our medical tests. If our antenna ever hits the market, it looks like remote operation may be desirable.So after all this work and BS we have to come up with some kind of super shielding for mobile use.

As I am writing this, I have been informed that my friend Dr Bill can't fix everything after all. He's written off the 2950 and 88, and
I just found out that before the FCC confiscated all the equiptment, the guys tried one more time with my 6900F TB, but without the 100-dB attenuator to protect the receiver.The guys are recovering in the hospital from what has been guessed to be a freak lightning strike and the 6900 now looks like a pea sized piece of black glass and it looks like it will be a while before I am on the air
again.....Taildragger aka AF28

Thanks for the clarification. I wonder if I was a Ham in a previous life.
Or if I just made a good educated guess.

So on the same topic, if you transmitted unidirectionally to your friend
standing less than 10 meters away (lets say 7M) with a receiver, how would
the wavelength travel and what side effect may result?

Think of a radio wave like throwing a rock in a pond. The waves spread out in a circular pattern from where the rock hits, the wavelength is the distance between the crest of one wave and the next. It would not matter where you stood in the pond the waves still pass you. The strength of a radio waves reduces by the square of the distance, so if your friend with a receiver is 10 meters from the source there are no side effects other that he is receiving a strong signal (might over load his receiver). If he doubles his distance from the source the signal level is reduced by a factor of 4 and so on.

Most states have gone to matching the exit numbers to the mile markers. Oa
did it a year ago.
That narrows the search somewhat since there are few states that can
have a 700 mile long interstate. I'm thinking Texas may be the only state
but I could be wrong.

Yes, the wavelength (roughly) of the amateur band from 28.000 to
29.700. This is usually referred to as the 10 meter band.

CB frequencies are usually referred to as the 11 meter band.

"Divide by zero error" results.

You should have started with, "you ain't gonna believe this shit
but.....".
Do you even know what a yagi antenna is and does?
Look at your tv antenna on the roof of your house. That is a yagi antenna.
the yagi is a beam antenna. Depending on the number of elements, that beam
can get damn narrow.
a beam is a directional signal. A person at right angles to the antenna
could not signal it no how no way.

While I found your engineering marvel story entertaining, may I kindly
suggest you keep that sort of malarky in the truck stop where it belongs.

I've never seen any laws or rules that say that possession of those
radios is a crime, so I don't think there's anything to worry about.
Even if you're not a licensed ham.

I'm with you, though, what's most important is the responsibility of
the operators and how the radios are used.

Coass? Damn. Then I've been doing it wrong all these years.
Now just where do you get this coass stuff from?

For COAX, length is not important on a single antenna.
For co-pahsing, they must be equal lengths.
And you also don't know jack shit about bandwidth.
Bandwidth is determined by the radio itself, not the antenna.
Unless you're trying to say that the swr on all channels will be nearly the same.

all.

I've never heard of hams wanting to take (back) the CB frequencies. Or maybe some would like to, but it'll never happen. The FCC isn't just going to take that spectrum and allocate it to the amateur service.

Even if it did happen, there are thousands upon thousands of CB's already out there. If all CB manufacturers stopped selling CB's today, there would still be an incredible number of them active on all 40 channels. I know that CB'ers wouldn't just voluntarily give up their radios because the band was given to the amateurs. And I don't think the amateurs would want it because it would be heavily populated with CB'ers.

CB'ers have nothing to worry about.

> unless it was type acceptable.

Almost: You could build it, but you could NOT transmit with it on CB
frequencies. The transmitter has to be certified by the FCC.

> Possesion of "illegal radios" is not so much illegal. It is how you use them
> that makes them illegal.
> Just like anything else, it is how you use it that makes it illegal.

But ya know, if one was to run one of those radios with 25 watts PEP
on CB, the fact is that nobody would ever be able to tell! Conditions
change so much from minute to minute, and from day to day, that even a
skilled listener can't tell the difference between 12 watts and 25
watts, or even 100 watts most of the time.

That's why these threads are such a waste of hot air. We all know what
the law says. Most people obey it; a few don't and most people don't
even know it. It's the tiny number of people that run big amps and
echo boxes cranked up all the way that draw the attention, along with
those running "export CBs" and don't know they're into ten meters.

But to just lump all CBers together and say they're somehow all
law-breakers (as Jerry Ox has said) is wholly wrong-minded.

To the FCC, mere possession of an amplifier is evidence that you have
used it. UnAmerican? Yes, but that doesn't stop them.

WRONG! Part 95 has nothing to do with amateur radio. And no
"conditions" apply to amateur use. The HR2510 and HR2600 are
completely legal 10 meter radios for use by licensed amateurs on the
ten meter band.

My guess is "most of them" are being used properly and legally. Can you prove otherwise?

Unfortunately, it WAS an issue; YOU stated that those radios were
"illegal" and made no exemption for amateur use.

What you SHOULD have asked him was...
>
> a) Are the majority of these phoney 10 meter radios being manufactured
> and marketed for illegal purposes and used by non-hams? Are radios
> like "The General Grant" intended for legitimate amateur use?
>
> b) Haven't the majority of these phoney 10 meter radios actually been
> DEFINED as "non-type-accepted CB's" and NOT "ham radios" by the
> Commission?

There is NO SUCH THING as a "PHONEY TEN METER RADIO"; there are only illegal uses.

> b) Just because a ham could OPERATE a non-type accepted radio does
> that mean he may also PURCHASE one from illegal importers and
> marketers?

If the radio in question was imported prior to the date of the FCC's letter, yes, he can.

> c) Just because a ham could OPERATE a non-type-accepted radio, does
> that justify them being marketed to CB'ers at truck stops and in
> internet CB Shops?

If the truck driver has a valid ham license it makes perfect sense. The onus falls on the seller to make sure the purchaser is properly licensed.

> e) What about all the BS about "export radios"? Are they intended for
> CB in some other country? If so, what country is it where operation on
> ham bands is legal for CB'ers?

The FCC has no control over that in any event; their jurisdiction in the USA and possessions.

> You and I raised these and other issues in our discussion, Tom. They
> are questions that deserve answers.

They have been answered. You just won't accept that.

> Yet you chose to ask Mr. LaForge an inocuous question --- a question
> that everyone already knew the answer to -- and no one disputed.

Except YOU.

> >The end.
> >

truck driving school.....man what a joke.....how can
someone safely learn to drive and operate a big rig in a week driving
around on a abandoned airplane runway, with no highway conditions
present. geez...a waste of the taxpayer's money. yes i said a waste of
the taxpayer's money. who else would fund such a silly venture. they
use governmental education funds, that way they charge those simply
outrageous amounts of money for these kinds of things. and of course
sooner or later, someone decides they don't want to make the payments
anymore, and guess who gets left holding the bag. all of these private
schools should be closed or else find their own funding methods and
leave the government out of it, just my two cents.....

John,
There's really not much doubt, as you implied.
If it's illegal to import something, then that
'something' is classified as contraband and it's
also illegal to possess it, just like Cuban cigars.
What's so hard to understand about that?
'Doc

4766. Re: Super Yagi Design

Newsgroup: rec.radio.cb
Date: 2002-08-22 16:02:28 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3D650AF6.E1E48BAA@icok.net>
Source record: 133793

John,
You are also making a false assumption. The 'beam width' of a yagi type directional antenna is very seldom narrow as you may think. An average beam width of 60 degrees is considered narrow on HF.
What would happen is that the 'front to back' ratio disapears and the antenna is bi-directional to some extent. The low angle radiation also is gone (or converted to higher angles of radiation).
So, a yagi mounted on a truck will work, just not very well at all. As to adding more elements to the yagi, the boom would end up longer than the trailer before you knew it.
Even in the UHF areas, to get a radiation pattern that would be narrower than about 60 degrees, you wouldn't use a yagi type beam anyway, you'd use a parabolic dish. Even then there are what is called 'side lobes', and the signal would be detectable from the sides of the antenna. That's why radar is detectable even if the receiver isn't in the radar's beam.
You did get the 'divide by zero' thing right.
'Doc

Hey Packrat,
We have form letters all composed, and the process is so easy you
could call it automated...thanks a lot for the listings. AntiKeyclowns
own this NG, and there is absolutely nothing you guys can do to stop
us.

Steve,
'Francis' antennas may not be tunable by varying
thier length, but the are tunable. Any antenna is
tunable, meaning that their length is adjustable for
resonance and their input impedance can be matched to
the feed line's characteristic impedance.
Using the feed line to 'tune' an antenna is a very
inefficient and silly way of doing things. The only
result is that the SWR meter is fooled into thinking
it sees an impedance match that it likes. The mismatch
between feed line and antenna is still there, along with
it's associated losses.
And yes, they can be tuned...
'Doc

From: 'Doc <w5lz@icok.net>
Message-ID: <3D651025.21131D7C@icok.net>
Source record: 133802

Art,
If you want to use 18 feet of coax to feed an antenna
please go right ahead, but it isn't necessary. I does
keep the cable makers/sellers happy, though.
It's impossible to use a single impedance value coax
to properly feed 'dual' antennas. A fact which is proven
by your 'really good bandwidth'. Bandwidth is inversely
proportional to the efficiency of an antenna. The better
the efficiency, the narrower the bandwidth.
'Doc

4774. Re: New coax length question

Newsgroup: rec.radio.cb

Source record: 133803

John,
Take your own advice. The usable bandwidth of
an antenna is determined by the physical properties
of the antenna, not the radio.

What happened 'Doc? Replied to everything on the NG but this post? Anyway, here is proof. Direct from the CPSC website, section 1204 on omnidirectional CB antenna regulations and requirements.

Consumer Product Safety Commission ◆ 1204.3

for sale to a consumer for use in or

around a permanent or temporary

household or residence, a school, in

recreation, or otherwise, or (ii) for the

personal use, consumption or enjoyment

of a consumer in or around a permanent

or temporary household or residence,

a school, in recreation, or otherwise.''

The term does not include

products that are not customarily produced

or distributed for sale to, or for

the use or consumption by, or enjoyment

of, a consumer. A limited exception

from coverage of the standard is

provided by section 18(a) of the CPSA,

15 U.S.C. 2067, for certain products intended

for export and meeting the requirements

of section 18(b) of the

CPSA.

(d) Prohibited acts. It is unlawful to

manufacture for sale, offer for sale, distribute

in commerce, or import into

the United States any product subject

to this standard that does not conform

with the standard.

Clear enough?

.....Which is another gimmick to get CBers' money. Think about it; by
convincing people that
"co-phasing" is better, you sell TWICE the number of antennas! The funniest
thing I see around
is two antennas on the mirrors of a Toyota truck! "Iffen ah 'putt' two
antenners on mah Toyeeyoter
hit's bound to git out better, shore 'nuff thar". >>snicker<<

I'm glad you pointed that out. Folks get taken by this little sales gimmick
all the time-and, yes, it
sounds good and sells antennas when you can convince people that your cake
will stay the same size if you keep eating it! LOL! Truth is, the CB
antenna mfrs deliberately "dial in" a certain amount of sloppiness in those
BIG COIL antennas to cover more "bandwidth" and still make people believe
"Ah'm a-really a-gittin' out thar on that 'ere Predator Big Coil on all them
funny
channels thar!" <<g>>

Believe it or not, I drove truck in the 70s. You know how I learned it? I got in one
and just DROVE it. There weren't any truck schools that I knew of, and when my employer
said go get your "chauffeurs" license and drive the rig, I just did it. When I look back at it, it
IS a wonder I didn't get into trouble, but at least I did have experience with cabover straight
trucks with the same company rather than just hopping out of a car and doing it. I had backed
farm trailers before--even learned to back a 4-wheel wagon with a long tongue (there's a real
trick to that because it is the exact opposite of a regular trailer), so I had a little of something to
go on.

Jerry

Florence, KY 41042
ATTN: Mary Ann Neal

RE: Warning Notice--Unlicensed Radio Operation

Dear Ms. Neal:

It has come to our attention that tow trucks # 21, 27,52, 97, 99 and RR4 operated by your company have been equipped with unlicensed Amateur radio transmitters by one of your employees. These trucks are registered to Gelco Corporation, Sechrest Transport, and Jerry A. Neal.

This is a Warning Notice that operation of unlicensed radio transmitting equipment by you, your employees, contractors or agents is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301, and will subject the operators to fine or imprisonment. Fines are normally in the range to $7,500 to $10,000.

You are requested to respond to this letter within 20 days certifying that all unlicensed transmitters have been removed from vehicles operated by your company, its employees, contractors and agents.

Please call me at 717-338-2502 if you have any questions about this matter.

August 10, 2001

Derek's Trucking
3102 Rockspring Church Road
Creedmoor, NC 27522-1964

SUBJECT: Warning Notice--Unlicensed Radio Operation

Dear Sir:

Monitoring information before the Commission shows that you have been operating radio-transmitting equipment without a license on frequencies in the Ten Meter Amateur Radio Service band. Your truck bearing license plate ZB20189 was monitored transmitting on Ten Meter frequencies on July 19, 2001 at 10:30 a.m. on U.S. 1 near Cary, NC, at 2:50 p.m. on Kildaire Farm Road and from 3:00 to 3:30 p.m. from a landfill near the intersection of State Road 55 and Sunset lake Road. Re-transmissions of Nextel two-way communications were also sent from the truck on Ten Meter frequencies.

Please be advised that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301,and will subject you to fine or imprisonment, as well as an in rem seizure of any non-certified radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Monetary forfeitures normally range from $7,500 to $10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

These guys thought so, too.

Well personaly, I use a hotmail account for newsgroups and a few other
things because I don't like all the spam in my normal one. I don't see
what's wrong with a person using a junk mail account for various things.
They can always give people they know their real address at any time.

Actually, there's a local group that meets on a certain 10 meter frequency
at night year round.
Sometimes, we have people join in from the West coast, etc. even overseas.
Ten isn't that much
different from 11 in characteristics or coverage. The funniest thing that
happened is we had an unlicensed fellow come up and "join" us. Other than
remarking that there seemed to be a slim o
the frequency, we ignored him--at which time, he cussed, threw carriers, and
played music. Upon
one of the regulars remarking that the unlicensed guy was asking for legal
trouble, he bragged that
"HAH, y'all can't find me cause yer too dumb, and the FCC can't do an
%^&*(#@ thang if they do!" THAT did it. I took a mag mount CB antenna and
stuck it to the door of my car, went to a
parking lot and drove in a circle until I got a null to the West. I checked
a couple spots, and deter-
mined it was on a certain street, then drove slowly along in a westerly
direction as the signal got louder and louder. Then I disconnected the
antenna and still had a signal. As I stopped for a light,
the signal, by now so loud it was humming, the carrier stopped! I looked to
the right and spied a
CB beam and an Antron. He must've seen me, because we haven't heard him
again. So much for
not being found.....LOL!

In this example, by buying the radio, you have facilitated the illegal
act of marketing it. You probably won't go to jail for it, but it
isn't something you want to proudly brag to your grandkids about
either.

> However, if I buy numerous radios, then sell them, then I am marketing the
> radios.
> I think the possession angle would be a hard one to determine.
>
> As for the hams, again, it is an importation/marketing issue.
> Unless hte FCC federal laws specifically state that possession is a crime, I
> don't see how having one would be punishable.

Unfortunately, there is a lot more to the "10 meter radio" issue than
just whether or not sale and possession is a crime.

Hams are allowed freedom from type acceptance which means they are considered responsible enough to possess any type of gear provided they operate it within the law. CB'ers are not, and their equipment is restricted. In order to subvert the law and enable sale/marketing to unlicensed users, equipment intended for illegal use is called "10 meter amateur radio gear".

Most hams recognize the difference between the fake 10 meter gear and the real thing.

But a few hams are pirates themselves, and they want the illegal gear on the market.

Others don't care if outlaw gear is misused - unless it affects them personally.

Still others are stuck in the middle; they own a legit 10 meter rig and they use it legally. They realize that rigs similar to theirs are being abused by CBers. They also realize that CB dealers are selling another kind of gear - stuff that no ham would look at - and calling it "10 meter amateur radio gear".

But they are in a classic double-bind. If the legit hams complain, they may restrict sales of their own legitimate gear. If they don't complain, the sale and use of illegitimate outlaw gear proliferates.

Wrong. Possession of a 10 meter radio is not illegal.
Your reasoning is contraband and needs to be
exported.

If you're referring to mile markers, both Texas and California have such
high numbers. Those same mm's in Texas puts you on I10 in or around Houston.
I don't think I20 thru Texas has those high numbers. I doubt there's a USA
truck wash in Canada.I would be more inclined to believe this is a Texas mm.

> 'Doc

I was just trying to point out that a beam antenna is not the best thing for
on a vehicle.
There have been a few attempts before, but nothing drastic like this stated
here.
It just sounded more like a fictiona thing you'd see in a movie.

As for radar, the gun merely sends the signal in one general direction.
Once the signal is out of the box, the signal goes everywhere up and down.
Stand on a lake shore, drop a heavy rock into the water and watch the
ripples.
That's your basic radar beam effect.

Take two detectors and stand 100 feet away from a "gun". Trigger the gun,
then move the detectors out at 90 degerees to the "gun".
You'll soon see just how wide that beam is.
When they don't chirp. Measure the angles. I'll bet it's more than 60
degrees.

```
"error detected. divide by zero. slam head against wall".
```

For Sale: SBE Sidebander Mobile 23 Channel CB radio. Looks to be in excellent shape with controls on front for CB/PA, NB/LOC, Squelch and volume knob, AM/USB/LSB switch, clarifier knob, and inputs on back for antenna, external speaker and PA speaker. Is untested but unit looks to be in real good shape. Plugs into cigarette lighter plug. Asking $20 obo. Please email me with questions or offers.

thanks,
LP

Possession of ~a~ 10 meter radio may not be illegal,
but possession of ~specific~ 10 meter radios is illegal
since those ~specific~ 10 meter radios can not be imported
or sold legally.
Anyone can own a radio capable of operating on 10 meters.
Just anyone can not operate a radio on 10 meters. There are
specific radios that can not be imported, or owned legally
by anyone in this country. Those are all facts. Before we
argue about anything, lets make sure we're arguing about the
same thing. Is the radio your speaking of proscribed for
importation and sale in this counry?
'Doc

Actually, it is being used; it's part of the ten meter amateur band,
the CW part. You will either get jammed by VERY high powered hams or
reported to the FCC in no time flat. Stay below 28.000 and most of
them won't care.

It doesn't really make me mad; when yer right, yer right. Now I DO listen
to the lower
end of 10 when I am out on the interstate, and I'll surely turn one of 'em
in in a Noo Yawk
minute. But, no, it doesn't make me run up my BP. I am confident that the
problem will take
care of itself. You see, those in authority have promised to do something
about it. I am certain
that those in the know realize that it is better to deal with it now rather
than ignore it and hope it
goes away. Tell me, do you really think that those who encroach on the ham
bands now will stop
in 10 or 12 meters? I don't think so, unless enforcement convinces them
that it isn't profitable. I
think they will continue to spread until they press the "wrong" button and
raise the ire of other users,
the public, and Congress. Either sooner, or later, something WILL be done
simply because it will
HAVE to. Unregulated radio will NOT work

Jerry

From: "Scott (Unit 69)" <scott_unit_69@yaSPAMhoo.com>

Would you prefer upplus@NOThotmail.com?
Most munges in emails are easy to detect. This slows down spam.

The other reason for using hotmail or yahoo is because of HTML mail.
These attachments can contain viruses or other harmful things. By
reading that mail on a webpage, it keeps your 'puter separate from it.

John,
Ah, but remove the emitter from the housing, which
is basically what you'd have on HF with a yagi at the
height it would be mounted on a truck, and that directed
beam is no longer directed, but omnidirectional.
It also depends on what you call 'near'. At 27 Mhz,
'near' would be quite a few wave lengths.

The only place that I know about with such high numbers is Ontario, Canada.

Neither Texas or California have numbers that high, unless they have
changed their numbering recently.

It is hard to understand, because it is not true.

There are a number of items that are illegal to import, or even to
sell commercially, that are completely legal to own.

That is not correct. For example, it is illegal to import or
sell commecially scanners capable of receiving cellular frequencies.
But it is not illegal to own those scanners.

Wrong. A AR3500 is one of those radios listed. I specifically
conferred with a FCC official about purchasing one of these radios
from an individual. I specifically said I was not licensed. He said it
is legal to own one of these and sent me the letter that acknowledges
that they are only illegal to import.

I even have a property release letter from the same FCC office for a
mistakenly confiscated AR3500.

FINAL WORD.....They are not illegal to own

Perhaps an easy way to munge would be to use @h.o.t.m.a.i.l.c.o.m
A human can see what to do, a robot sniffer can not.
even h.o.t.mail.com would work.
Before you go using any dot com addy, make sure it's not a registered domain
name.
If it is, you could lose your account for forgery.
Otherwise, just drop the dot com part.
So you'd have @hot.mail.

> 'Doc

The operative term is "commercial sale". You also cannot import
or manufacture the items for commercial sale.

It is the same as with linear amplifiers. It is illegal to import
or manufacture for sale amplifiers that cover 10 meters. But once
an amateur (or other person) has modified that amp to cover 10 meters,
it is now legal to sell that amp - even to a non-licensed person. This
assumes that the person is not in the business of selling radio gear,
but is only selling his own personal property.

> 'Doc

In a way, you are both right.

If the radio is particular about SWR, then it can limit the
useable bandwidth of the antenna system. Throw an antenna
matching network in line and you can now operate the antenna
over a much greater bandwidth.

On the other hand, some antenna designs have a greater bandwidth
between given SWR levels than other designs. For a given radio,
it is then the antenna that limits bandwidth of the system.

Keep in mind - In general, the greater the bandwidth of the
antenna, the poorer it is going to be as a radiating element.

The most broadbanded antenna does not radiate worth a darn.
It is better known as a dummy load.

4862. Antron99 idea for Quadplex dweller

Newsgroup: rec.radio.cb
Date: 2002-08-23 16:16:13 UTC
From: yeah_right@noway.com
Message-ID: <3d665e54.10795116@news.verizon.net>
Source record: 133891

I am a Quadplex dweller, which is basically like living in an apartment. I live in an upstairs unit, so I have good elevation. My lease doesn't restrict antennas, but I don't have the option of attaching anything to the roof permantly, or anything.

I have tried some mobile antennas out on the balcony(that is all-wood, not metal), but I can't seem to figure out a way to get a good ground plane for the mobile antennas to work. My SWR readings are all over the place, depending on how the feedline is positioned, which tells me that the feedline is radiating RF, right? Anyway, I have all but given up on using a mobile antenna. Also, a verticle dipole is simply too large. I need something that is free standing.

I have thought about getting an Antron99, and just putting it in corner of the balony, where I can strap the lower third of the antron to the balcony. It would be very stable. Again, I would not have a ground, but from what I have read about the the A99 is that it doesn't use/need a ground plane, right? It's a colinear antenna, from what I have read.

Anybody ever try this, to eseentially, free-stand an antron? My balcony is approximately 20 feet above the ground, and it would be strapped to the wooden corner post of the balcony. Any ideas on how this would work?

Lightning is not a problem in my area around puget sound in Washington. I have been here two years, and there has never been a thunderstorm. I also could easily take the antenna up and down as needed in bad weather.

i woud be running a completely stock legal radio, of course......and running modest modulation to keep the TVI/RFI to a minimum.

So, good idea, bad idea, totally impossible?

I've already almost spent enough money to buy an Antron with all the tricks I've tried so far, so I might as well try it if it would work. But it's an expensive experiment if it doesn't work. I had an Antron in years past and it worked great, but it was on a 30 foot mast assemply and properly grounded (I lived in the midwest....major lightning issues).

Thanks for your input.

Scott

4863. Two VHF-FM w/CTSS (Multi-Use Radio Service)Radios for swap:

Newsgroup: rec.radio.cb
Date: 2002-08-23 16:19:03 UTC
From: rugerp85 <rugerp85>
Message-ID: <e0ocmug354f8gpfkd4sug7or4g7v2it8hi@4ax.com>
Source record: 133892

Two VHF-FM w/CTSS (Multi-Use Radio Service)Radios for swap:

I have TWO of these in MINT Condition,comes with the power
cords.mics,and a manual.

Looking to trade for a nice scanner or 10-meter rig HR2510/2600,Galaxy
DX-99,DX-88, etc.

VHF business 2-way radio has 38-tone CTCSS to cut interference from
others using the same frequency in your area. It comes pre-programmed
with 9 user-settable VHF business frequencies and can be programmed by
a RadioShack Service Center to nearly any VHF business frequency from
150.775 to 157.740MHz.

Product Features:

You can select 2-watt power for maximum range or 600mW power to
conserve the battery.
Has jacks for adding earphone or speaker/microphone and an alternate
antenna.
Size: 5ï¿½1/2x2ï¿½3/8x19/16 ".

For business users of VHF Business Band radios, the FCC has created
the MURS (Multi-Use Radio Service) for use with the following five
frequencies:

Operate license-free on the following frequencies:

151.820 MHz
151.880 MHz
151.940 MHz
154.570 MHz
154.600 MHz

FCC license required for the following frequencies:

151.625 MHz
151.700 MHz
151.760 MHz

Power is automatically reduced to 1 watt on channels specified by FCC.
Can be set by user to any two of these VHF color dot business
frequencies: 151.625, 151.700, 151.760, 151.820, 151.880, 151.940,
151.955, 154.570 or 154.600MHz.

Police/fire frequencies require a letter of authorization on the
letterhead from appropriate chief of police or fire department.

Set to 1 of 9 "color dot" frequencies or can be set by RadioShack
Service Center to almost any business frequency that you have a
license to use.

The only metal in the railings would be the screws/nails that hold it together, but the balcony is all wood.

That's not really an option. To support the antenna on a mast would
require a much more permanant and stronger mount. The only way i can
see this working is to strap it to the corner post of the balcony.
Again, the balcony is all wood.

The way I am thiking about doing it would cause only the top third of
the antenna being completely clear of the roofline.

well if thats all you can do then do it but the signal radiates along the entire antenna so if it could all be clear that would be much better.

Again, YOU are an authority on CB around the world? And I betcha only
SOME of those export radios are designed to transmit above 28 MHz, not
"every one". Like YOU would have any information on "every one", when
you aren't even familiar with the Uniden radios!

"Not familiar with those models," he says; yet he's spending hours
getting auctions of those models pulled from eBay! What a freakin'
maroon!

As Tom pointed out, those models need to be modified to operate on
11m. And I can tell ya, it's not just clip a diode or move a jumper!
In other words, they are legitimate Tem Meter Amateur Radios.

Yeah, very true. I wish I could put up a tower. :)

Mostly, I need a way to get a decent antenna up that has a nice low
SWR, and the Antron seems to be the way to go in my case.

Thanks for the replies, everyone!

The funniest
thing I see around
is two antennas on the mirrors of a Toyota truck! "Iffen ah 'putt' two
antenners on mah Toyeeyoter
hit's bound to git out better, shore 'nuff thar". >>snicker<<

"I knew a guy who had twin 102" steel whips on each side of his Toyota
pickup.
Tom "

Jerry,

You drove big truck and you make mobile antennas. Surely you know the
direction (front and rear) is improved with cophased antennas on a big
rig but the Toyota isn' wide enough to space the antennas apart enough
to enjoy the achieved affect.

That's what I was talking about!. But, the antenna mfrs have used the
twin-trucker thing
to sell more antennas to the regular Joe, often "forgetting" to tell the
customer that their
phasing won't work on a "Toyee-yoter". Hehe!

Bill,
If we are speaking about the 'broadbandedness' of
an antenna, the only thing which can affect that
broadbandedness is the antenna it's self, it's physical
characteristics, how it's made. Even if you add a tuner
of some sort in-line, the antenna's usable bandwidth
doesn't change, but the antenna ~system's~ does. There
is a distinct difference there; the difference between
the antenna alone, and the antenna and feed line combined
(if the tuner is at the transmitter end of the feed line).

Bill,
Okay, I can see that if an individual imports
one of these radios for his own use, then it would
be legall. But in all truthfulness, how many
individuals do that? Or, which is more likely, how
many of these radios have been imported illegally
for commercial sale in lots of more than one? I
suspect that happens more often than not.

Hey All:

Could someone please help me find a quality shop that does custom installations. I'm wanting to install a high end CB radio in a new vehicle and want to find a shop that does custom work. Anywhere between Orange County (Southern Los Angeles) and Fresno, California would be just fine.

Preferably this shop would have a reasonable selection of late model CB's in stock, and know how to tune it once it's installed.

Mahalo,

Scout's Dad

Nope! You forget; I'm retired. In the mornings, I check into several nets
(not ham), during the
day, both at home and out and about, I talk to my friends on 10 and 2
meters. In the afternoon,
I listen to the Maritime Net on 20 meters, Then I get back on 10. Or I'm
out in my workshop
tinkering. When I travel the Interstate, I listen to the lower end of 10
meters and send out a few
CQs on 28.085. IF there "happens" to be a trucker "a-tan-ferin'" on there,
I don't bother with it
unless he is close and going my way because, 1) I have to SEE him doing it,
2) I have to make
a positive ID and be certain that he is actually the one transmitting, and
3) I often see if he responds to my CW transmissions or comments on them
("hey, Driver, ya a-hearin' that 'beepin'' noise on here"). It isn't like I
spend all my time worrying about truckers, but I WILL protect what I earned-
and I did earn the privilege; they didn't. Recently I talked to a trucker
ham whose truck looked like
a porcupine it had so many antennas including a huge HF antenna on the front
bumper, so it's not
like I've got anything against truckers.

Now I know that we differ on our view of regulating radio. And I know
some CBers don't understand why we need rules. But we go by rules in all
parts of our society, and, from where I
stand, I cannot see how people obey some rules and ignore others because,
when they do, some-
one gets hurt in some way or another. It may not be pain or suffering, but
people get harmed, or
at least, inconvenienced. When anyone brings up this point, they usually
get hit with the question,
"Do you ever speed". No I don't speed which is borne out by the fact that I

haven't had a speeding
ticket or a moving violation in over 20 years. I try to drive safely, not
only because the law says I
must, but because I don't want to harm anyone. Likewise, I obey the
regulations governing my use
of radio because others have the same privilege I do, and while there is no
physical harm in operating illegally, there IS harm caused by it in
interference and/or prevention of use by my actions. It STILL equates to
the tools in my shop. If I have a saw hanging on the pegboard not
being used, it doesn't give a person the privilege (or right) to just walk
in and "borrow" my saw
simply because I am not using it. It is stealing, or using without
permission, and there are laws against people just helping themselves to
others' property--even if the intention is to return it after
they are finished. Even tho radio waves are intangible, they still "belong"
to others who have fulfilled
the government's requirements for its use. Even if they aren't using it at
the time, they are entitled to
expect that, should they choose, that frequency is open and available for
their exclusive use--not
filled with truckers beeping and squeaking away. Just as anyone would who
discovered that some-
one had absconded with his saw, I will look for the culprit that is stealing
my saw--or frequency.
If we obey the laws we choose and ignore the ones we don't like, society
would crumble.

To "Doc", I can say that Amateur Radio is NOT dying. And you are dreaming
if you think that
world governments are going to turn whole parcels of spectrum to CBers.
First of all, those
bands (most of them) are covered by international treaties. Our Fed can't
just say, "OK, we're
going to turn over huge amounts of spectrum to the CBers because it would
affect other areas of
trade and relations. Treaties are often bargaining chips to get concessions
from the member nations
and those countries are not going to sit by and just let one country
"pollute" the airwaves by just
opening it up to the barbarians, as it were. To do so would be foolhardy
because it would backfire.

Finally, if CB radio is so much deserving of all that spectrum as opposed to
Amateur Radio, let me
ask you this: Why do Amateurs now enjoy limited antenna protection from
zoning under PRB-1?
CBers do not. Why are there Bills moving thru State legislatures to expand
and codify those same
regulations to simplify and speed up the process of erecting antennas in
local jurisdictions? CBers
have no such protection except for the goodwill of the locals. Why was

money allocated from
Homeland Security to ARRL for the purpose of training HAMS to further assist in emergency comms? CBers receive no such recognition, nor any funds. Why is there now a Bill moving thru
Congress to exempt hams from restrictive covenants in neighborhoods? CBers will STILL have
no such protection. Why is that?

You are dreaming, simply dreaming. Sheer numbers of CBers? Numbers are no reason to fling open the gates of a beautiful city to the Mongols. And Mr. Hollingsworth told me personally to
"keep them cards and letters comin'"! That don't sound like he is "tired" yet! And you forget that
Riley is a ham as well: N4ZDH------look it up.

>Nope! You forget; I'm retired.
<<

You got too much money and time on your damn hands. C'mon down, we'll go swampin' for bass the likes that'll make the yankees eyes bulge!

>In the mornings, I check into several nets (not ham), during the
day, both at home and out and about, I talk to my friends on 10 and 2
meters. In the afternoon,
I listen to the Maritime Net on 20 meters, Then I get back on 10. Or I'm
out in my workshop
tinkering. When I travel the Interstate, I listen to the lower end of 10
meters and send out a few
CQs on 28.085. IF there "happens" to be a trucker "a-tan-ferin'" on
there, I don't bother with it
unless he is close and going my way because, 1) I have to SEE him doing
it,
<<

Just a quick question here..why? How does you seeing him lend anymore or less credibility to what you report?

>2) I have to make
a positive ID and be certain that he is actually the one transmitting,
and
<<

I still don't see.....

>3) I often see if he responds to my CW transmissions or comments on
them ("hey, Driver, ya a-hearin' that 'beepin'' noise on here"). It
isn't like I spend all my time worrying about truckers, but I WILL
protect what I earned- and I did earn the privilege; they didn't.
<<

And here is where we agree.

>Recently I talked to a trucker ham whose truck looked like
a porcupine it had so many antennas including a huge HF antenna on the
front bumper, so it's not
like I've got anything against truckers. <<

Recently I talked to a hammie that thought my "'Q5 coming from "up there" (he had my coordinates) was nothing less than spectacular," but I have nothing against hammies.

>Now I know that we differ on our view of regulating radio. And I know *some* CBers don't understand why we need rules. <<

And I know some hammies can't accept change
nor have the courage to debate without insult publicly, though I must admit through experience on usenet, this usually emanates from the no-coders.

>But we go by rules in all parts of our society, and, from where I stand, I cannot see how people obey some rules and ignore others because, when they do, some-
one gets hurt in some way or another. It may not be pain or suffering, but people get harmed, or
at least, inconvenienced. <<

HUGE difference between harm and inconvenience. Shouting about being inconvenienced is something the liberals have always wanted government to fix.
Harm is another subject altogether. Comparing the two completely undermines the profound nature of an act resulting in harm.

>When anyone brings up this point, they usually get hit with the question,
"Do you ever speed". No I don't speed which is borne out by the fact that I haven't had a speeding
ticket or a moving violation in over 20 years. I try to drive safely, not only because the law says I
must, but because I don't want to harm anyone. Likewise, I obey the regulations governing my use of radio because others have the same privilege I do, and while there is no physical harm in operating illegally, there IS harm caused by it in interference and/or prevention of use by my actions. It STILL equates to the tools in my shop. If I have a saw hanging on the pegboard not being used, it doesn't give a person the privilege (or right) to just walk in and "borrow" my saw simply because I am not using it. It is stealing, or using without permission, and there are laws against people just helping themselves to others' property--even if the intention is to return it after they are finished. Even tho radio waves are intangible, they still "belong" to others who have fulfilled
the government's requirements for its use. Even if they aren't using it at the time, they are entitled to
expect that, should they choose, that frequency is open and available for their exclusive use--not
filled with truckers beeping and squeaking away. Just as anyone would who discovered that some-
one had absconded with his saw, I will look for the culprit that is stealing my saw--or frequency.<<

Thing is, too many hammies think it's "their" frequencies and forget that they are guests there..the privilege you spoke of.

>If we obey the laws we choose and ignore the ones we don't like, society would crumble. <<

No, that's kinda the way society is. Matter of arguable opinion, that's exactly how society is. If it weren't, we'd have utopia and no need for prisons, rules, snitches, intruders, etc.

>To "Doc", I can say that Amateur Radio is NOT dying. And you are dreaming if you think that world governments are going to turn whole parcels of spectrum to CBers. First of all, those bands (most of them) are covered by international treaties. Our Fed can't just say, "OK, we're going to turn over huge amounts of spectrum to the CBers because it would affect other areas of trade and relations. Treaties are often bargaining chips to get concessions from the member nations and those countries are not going to sit by and just let one country "pollute" the airwaves by just opening it up to the barbarians, as it were. To do so would be foolhardy because it would backfire. <<

CB already has backfired from it's original intent.
Hammie radio is following it's footsteps. History repeates itself.

>Finally, if CB radio is so much deserving of all that spectrum as opposed to Amateur Radio, let me ask you this: Why do Amateurs now enjoy limited antenna protection from zoning under PRB-1?
CBers do not. Why are there Bills moving thru State legislatures to expand and codify those same regulations to simplify and speed up the process of erecting antennas in local jurisdictions? CBers have no such protection except for the goodwill of the locals. Why was money allocated from Homeland Security to ARRL for the purpose of training HAMS to further assist in emergency comms? CBers receive no such recognition, nor any funds. Why is there now a Bill moving thru Congress to exempt hams from restrictive covenants in neighborhoods? CBers will STILL have no such protection. Why is that?
<<

Simple. Money. Cbers pay no fees.
Hammies pay their fees and in return become yet ANOTHER government issued number on microfilm.

>You are dreaming, simply dreaming. Sheer numbers of CBers? Numbers are no reason to fling open the gates of a beautiful city to the Mongols.<<

Babylonians.

> And Mr. Hollingsworth told me personally to "keep them cards and letters comin'"! That don't sound like he is "tired" yet! And you forget that Riley is a ham as well: N4ZDH------look it up.
Jerry<<

He's great with the media. Can you remember in all your years, another FCC hands-on enforcement employee that was so adept at media?

In practicality, just about all of them are imported illegally.
The custom agents do not know how to tell the different models
apart - so they pass all of them.

It could be, and according to the FCC that would be illegal. However, there is a metric buttload of 10 meter radios out there on the used market, each one of them completely legal to own and operate (by licensed hams on the ham bands).

Tom

Not only that but there are a metric buttload of 10 meter radios out
there on the used market, each one of them completely legal to own
and operate by unlicensed individuals as long as they don't transmit.
This is a common use for these radios. CB'ers do it all the time.

> 'Doc

As I noted in my previous response, it is a matter of how you look at the matter.

A tuner really does not do anything to the antenna system. The standing waves on the transmission line do not change. All the tuner does is match the rig to the impedance it sees at the input to the transmission line.

So "broadbanded" depends on how much variation from ideal that you can tolerate. If I use a tube based transmitter, then I can usually tolerate up to about a 3:1 SWR. So I would consider the bandwidth of the antenna to be the bandwidth between the two 3:1 SWR points. If I use a transistor based transmitter, then the acceptable bandwidth will probably be 2:1 or less - using the same antenna.

Fat chance. If the FCC decides to expand the CB frequencies at all, it will be in the VHF or UHF range, or even higher. There is no way that they will assign any more HF frequencies - except possibly those between 27.405 and 27.999.

The FCC has wished for over 30 years that they had never created the CB band on 11 meters. When the intended purpose was local communications, it was a big mistake to do so.

Screw you. Shows how little you know. I've DXed around the world and
NEVER needed 1200 watts. It's only lamers that need that much power. I
never needed more than about 50 watts to talk whereever I wanted.

"Yup."

Nonsense! That statement has already been disproven. You claimed that
the said radios were "illegal" and made no exemption for amateur use.
You even argued with me and Tom Sevart when we said otherwise. You
were wrong. Admit it. You really have no choice; the entire thread is
there for anyone to read, and if they do they will easily see your
turn-about in position.

The real issue is the
> proliferation of fake 10 meter radios, export radios with no export
> destination, and the hijacking of the name "amateur radio" used for
> the purpose of selling illegal CB gear.
>
> -Aaron-

There is NO SUCH thing as a "fake 10 meter radio", Aanal Aaron. A 10
meter radio is made for use on 10 meters and is completely legal for
use there by a licensed amateur. And you still haven't supported your

claim that export radios have NO destination. We all know that they aren't legal for use here.

Stop the tap-dancing. And stop the B.S. You have ZERO credibility.

Sure you will, but only by mail order. There's still Newark, Hosfelt,
All Electronics, Electronic Goldmine, and others. You won't be able to
run down to the corner store for the part(s) you need, but you'll
still be able to get them.

Of course, nowadays everything is that blasted microscopic
"surface-mount" crap so maybe the hobby is dead and gone anyhow?

In a way, Lafayette Radio is still around; Rat Crap bought them out
and absorbed them.

The one time I went into an Olsen store it looked much like today's
Radio Shack stores. Minus the computers, cell phones and direct TV, of
course!

Heck, remember when Radio Shack sold Hallicrafters and National
equipment? Back when they were a real "radio shack"?

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Sold as-is.

$40 for all
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

Hat there that squeal is caused by the rf getting back into it like feedback
get a stock mike and see if that helps also run the power line of the amp to
the battery to make sure you give it enough to make it happy also try
grounding the amp to the chassis of the car if these work please let me know

Hello I have something to say about back 40/ 50 years ago you had allot more time on your hands lets face it all you did have is radio and books to keep you busy now look whets going on TV , computers, phones a wide selection of music and hobbies it seems so strange that they want more people to get into ham but they get join the 21st century being a radio teck and with ham radio in the house if you can't pickup a mike and say hello you take it to get it fixed so that you can. I know a lot of people that would make great hams but like me there isn't enough time in the day for that meanwhile ham radio is dyeing , well I have taken enough of your time chow.

Here's my $0.02

I just picked up an Antron 99 with the ground plane kit for my base set up. Haven't had time to set up a mast and haven't really figured out how. I live in a city that likes to bill it self as the city of trees. Just for temporary I clamped the Antron to the top of a 5 foot post that makes up part of my fence. The antenna is completely surrounded by 60 foot trees. Not wanting to cut my roll of coax until I get the mast mounted on the roof above the trees (never know how much you'll need) I just soldered ends on the 150' roll of coax and rolled up the excess under my desk. With this very *undesirable* setup I get great reception and transmission. I think if you strap the Antron to your balcony you'll do fine. Would be even better if you strapped that Antron to the top of a ten foot stick of rigid and strapped the rigid to your balcony I think. Can't wait to get mine set up right, if only I could get one weekend free I'd be done.

Dave

I just set up a home base cb and the antenna is mounted on a tv tower. I'm wondering if someone could tell me the best way to ground the antenna or direct me to a web site that has the information. Also does grounding affect the SWR or the signal strength?
Thanks.

Who says an SWR meter must be at half-wavelengths for an accurate
reading? I disagree. The article you reference says no such thing.
It does say the cable will transform the impedance but it does not
say the SWR will change.

You can accurately measure SWR at any length.

The imax has a better rep for keeping tvi/rfi to a minimum (better
construction).
An antron is more prone to cause tvi/rfi. Also useing a mast would further
remove
the antenna from the bldg & help avoid those problems.

Don't forget that everyone thinks all hams are old - think for a moment ... all were young at one time ... I got my license in 1962 and was active until 1970. What happens? Families happen. A lot of folks become inactive between their early 20s and perhaps 40 or more. The kids are gone .. one has more time .. and voilla! Back on the air. Yet, once one retires, there is even more time. My gut feeling (personal feeling only) is that this is what makes folks thinks all hams are old. Many are not; however, it is the retirees that have the time to become very RADIO ACTIVE.

Having been out of the HF business for many years (circa 1970), I would simply suggest hiring a licensed electrician that does that type of work. I used to use five ground rods, each 8 feet or more driven into the earth. There are better ways of doing it, but at this point in life, I'd hire someone that does this for a living (and not some upstart that puts an ad in the paper or on the internet).
Once I am ready to go on HF again (I'm close), I'll hire a personal friend that I have also worked for. He does street lighting, signal lights, and all kinds of power wiring (commercial - he got out of residential). He is a licensed master electrician and had worked on ground systems to boot. I trust him totally.

Need advice where to buy Telex Telethin (or equivalent) Earset components. Specifically the Telex or equivalent: cord, CMT-95 (60013-073) 5' straight cord with sub min .097 plug.
It gauls me that Telex lists this item for $20.

I don't know why he did it, because he knew that they weren't far enough apart to get good directional coverage, and one whip would have sufficed. But that's what he wanted.

He told me that another CB'er wanted him to co-phase a Firestik-type antenna and two on-glass cellular-lookalike CB antennas. He told the guy that it wouldn't be worth it, but I think the guy went ahead and had him do it anyway. I'm sure it didn't work very well.

Ya know for what most people end up paying for a "big"...(snicker)CB radio you can buy a pretty decent ham rig.I see alot of Yazoos mentioned but for about $400 you can get something like TS430,Alinco DX77T or many others.why pay that kind of money for something so limited?Limited as in you have more power,more stability and if you like you can listen to short wave and the other ham bands.If you move up in the radio world and get your ham license you wont have to buy another radio to be there.Just be aware that radios like the Yazoo 101 etc have ham band only coverage that is why I suggest the 430 or the like.They have continuous receive coverage and transmit with one or 2 simple mods........

Well, he will know the applicable electrical codes, and probably will
understand the grounding for house wiring quite well.

But that is no guarantee that he has the slightest idea about proper
RF grounding.

Jes go down to the hardware store and get a 10' piece of heavy wall copper tubeing and make your own damn almost unlimited RF 1/4 wave mobile vertical...It's not like it is hard to do.And then you can solder on radials and top hats that do nothing but will impress the hell out of the big coil bunch...LOL..orrrr you could do as I have done...and I have been playing the mobile antenna game for a long tom...a very effective setup that I use is one of the folding Hustler masts with a wilson 1000 on top.............I know the theory guys are going to bust my @ss here but it does have advantages over a 1/4 wave whip.And it has been my experience that if you think antenna theory is etched in stone somewhere you have not been building enough antennas

It's obvious that the extra power is causing some feedback, my guess would be into the microphone. Make sure the audio wire is well shielded, but you could be getting RF into the microphone itself. If that's the case, try another mike or do away with the linear amp. Of course they aren't legal to use, but you didn't need me to tell you that.

Tom

Yeah, I agree wholeheartedly, I just can't use a mast with the
situation I'm in.

I'm going to run my transmitter as clean as possible(4 watts, no
over-modulation) to avoid RFI problems.....if it's possible.
Fortunately, I have friends next door who can tell me if I'm
schredding their telephones or TV. :)

Thanks...

There is a difference in the power rateing of the gray whip.....if you cut one you will see whay...the gray one has flat ribbon copper in it not wire...I dont know exactly what the difference in rateing is but I have run a KW with a good match on the gray one and the other went up in smoke....I am talking at least 10 years back so I dont know about today...If Barjunk bought them out I wouldnt buy one..

I forgot to add that for height considerations useing heavy wall copper tubeing you can use 4 1/2 ' or what ever of 3/4" and solder on a 1/2" reducer and add a top portion of 1/2" that makes it handy for matching too.You use a hacksaw to split the reducer and then put a hose clamp around it to tighten and hold the 1/2" top portion of the ant,The tubeing being of larger diameter than a normal whip also give you better band width.

I was having a heck of a time mounting my Galaxy in my car. I couldn't find a place for it. There just aren't that many places to put a radio in a 2000 Dodge Neon (any sympathizers out there?). Man I want to cuss those engineers, sometimes :) How I ended up owning such a pussy car is another post altogether. Hint: my wife had it first.

Anyway, I had the radio velcro'd to the top of the dash for a while. This was obviously pretty stupid, but it's all I could think of. The sun beat down on it and made the radio too hot to handle (rim shot). Also, it would've no doubt become a projectile in an accident.

I'm notoriously cheap. I needed a fresh perspective on how to go about mounting this thing, but I didn't want to fork over one red cent to have a shop do it. My brother in law is pretty inventive, but even he didn't have an idea. The tech at my local radio shop hadn't a clue. He went as far as to say it was impossible to mount most CB's in a Neon. (!!!) I took it to my motorcycle builder. I figured, "Hey. He worked in body shops for years, and builds snazzy custom bikes. He ought to have a good idea".

I was right. He pulled out a cubby that was mounted in the dash near the floor. He then carved up the dash a little to make room for the radio. He has the coolest tools for this sort of stuff. I probably would've used an

X-Acto or something and butchered everything. The best part is, he did it in such a way as to allow me to easily put the dash back the way it was - with the dash carving completely invisible - should I ever sell the car. I paid the going rate for a radio install by a custom motorcycle builder in the central valley of California: I bought him a twelve pack.

Next project: We're going to put a hole in the roof of the car to mount the Wilson 1000 up right. The mag mount has caused more damage than a hole would have. (I can hear some of you going "Well, duh!") I know, I know. I knew better than to use a mag mount the way I did, but I was to chicken to drill a hole in my new car. He is also going to fix the damage caused by the mag mount (small crease in the roof, and damge to the clear-coat). For this, I believe the standard fee is approximately two cases of beer.

See, who needs a shop? Just hit up people you know (and buy 'em beer). :)

Alan S.

In a way, they've already done so. It's called GMRS and/or FRS. Nice,
quiet UHF frequencies (462 MHz). Few idiots and no idiot toys.

> The FCC has wished for over 30 years that they had never created the CB
> band on 11 meters. When the intended purpose was local communications, it
> was a big mistake to do so.

They made a huge blunder when they placed the Citizens Radio Service
on 11 meters, for sure. Then they showed their ignorance of physics by
making it "illegal" to talk more than 155.3 miles; on a band where
it's next to impossible NOT to do so most of the time. I'm sure they
have regreted the decision ever since. But hey, it's not MY mistake.
And they won't acknowledge it by amending (or deleting) the Rule.

Sorta like Aanal Aaron, who will not acknowledge the fact that he's
changed his tune several times in the thread about so-called "illegal"
ten meter radios!

He's right... there are a few things you can try:
1.) Cut the mic gain. This will have a tendancy to stabilize the amplifier
in the mic that is oscillating.
2.) Try bypass capacitors at strategic points within the microphone.
3.) Reduce the RF field that is entering the mic. That means cut your power
or move the radiating antenna away from the mic if possible.

According to what you've posted so far, all four posts have been precisely
the same.
All four lack the basic information required to make a sale.
Such as type of amp, linear or audio?
Made by whom? Model number is?
What's the power source 110 ac or 12v dc?
Input driving power required and output power is what?

He y wait a sec, let me call miss cleo.

He is selling a Dave Made M-80 amp. It was in his original post and was WAY over priced. He dropped the price on it to $125 shipped.

I had the dubious distinction of installing a 110 ft rohn 25 tower in my
yard once.
We shoved a copper rod down into the ground right beside it.
Then ran an extra heavy duty welding cable from the tower to the rod.
Within an hour of it being completed, it got hit by lightning.
We checked the cable and the casing got split open so we know it worked.

For swr, I doubt that at level of power it would make much difference.
I never had any of mine earth grounded and still had a 1.2:1 swr or better.

I see that most amps are for 28.000 - 29.700, at least this is what the manufactures state. Now does this just mean that they seem to work better in this freq. range? If this does not hold true then any amp that you can buy will work on the AM side, right?

Scott

Dennis,
The primary reason for grounding is electrical safety,
RF grounding being secondary in most cases. Take a trip
to your local library to look at a copy of the NEC (National
Electrical Codes) about it. There's a lot more to grounding
than you might think, and the NEC will tell you almost every-
thing you need to know (I'm too lazy to type it all here).

Scott, they are called 10 meter amps and
they will usually work between 26-29 MHZ no problem. However some are more
sensitive to the frequency they were designed for, this is very rare. Most amps
will work fine on AM, SSB requires a delay.
PS. Be prepared for a dickhead name Aaron(ious) to flame your post...he's an
anal cheeswiz!!!!!!

Hay Dennis if the tower is grounded then the antenna is grounded , and the
swr shouldn't be a affected unless something is wrong with the coax.

Tom,
I realize this is more troll than anything, but I'd
like to correct a few misconceptions you seem to have.
Back 40 or 50 years ago, people were as busy then as
they are now. There were different forms of entertainment,
and for the time, they were as well thought of (equaling
thinking with TV is sort of an oxymoron) as the forms
available now. Wait a few years, what's popular now will
be 'old' and quaint like what you think happened 'way back
then'.
The requirement to know Morse code is part of the licensing
process for privileges below 30 Mhz by international treaty.
Until those international treaties are changed, it's gonna
be there. The level of proficiency for the code has been
reduced to 'childs play' now. If you can't learn it in a week
or two, you are just not trying. It does require effort though,
and if your not willing to put out that little amount of effort,
well, you don't really want a license very much, and why should
it be given to you? Try it, you may be very suprized to find
out that it can be a lot of fun. If you have time for CB radio,
then you have time for ham radio.
I wonder where you got the idea that amateur radio is dyeing,
because it certainly isn't. The number of hams has never been
very large and considering that the radio spectrum is a limited
resource (they ain't making no more new frequencies), and that
the bands are crowded as is, who the devil needs a bunch of new
hams, where you gonna put them? As far as joining the 21st
century,
name one mode of communications that hams ~can't~ do if they want
to.
CW, all forms of voice communications, digital, TV, satellite
stuff,
and I don't know how much more, but you name it, they can do it.
So, if you want to find excuses for not getting a license,
that's
fine. If you want to believe amateur radio is dying, if that
makes
you feel better, then that's fine too. I have a suspicion that
it'll
be around a lot longer than you or I will be.
'Doc

Randy, just like you that site sucks for grounding info.

4978. Two VHF-FM w/CTSS (Multi-Use Radio Service)Radios for swap:

Newsgroup: rec.radio.cb
Date: 2002-08-24 15:03:16 UTC
From: rugerp85 <rugerp85>
Message-ID: <d18fmu4bgcbb6ab3rhi2jm2tikomldndcv@4ax.com>
Source record: 134006

Two VHF-FM w/CTSS (Multi-Use Radio Service)Radios for swap:

I have TWO of these in MINT Condition,comes with the power
cords.mics,and a manual.

Looking to trade for a nice scanner or 10-meter rig HR2510/2600,Galaxy
DX-99,DX-88, etc.

VHF business 2-way radio has 38-tone CTCSS to cut interference from
others using the same frequency in your area. It comes pre-programmed
with 9 user-settable VHF business frequencies and can be programmed by
a RadioShack Service Center to nearly any VHF business frequency from
150.775 to 157.740MHz.

Product Features:

You can select 2-watt power for maximum range or 600mW power to
conserve the battery.
Has jacks for adding earphone or speaker/microphone and an alternate
antenna.
Size: 5ï¿½1/2x2ï¿½3/8x19/16 ".

For business users of VHF Business Band radios, the FCC has created
the MURS (Multi-Use Radio Service) for use with the following five
frequencies:

Operate license-free on the following frequencies:

151.820 MHz
151.880 MHz
151.940 MHz
154.570 MHz
154.600 MHz

FCC license required for the following frequencies:

151.625 MHz
151.700 MHz
151.760 MHz

Power is automatically reduced to 1 watt on channels specified by FCC.
Can be set by user to any two of these VHF color dot business
frequencies: 151.625, 151.700, 151.760, 151.820, 151.880, 151.940,
151.955, 154.570 or 154.600MHz.

Police/fire frequencies require a letter of authorization on the
letterhead from appropriate chief of police or fire department.

Set to 1 of 9 "color dot" frequencies or can be set by RadioShack
Service Center to almost any business frequency that you have a
license to use.

Thanks everyone for your input. I've been looking at "The Solder Joint", in Orange, CA., and may go there today if they're open on Saturdays.

http://www.thesolderjoint.com/index.html

They sound like they're very experienced, and they do custom auto installs @ $60/Hr.

I tried "FG Best Communications" in Ontario but when I called them they said they don't do installs. In answer to one persons question about why I don't do it myself, I guess it's because I haven't screwed around with CB's since 1975, and I've found that it's sometimes better to spend my time making money and using that money to pay a professional, than it is to shoot from the hip. I started out my career as an automotive mechanic, and I surely don't mind having my hand in, but in this case I believe that paying those guys for one or two hours to get it right the first time is going to be worth it. I think that I'm going to have them do a "temporary install" since I don't know where I really want to put it. I'll make sure that the wires are long enough to move around if need be, and then eventually I'll pay a visit to a dashboard fabrication specialist and have it dash installed. There's a good spot there to do it but I don't trust a CB shop to get that right.

I'm leaning towards a Cobra "148 NW ST - AM/SSB", and whatever antennae they suggest. It would need to be an antennae that could be removed easily. My Suburban already has enough trouble fitting under garages and things. I don't know if there's a good spot to mount on the roof anyway because the metal on these new 'Burbs is extremely thin. It saves weight for sure, but you have to be very careful how you stress it or it'll warp like foil. :(

Thanks All,

Scout's Dad

To be honest I don't know how much difference it will make. I picked up both for less than 100 bucks plus a few other miscellaneous items. The only shop in my area that doesn't have a name like "Chicken Lips CB's and stuff" is going out of business so everything is on sale until they close their doors on Oct 4th. I'd be willing to bet that on the top of a 30 foot mast you won't care weather you have the kit or not. I finally decided to put mine on a 20 foot mast on the top of my roof. Just need to get it up and done before the neighbors see me or the antenna, he he.

The correct answer is Texas. Mile 738 is located on I-10 on the Katy Freeway in west Houston. Mile 785 is an exit on the East Freeway, east of Houston. Nevada and South Dakota may seem large, but the highway would have to zigzag the state several times to account for that kind of highway distance! I-5 in Califolrnia runs into Oregon at 796, but there aren't exits or much of anything else at 738 or 785.

Kenneth wrote:

You want to measure the swr of the antenna. This can be done at the feed point of the antenna or at the end of the length of coax, generally without regard to its length. Coax should be long enough to attach the antenna to the transceiver without having to obstruct the drivers vision.

HI Guys:

I hate to see this cause a problem. Here's the math...

First, I make $125/Hr, and they charge me $60/Hr.

It takes them 1 hour to do it right.

In that 1 hour I've lost $125 wages, and paid $60 labor. I'm out $185.

If I do it myself it would take me *AT LEAST* two hours. So I'm out $250. 250 minus 185 is 65. That's how much I'll save letting them do it. And I get to watch and learn.

Obviously the equation's more complex than that. There's driving times, whether or not I'm billable, etc. But in the long run it usually pays to swallow my pride and let a professional do it. If I *WANT* to do it I do it. If it's not a big deal I let someone else do it.

I'll just stick to doing my rocket science..... and to one day at a time.

Are you an accountant or a lawyer ? I like the way you tried to use the
numbers why not do it off of work hours, or do you work every minute of
every day? It wouldn't cost you a thing, 2 hours at $0 = $0 the -$65 dollar
figure is only applicable if you want to do it during your billable hours
and figuring it would take you 2 hours. You said you used to be a mechanic
then you should have some skills with your hands you are only installing a
cb radio not anything requiring your rocket science degree.

This is just semantics; the fact that 11 meter amps are illegal simply means that the manufactures state they are selling a 10 meter amp (where they are legal). Many solid state amps can cover around a 2:1 frequency range before problems set it. Now, please put on your asbestos long johns as flames are likely to erupt! ;)

The big deal for a tower is proper lightning protection. Once the proper ground bond is in to protect from the big spark, one can lay radials for a good rf ground. The most important thing here is safety.

Amateur radio operates under Part 97, and Part 95 is for Citizen's
Band radio. Thus it's obvious that if we're talking about hams on the
ham bands, they don't need to be concerned about Part 95.

How is he a "smart ass that doesn't know much about amps"? Your original post didn't give any details at all, other than it was wrapped in bubble-pak. You'll get more offers if you give more details. Like: Make and Model (if any), is it a bi-amp (with receive pre-amp), what power levels does it have, and little things like that.

Otherwise, it makes you a dumb ass that doesn't know much about ads, IMHO.

Scott,
Amplifiers are labeled for 28-29.7Mhz, the 10 meter
amateur band, so that they can be sold. As you and everyone
else knows, you can't make or sell an 11 meter amplifier.
So, that's just an advertising gimmic, a 'get around'.
All amplifiers are not built equally. Meaning that some
might possibly work 'better' on 10 meters rather than on
11 meters, just depends on how they're built, but on the
average, if it'll work in one place it'll work in the other.
Most amplifier will work okay on AM. That depends on the
'class' of amplifier it is. Without getting into all the
'why's and 'wherefore's, not all amplifiers will work well
on SSB.
'Doc

No, some amps. have specially tuned tank circuits and are designed to
resonate only on 10 meter band.
Generally speaking if it works on SSB then it will work on AM,
Class AB1 biasing is best for modulated AM but overdriving can change the
biasing causiong audio distortion and damage to the amp.

The ground plane kit is a joke and totally ineffective.

I must question the logic of this post. In the 70s Yeasu made the FT-101 series with 11 meters built in from 27.000 MHz to 27.500 MHz at around 80 watts stock. I know because I have one and I still get parse about how good the signal is. Everyone I know that has ever had one from the factory has got it with 11 meters in it and no mods have had to be done. I am just looking at Yeasu's add for the FL-7000 Solid-State Linear Amplifier and it covers from 160 meters to the top of 10 meters at 1200 watts so what is the problem???
About your comment about most amps working better on AM, I don't think so LOL. With CB and Air band being the only users of AM below 150 MHz besides broadcast stations it is not profitable for the manufactures to do that. I have never run into an AM only amp except when I was servicing a 308 foot broadcast station tower. That amp was designed to run at 570 KHz and AM only at 1000 and 10,000 watts. Most ham amps will run AM at about 1/2 the power of SSB and run cleaner, (less spurs and a smaller bandwidth).

The Tec class license doesn't require a code ticket so what are you too lazy to do the Tec test or just making excuses??? Ham dieing while it is reporting a 1% per year growth in both Canada and the US. In many countries they have had to add more prefixes to accommodate the growth. CB is what is dieing with many countries getting rid of the service all together and selling parts of 11 meters to commercial interests.

nothing wrong with someone else doing work. I paid to have a high quality fm stereo put in my LAWNMOWER, the way they mounted it was great, plus he threw in a pair of water resistant speakers, custom installers are that..custom. I install large flag poles, yes , most "intellegent" persons could do it, but it requires MANY tools and you get a warranty
and stuff. Ive put poles in some of the weirdest places- not just in the ground..on buildings, side of buildings, on hills, you name it.. Some things just need to be left to the professionals.

Hey, I don't know. My radio install was the first time my bike builder had
ever installed a CB radio in ANYTHING. Plus, i think he had like 5 beers in
him. Everybody that has seen the installation has gone "Wow, almost looks
like a factory option".

A little common sense, the right tools, some creativity (and a few cold
ones) go a long way.

I don't think anyone has addressed this aspect of why truckers sound shitty.

How about the fact that there's so many radio shops out there that install echo brds without limiting the max volume of the echoes to about 30%.

There's so many shops that will sell a radio with echo installed without testing the radio and training the new owner on how far up the knob can be turned before it sounds like shit.

There's so many shops that promote the use of an echo brd as the way to get max range. As in "it really makes you loud and you'll get out further".

As drivers go, most are appliance operators and wish to remain that way. Most are just interested in the one setting that sounds good while adding a little "something" to help distinguish themselves from the rest, or the noise. You can hear these guys and gals trying to adjust their echo brds all the time. The biggest problem with that is they ask for radio checks from people that don't really know what it's supposed to sound like for best effectiveness. So, you end up creating an argument on the air.

While the effectiveness of adding echo is a subjective thing, there is an upper limit to the settings. I'd say about 80% of the drivers I hear are well above the levels for effectiveness. Some are beyond the levels of absurd.

In years past, there's been a few dissertations in broadcast tutorials that covered the topic of echo/reverb. The general consensus is a max level of about 25% - 30% modulation of the loudest echo is the most effective setting. More than this is just an attempt to achieve attention and adds nothing to the intelligeability. In fact, more actually detracts from the effectiveness.

So, as it's always been, it's up to the integrity of the individuals who install the brds or sell the radios with factory brds to see to it that the appliance op. gets the best value for his/her monies. I'm saying, go the extra distance and make it driver proof. It wont take but an extra couple of minutes to install a resistor on the echo volume control. Then you can feel good that this radio is going to sound good no matter what the driver does with that knob.

It's a good PR thing in the long run because that driver is going to get compliments on the road and he's going to want to say "such and such set my echo brd up and tuned my radio". What's that worth to you? certainly more than the 3 cents for a resistor and a couple minutes more of your time.

As a side note..I always prefered those little potted echo modules that just had a few wires sticking out. They sounded great and you had the ability to

make it driver proof with just a change in resistor value during the
install.

You know, I did something similar to that. I lived in this newer
subdivision once. People tend to get a little wierd when it comes to
throwing up a cb antenna on the side of the house. I wanted to be neighbor
friendly, so I put up a Shakespere Big Stick. Not the finest
omnidirectional antenna available by any stretch of the imagination, but it
was all white, pretty unassuming, and worked well enough. I then primered
and painted the mast kinda off-white. It didn't make the antenna invisible,
but I will say that alot of people never even noticed the thing.

Decent advice, George.

I vouch for the antenna feed point. I have measured a difference in
"apparent" (I quote that for a reason) SWR at different ends ox the coax.
It doesn't mean that the SWR is different, it just means that the meter
shows it as different. It's my understanding that measuring SWR at the
antenna feed point is the most accurate, given an arbitrary length of coax.
If I can get it around 1.5:1 measured at the antenna, I button everything
up and call it a day.

I could be wrong,
Alan S.

news:20020824112607.08168.00002398@mb-df.aol.com...
> SINCE YOU DIDNT USE THE MIC IN OVER A YEAR CHECK THE BATTERY IN IT...

This is an excellent point.

I would go further in explaining that these mics were typically very poorly shielded nor well bypassed for rf.

Personally, I wouldn't worry about using that mic and would buy a better mic or at least use the stock mic.

Anytime you add power to a system you will begin to find the deficiencies in that system. Power mics of this caliber were not well suited for use in a higher than normal rf field. They would squeal with a basic radio and a slightly high swr.

According to what I've read about your installation, you have a few things needing to be done before you can expect the optimum performance.

Depending on the current draw of the amp, you can get away with using the fuse box of the vehicle for power. I'd say, as a rough estimate, that if the amp draws 20 amps or less at full output you can use the fuse panel. Normally you won't be drawing 20 amps. If however the amp is bigger than that you'll need a decent connection to the battery.

I would provide a very short ground strap from the case of the amp to a body panel that you know is welded to the remainder of the vehicle. A floor board, a firewall, a sidewall etc. these are usually connected to the remainder of the car thru welds and such.

I would also attach my power ground lead to this point as well although it can also be grounded for power at the battery. Personally, I like to use the body as my power grounding unless the negative battery connection to the body wont support that extra current. Even still, I would add an extra battery connection the the body just so I could continue to use the body for my power ground.

I don't recall what antenna you're using at the moment. If it's a mag mount on the roof just make sure there's no dirt and stuff under the mount to act as a dielectric. The mag mounts use capacitive coupling to the body and anything that gets between these two will prevent maximum coupling. When this happens, the antenna will try to use the coax as the ground and this will bring rf currents to the radio/drivers compartment on the outside of the cable and will couple to the internal car wiring as well.

If it's a trunk deck mount, try adding a couple short, heavy braided straps to the trunk hinges. You're trying to short out the hinges so the currents on the trunk deck will flow without restriction back to the body. Trunk hinges are usually made of nylon bushings and stuff that would make a poor and unreliable rf connection to the remainder of the body. You cannot trust a VOM to show a good rf ground as it only requires a miniscule contact area to show dc continuity. RF currents require a larger surface area to conduct properly.

A note about running the amps' power leads to the battery compartment is in order. ALWAYS fuse the power lead close to the point where you attach the positive lead. I'm not saying you need to put the fuse right on top of the battery but within a few inches of the power take off point. Sometimes there's a starter solenoid on the inner fender and that's where I would get my power. It isn't better current wise but lowers the incidence and effects of corrosion later on.

Without knowing more about the install, this is about as general as I can be.

Now you know as little as I do.

Good luck in your endeavors.

You'd make a hell of a used car salesman.
"Well lookee here y'all. I got this real creampuff of a car in the back. I know it's just perfect for you two. It's got everything you can think of and then some. Today's special, just for you $2,495 and not a dime more. You just pay for it now and you can drive it home."
"Well can we see it first?"
"See it? My word's not good enough for you? Ok. $2,395. Last and final offer."
As the couple quietly leave the lot in a hurry never to be seen again.

> Thank you.

Filters on the engine.
As a motorcyle engine is out in the open, so are the wires.
The static is coming from the wires.
Even though it may be kind of cumbersome to do, try grounding the radio to
the bike.
I had a motorcyle on which I put a home made mount over the headlamp and
handle bars.
I mounted a full size radio onto that and had not one bit of RFI from the
bike.
I mounted the antenna on the back of the seat on another small mount.

But your noise is typical for hand helds.
For any radio that isn't properly grounded or filtered.
Ask your bike dealer if they have any special noise filters for your bike.

Amateur Radio Newsline™ Report 1305 August 16th, 2002

Amateur Radio Newsline report number 1305 with a release date of Friday, August 16th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Japan says no to putting communications over power lines and the NCVEC says YES to remote testing. These stories are first on amateur Radio Newsline report number 1305 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM NEEDS: NO PLACE FOR PLT IN JAPAN

Proponents of using Power Line Transmission or PLT technology have suffered a major setback. Telecommunications regulators in Japan have said NO to its implementation after tests show that the system could interfere with other spectrum users including ham radio. Jeramy Boot, G4NJH, has more:

--

The RSGB has learned from its contacts in Japan who have been working on problems of interference from Powerline Telecommunications Systems that, following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit the roll-out of PLT systems operating in the range 2 to 30MHz in Japan. Japanese studies have shown that emissions from PLT are harmful to HF communications and all requests from PLT manufacturers to operate PLT systems have been refused. The RSGB has been told that the Japanese amateur society, JARL, has been actively working with the government, along with radio astronomers, broadcasters and others, to assess the impact of PLT systems on the radio spectrum. We understand that this decision has been given much publicity in the Japanese national press, which has highlighted concerns about interference to safety-of-life services.

--

What about Power Line Transmission systems being proposed elsewhere in the world? G4NJH says that in Europe, the Radio Society of Great Britain continues to press for tight limits on emissions from all wireline based telecommunications systems. Also that it is working with other High Frequency users to try to ensure that the spectrum remains uncontaminated by wideband noise. (GB2RS)

**

THE VE TESTING SYSTEM: NCVEC SAYS YES TO REMOTE TESTING

The National Conference of Volunteer Examiner Coordinators have endorsed experimental use of videoconferencing technology to conduct Amateur Radio testing in remote areas of Alaska. Newsline's Bruce Tennant, K6PZW reports:

--

An ARRL bulletin says that it all happened when the nations VEC's gathered with the FCC to discuss the all volunteer testing system and ways to inprove it. Meeting July 26th in Gettysburg, Pennsylvania, the National Conference of Volunteer Examiner Coordinators or NCVEC voted to back a one-year trial run to be conducted by the Anchorage Volunteer Examiner Coordinator in Alaska.

Jim Wiley, KL7CC, of the Anchorage group told his VEC colleagues that it's very expensive to provide Amateur Radio test sessions to the thousands of Alaska residents who live in remote areas. The vote followed discussion on whether having a VE team remotely monitor a test session while an unlicensed individual proctored the exams on site would comply with FCC Part 97 rules.

Section 97.509(c) of these rules says that three VE's must be present and observing the examinees during a test session. But Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau, pointed out that the VEC and the VE's are responsible for the proper conduct of the exams. He also said that no rule changes appeared necessary because VEC's already have authority to determine the manner in which their VE teams conduct examination sessions. So the test of videoconferencing ham radio tests will go forward.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

The Anchorage VEC says that it will provide progress reports to the NCVEC on the videoconferencing experiment. (ARRL)

**

ENFORCEMENT: THOSE REPEATER WARS

Repeater wars continue among hams on both the east and west coasts. And the CQ Magazine website says that those involved are dragging the FCC into battles the agency would really rather the ham community settle on its own.

Two examples. In West Virginia, where an uncoordinated repeater was interfering with a coordinated repeater in Virginia, the FCC ordered the owners of the uncoordinated repeater last winter to resolve the problems. However, it appears that interference is continuing and the FCC is again looking to the owners of the West Virginia repeater to investigate and resolve the complaints.

In California, a strange one. Last March the FCC found no enforcement issues involving a repeater in Sonoma County following complaints from another repeater group. Now, users of the Sonoma repeater are complaining of interference from the repeater whose trustee originally complained to the Commission about their repeater. (CQ)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9SEH repeater serving Champaign Illinois.

(5 sec pause here)

**

ENFORCEMENT: FAX BROADCASTER FINED $5.4 MILLION FOR JUNK FAXES

The Federal Communications Commission issued a record fine of over five million dollars against a company for sending junk faxes to businesses and consumers. Amateur Radio Newsline's David Black, KB4KCH, at our South-East Bureau has the details.

--
The August 7th fine against fax.com of Aliso Viejo, California is the largest ever by the commission for violations of the Telephone Consumer Protection Act. It is also the first against a company known as a fax broadcaster.

According to an FCC release, fax.com was paid to send unsolicited advertisements and other messages on behalf of more than 100 businesses. And FCC Commissioner Kathleen Q. Abernathy says that despite repeated warnings from the commission and numerous consumer complaints, fax.com appears to have made no effort to mend its ways.

Commissioner Abernathy added that the company appears to have founded its business on the practice of sending unsolicited faxes in flagrant violation of that law. This has resulted in the fax.com being cited for close to 500 violations at about $11,000 per violation. Thats the maximum penalty and it adds up to $5.4 million due to Uncle Sam.

But a lawyer representing fax.com has another opinion. Attorney Mary Ann Wymore says that the company feels the rules on unsolicited advertising are an unconstitutional restriction of her clients freedom of speech. And Wymore indicates that fax.com is going to challenge it in the federal courts.

For the Amateur Radio Newsline, I',m David Black KB4KCH.

--

fax.com has been given only the customary 30 days to pay the fine or file an appeal. The FCC is also issuing citations to more than 100 businesses that used the services provided by fax.com. (Adapted from FCC release and published news reports)

**

ENFORCEMENT: DONT ADVERTISE BANNED GEAR ON THE WWW

The CQ website reports some unofficial advice from the FCC: If you're going to sell non FCC approved amateur and CB equipment, don't advertise it on the World Wide Web!

Case in point. A company in Wisconsin we have reported on before. Roper Electronics which was asked by the Commission back on June 18th to explain why it was alleged web advertising non-certified CB transceivers and HF linear amplifiers on its website. The company was also ordered to submit a list of all High Frequency transceivers and amplifiers sold within the US or offered for sale during 2002, along with the FCC certification number for each model.

The FCC's Riley Hollingsworth says that his office has received a answer to the inquiry from Randi Owen. Owen is the owner of Roper Electronics. Hollingsworth says that his office and the local FCC field office is reviewing Owen's reply. (CQ)

**

RADIO LAW: DIGITAL TUNERS TO BE REQUIRED FOR ALMOST ALL TV SETS

The FCC has decreed that nearly all television receivers made after July of 2007 must include the ability to receive and display digital transmissions. Digital tuners in some of the larger sets will be required by July 1, 2004. All new sets of 13" and larger must have digital receiving capability by July 1, 2007.

TV set manufacturers are opposed to the new law. They say that it will add at least $250 to the price of every receiver sold. Also, that there is not enough digital programming to watch.

The FCC has another view. It is convinced that forcing the public to buy sets equipped with digital tuners will help speed up the conversion to an all digital t-v broadcast system.

You can read the full details on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225221A1.doc (From FCC release)

**

PRESERVING THE PAST: HAM RADIO COMING TO THE USS HORNET

Tom Hale, KB6SSN, tells the Amateur Radio Newsline that the staff of the USS Hornet Museum in Alameda, California has agreed to a ham radio project. The managers of the Hornet will allow a group of Amateur Radio operators rebuild and restore the original radio systems aboard the ship.

This will be a multi-year project three phase plan that includes getting modern commercial ham gear up and running aboard the Hornet as soon as possible. The planners are looking to contact anyone who served aboard the USS Hornet. If you did or if you know someone who did please have them contact Tom Hale KB6SSN by e-mail to tom@halemail.com. (KB6SSN)

**

WITH THE HANDI HAMS: SUMMER RADIO CAMP IS FULL

The Handi Hams report that their Summer 2002 Minnesota Radio Camp session is full but the group will hold its Winter camp in Malibu, California from March 2 through 9, 2003. Those interested in attending the 2003 outing are requested

to e-mail hamradio@courage.org to request an application. Applications will be mailed out as soon as they are printed and available. (Handi Hams)

**

HAM RADIO IN THE MEDIA: MORE DONATIONS TO “THE HUMAN RACE”

Kenwood Corporation will be the supplier of hand held radios for the t-v show The Human Race. And the shows producer, Bill Desjardins, W1ZY, says that he is happy to have Kenwood on board:

--
W1ZY: “We are certainly thankful to Paul Middleton over at Kenwood for giving the go-ahead on this and we look forward to a close working relationship with Kenwood.”
--

Desjardins tells Amateur Radio Newsline that there was a specific reason that Kenwood was selected.

--
W1ZY: “We are going to go with Kenwood’s in the field. The racers and the production crews will be using D-7’s during the actual race. Now other companies make good radio’s and we looked at all of them. But Kenwood won out because it packs APRS tracking into a really rugged field package.”
--

Desjardins also says that another important item has just materialized. He says that VE7FM has donated a home-brew, handheld, two-band beam to The Human Race for use with the D-7 and VC-H1 recently supplied by Kenwood to track satellites and pursue I-S-S contacts. Desjardins adds that this particular donation brings more good karma to the project. (W1ZY)

More information on the TV show “The Human Race” is on the web at www.humanrace.fr.st.

**

HAM RADIO IN THE MEDIA: FREQUENCY -THE TV SHOW

New Line Cinema is considering spinning off the movie "Frequency" into a TV Series. “Frequency” is the film where the non-ham hero uses his dad’s old ham radio equipment to communicate with his now decease father.

The movie was a great public relations boon for Amateur Radio. If New Line Cinema proceeds, a t-v show could help put the words ‘ham radio’ in the mind of every man, woman and child in the U-S of A. (Via W6AQ from published reports)

**

NEW PRODUCTS: A MANUAL YOU CAN CARRY

Jovan Peric, KB9K, says that he is now producing fully laminated mini manuals for a number of the most popular Icom, Kenwood and Yaesu transceivers. For more

information and photos visit www.radioamater.com/kb9k on the world wide web. You can also write to Peric at 3425 West Ardmore Avenue, Chicago, IL 60659. (KB9K)

**

CONVENTIONS AND HAMFESTS: DUKE CITY HAMFEST

The 2002 Duke City Hamfest will take place Friday, August 23 through Saturday, August 24th at a the University of New Mexico Continuing Education Conference Center in Albuquerque Hew Mexico. Hours are 5:00 p.m. -to 9:00 p.m. on Friday and 7:00 am to 3:00 p.m. on Saturday. More information is in cyberspace at www.qsl.net/dchf (N5ZGT)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

CHANGING OF THE GUARD: ERNIE HUDSON KI8O - S.K.

The ham who headed up the Montgomery Ohio ARES operation has died. Ernest Hudson, KI8O, passed away on August 2nd following a long battle with Cancer.

Hudson was 69 and had served as Emergency Coordinator for Montgomery County for over 20 Years. His organization with over 530 ARES members was one of the best in the nation. Hudson was also on the State of Ohio Council of Amateur Radio for the Montgomery - Greene County Local Emergency Response Council. And in 2001, KI8O was named as recipient of the Dayton Amateur Radio Association’s Distinguished Service Award.

Funeral services for Hudson were held on Tuesday August 6,2002 at the Parkview Church of the Nazarene, in Kettering, Ohio. (W8ILC)

**

RADIO BUSINESS: NEW MILITARY COMM SYSTEM BEING DEVELOPED

The Boeing Co. has been named prime contractor for a new U.S. Army communication system. The Joint Tactical Radio System is expected to be the foundation for all future Department of Defense tactical radios. (Published news report)

**

HAM RADIO IN SPACE: N SYNC WITH THE ISS

Russia's space agency says that it might scrap plans for 'N Sync singer Lance Bass to join an October mission to the International Space Station. This is because the Russian’s say that he had failed to meet a payment deadline.

Bass, who is backed by a consortium of companies rounded up by a Hollywood producer, David Krieff, has signed a preliminary contract for the trip. But Bass, who is already training at Star City Cosmonaut Center near Moscow has yet to secure a final deal guaranteeing a seat aboard the Soyuz craft.

If he does go, don't hold your breath waiting for him to turn up on 2 meter FM. He will be doing a lot of commercial endorsement work. In fact, Bass's space suit will be emblazoned with the names of sponsors. These logos will be seen during the eight TV shows Bass expects to beam down from space. Bass is also expected to record audio tracks for a future 'N SYNC release. (Published news reports)

**

HAM RADIO IN SPACE: THE AMSAT GLOBAL SATELLITE NET

Internet technology is allowing worldwide access to a new AMSAT net for beginning satellite operators. The AMSAT Global Satellite Net was recently started by Neil Hays, W6FOG, and may be accessed on VHF or UHF through repeaters linked via the Internet using the IRLP Internet Radio Linking Project network.

For those without IRLP access, but with HF equipment, the net may also be found on 14.250 MHz on 20 meters, every Wednesday between 0200 and 0330 UTC. I-R-L-P access is via radio only, but activity may be monitored by anyone with a computer, sound card and Internet connection. For more information on I-R-L-P, go to www.irlp net. For details on the AMSAT Global Satellite Net, see www.w6fog.net (W6FOG, AMSAT)

**

RADIO IN SPACE: SATELLITE RADIO VS. WIRELESS

XM Satellite Radio Holdings and Sirius Satellite Radio are reportedly in talks with wireless companies to resolve a dispute over interference with wireless communications services. The two sides have been bickering over the satellite services using equipment to extend their digital radio signals to hard-to-reach areas like metropolitan areas where skyscrapers can block satellite beams. Wireless companies fear that these translators will interfere with some wireless communications services. (Published reports)

**

DX

In DX F6FYD and F2VX are in Baku, Azerbaijan, until the 23rd of August. F6FYD will operate as 4J0FR- while F2VX will use the club call 4K7W. They will be active on all bands CW and SSB. (GB2RS)

And SM0CMH is active on 10 to 80 meters, including the WARC bands, on CW as SV5/SM8C from Kalymnos Island. He will be there until the 30th of August. For both these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: WATCHING TV OVER THE MOON

And finally this week, here is one of those rare stories where an individual has done something so outrageous as to earn a spot in the record books. It happened down-under as we hear from Q-News Graham Kemp, VK4BB:

--
Dr. Anthony Mann of the Physics department at the Western Australian University has created a "Receiving system" which allows him to tune in Television signals from the US.

Tony has been a DX, TV enthusiast for decades, using his scientific credentials to stretch the laws of physical limits in order to "See further and further, unaided by satellites or wire".
His latest accomplishment, apparently a first, is to work out the parameters for using the Moon as a satellite reflector for bouncing TV signals from the USA into VK6.

As regards Tony's gear, he uses an Icom R7000 receiver, a Jaycar 91 element UHF antenna fitted with GaAs-Fet 20db masthead amplifier.

So far there's nothing very special about that except that the antenna is mounted on a tripod 1.5 meters above ground with the ability to adjust both azimuth and elevation to track the Moon in his sky.

Fortunately a Moon setting in Oklahoma is well above the horizon in Perth WA.

The signal Tony receives is tiny, very tiny, and not enough to produce a picture he can watch or even sound he can listen to. At this stage, it's not about watching Buggs bunny cartoons, it's all a bit more scientific than that.

Knowing the transmitters frequency to within a few Hertz, yes that's right Hertz, is essential as what Tony is searching for is a "beat note" indication that a carrier signal is present on the Icom receiver.

By using web amateur "Moon bounce" web sites he was able to calculate the Doppler shift for a group of likely TV stations, and then got hold of a precise TV station's transmitting frequency down to the last two Hertz; ie: 501.248XXX, the X's being the Doppler shift migrated.

Results this year have included signals originating in Oklahoma and Indiana.

--

You can read more about Dr. Tony Mann’s television reception experiments at the cyberspace address that you will find in this at www.physics.uwa.edu.au/~agm/eme1.jp

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website

located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

One final note. As this newscast goes to air our staff is in Alabama at the Huntsville Hamfest presenting the 2002 Young Ham of the Year Award to Josh Abramowicz, KB3GWY, of Reading Pennsylvania. Josh is receiving the award for his work in promoting Amateur Radio through the Boy Scouts of America. Tune in next week for the sounds of this years presentation.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Well, this post was intended to start a bunch of arguments. Somebody's
gonna point out some insignificant detail and start a big argument.

I wanna get in on the action early. Let's see, step 1: I need to pick out
something unrelated to the point being made in the post....Hey! I got it!

".innanet is not a valid top level domain. "

Step 2: It's customary to bore others in the NG with your credentials
"I've been in computers for along time, and hold many certifications"

Step 3: Be sure to prove your point by posting a link that nobody will follow
"For a list of valid TLD's, go to
http://www.norid.no/domenenavnbaser/domreg.html"

Step 4: Insult the original poster, and talk yourself up
"You suck. I know way more about top level domains than you do"

Step 5: Continue this prick-waving excercise by issuing a stupid challenge:
"You think you're so smart? Prove me wrong! I'll eat a video card chip-by-chip if you can prove me wrong!"

Let the games begin! :)

Alan S.

"Landshark" <S3Buell@SBCGlobal.Net.> whined like the little girl he is
in message news:<xhW89.3014$7g5.194183398@newssvr14.news.prodigy.com>...

TOP POST PURPOSELY DONE TO MAKE LANDCARP WHINE SOME MORE!
Who ever said N8 needed or wanted forgiveness? Why would he? The
Antiboys have
overwhelmingly accomplished the task of making keyclowns whine and
moan. As for not saying stuff on the ham bands...that has no meaning
at all. We are not on the ham bands. Anything goes on CB...you
keyclowns have said that over and over. OK, so the Antiboys agree to
those terms and make you out as the whining cowards you really are.

More websites are on the way. More ratouts are coming daily. More
frustration and whining from keyclowns will then manifest itself here.
No one can stop the Antikeyclowns on our righteous path. There isn't a
thing you can do about us, so just sit there and take it. You have for
years and will continue to do so.

You can say anything you want, but Antikeyclowns are here to stay, and
you are completely without the power or intellect to stop us.

> Well good luck Keith, I'm afraid too many trolls

This thread about "Ham misbehavior" is immaterial. The only place where it counts is if you are in violation of FCC rules. Anything goes in this NG, just like on your effeminate CB band. You sissies just can't take it, canya?

Scumbag keyclowns are overwhelmingly in violation every time they key the mike.

Your sissified posts about "hams this and hams that" are just attempts to confuse the truth. You are federal criminals, and you WISH it was not true, but that won't ever change.

ANTIKEYCLOWNS OWN REC RADIO CB AND YOU CANNOT DO ANYTHING ABOUT IT!!!!!

Alan you are sooooooooooooooo wrong on this one. I don't believe you have been in computers for a long time or else I would know. You can't eat a Video Card chip by chip cause real computer guys don't call them chips. What a cud chewing moron. Prove me wrong Alan, prove me wrong. You probably don't even own a slide rule. No code sissy.

Hmmmm, I don't see it. Nope, just don't see it. That drivel above is on the intelligence and maturity level of most flames we see here. I don't see how a person could type that and then think they are witty or king of the ring.

I give Alan points for style, first attack, and technique. Hell, I'll throw in an extra point or so cause Alan is a good guy. All in all Alan scores an 8.3

WG,
An FT-101 isn't exactly an amplifier, is it, so I don't
see how that even applies in this thread.
The FL-7000 amplifier comes with the 10 meter band disabled,
otherwise it can't be sold in this country (as with all legitimate
amplifiers). They can be 'opened up' easily enough, and that's
usually what happens shortly after the original buyer gets it.
The 'problem' is that legitimate amplifiers (not CB amplifiers)
have to meet certain requirements to be sold in this country. One
of those requirements is that there has to be a 'block' for
frequencies above 25 Mhz. I don't remember the date this became
effective, but I would imagine it was in the late 70's, early
80's.
There were a bunch of transmitters/transcievers and amplifiers
made
prior to this frequency limitation.
If you'll take another look, you'll see that I did not say that
most amplifiers will work "better" on AM. I did say that most of
them will work "okay" with AM, big difference there.
'Doc

This is a shock. Despite some minor disagreements, I respected Dick for having the courage to speak his mind. His informational posts debunking "swing" and providing CW trainer links and encouragement to those seeking ham tickets added a lot to the NG. He contributed something positive, and he did it with humor and good will. I will miss him terribly.

-Aaron-

>broadcast station tower. That amp was designed to run at 570 KHz and AM only
>at 1000 and 10,000 watts. Most ham amps will run AM at about 1/2 the power
>of SSB and run cleaner, (less spurs and a smaller bandwidth).

Here's the reason even 10 meter amps are illegal.

http://www.tentec.com/Noamp.htm

Read it and weep. This is not to be confused with 10 meter radio issue, or I should say non issue. 10 meter rigs, even modified ones, are legal for appropriately licensed hams to use as long as they only transmit on frequencies for which they are licensed. Amps are quite a different story altogether. Take care and 73.

LOL!, pretty funny Randy, now
Doug's new account is going into the kill file.

Well it's Doug again, and another for the kill file.
And some people wonder why he is so hated?

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

How many people can install a 40ft pole ? (this is 2 pieces, bout 325 lbs+) , dig a 30 " X 48" hole, mix @500 lbs cement, match pole sections together, install all hardware on pole,by the way, the wire haylard is internal on this model we are using for this model, put in sleeve, perfectly level it, Then leave as if you were not there? Do YOU know what tools are ALL needed for this task? And can you do this BY YOURSELF ? And do it in bout 3 hrs? Oh, and not contract any help. Im not talking bout your punny little 20 foot poles that you put in like a fence post. And no finger prints left by your sweaty hands? Or put in an average 30 foot pole...what are you going to haul this thing in? your pick up? Didnt think so...Next.

--
If first you don't succeed, do the same thing again...see what happens

Whoa, don't tell CLP that! He won't believe it, because he thinks
there won't be any difference wherever SWR is measured, and he makes
all kinds of excuses why it 'might' be different. Funny thing though,
he doesn't seem to have much hands-on experience with this stuff. Can
you believe that he has never measured the characteristic impedance of
a coax?

>It doesn't mean that the SWR is different, it just means that the meter

Heh, cool! That's the kind of reply I like to see!

I'm laughing so hard right now, I can barely type. You're right! Computer guys don't call tbem chips. I'm not sure why I did. I must concede and hang my head in shame.

Get this, I was JUST given a slide rule that belonged to my grandfather. He was an elevator engineer. I have no idea how to use the friggin' thing. It came with an instructional book, and I had to put it down in frustration. "Calculators are so much easier!". Shows my age, I guess :) How did you guys USE those things regularly, anyway?

It gets worse. I haven't learned code yet. Dang, you really hit that one.
It must be really obvious! I AM working on it, though :)

I suck,
Alan S.

Umm, no it doesn't. It's right there in black and white where you
stated that 10 meter radios are not legal for use on 10 meters. Now
you're saying you never said that. You're grasping at straws.

Just why are you so obsessed with illegal operators anyway? You don't
seem to be a ham, nor do you seem to be a CB'er, either. Is it just
because you found a topic on which people like to argue with you? If
you were a ham, I could see why you'd want to keep intruders out of
the 10 meter band. But you don't seem to have a ham license. If you
were a CB'er, I don't understand why you're so obsessed with freeband
operators. They're not interfering with the legal 40 channels because
they're simply not operating there. As far as I can tell, you're not
an FCC agent, either. So why the obsession?

If you are a ham or CB'er, what kind of radios/antennas do you use?

Tom

5076. Re: Foot warmer question

Newsgroup: rec.radio.cb
Date: 2002-08-25 06:57:07 UTC
From: WG <nojunk@mail.com>
Message-ID: <7d%99.1366$fx1.390702@news2.telusplanet.net>
Source record: 134105

I did realize that I was off topic a bit with the 101 but they were putting 11 meters in them until the late 70s from the factory.
About the date I do believe that it was closer to the mid 70s around 75 or 76 but has your FCC ever enforced it? It is one of the laws that is not enforced because that would mean that the inspectors would have to get off of there asses and track down the person selling the equipment. That is not as easy as sitting in an office and listening to the ham bands for illegal operators and sending them a letter.
What is to stop the average American from coming up to Canada or down to Mexico and buying an unblocked FL-7000 off the shelf? US customs are not the brightest light-bulbs on the tree when it comes to radios. They will open up the box and look for drugs but they don't look at the functionality of the equipment.
I do know that it is a real pain in the ass with all of the amps on CB but if they would just feed them with good radios they wouldn't splatter as much, (garbage in, garbage out).

I wrote:
>Amateur gear does not require type-acceptance and never has. CB
>gear does.

I forgot that this was Usenet and folks will leap to correct any
oversight, so I will correct myself. All RF gear must meet certain
standards set by the FCC. This is known as "FCC Certification", and it
was previously known as "Type Acceptance". Amateur gear is certified
for use in the range of frequencies authorized for amateur operation,
meaning, commercial amateur gear is not "certified" for use outside
the amateur bands. This doesn't change the essential point of my
previous post, since licensed amateurs may legally build,modify, and
use equipment that is "capable" of out of band or illegal high power
operation.....and CBers may not.

WG,
There's also such a thing as 'type acceptance'. Which
means to sell an amplifier commercially in the US, the
amplifier has to meet some minimum standards. The 11 meter
'block' is one of those minimum standards.
'Doc

Aanal Aaron, a bit of advice: this just makes you come off as "dumb as a post".

You've changed your position so many times you don't know where you stand anymore.

We aren't desperate, but YOU certainly are. At least WE knew that no type-acceptance is required for amateurs; that's something that even a no-code newbie like you should have known. Weasel!

>a cud chewing moron. Prove me wrong Alan, prove me wrong.

I'm certainly NOT Alan, but I will tell you that you have it wrong! Older video cards used drop in chips to expand memory on them. These looked much like any larger sized (32 pins or so) IC chip. That would explain the eating of the card "chip by chip" and may give crediblity to his being around computers longer than you.

snip

How can you expect to be taken seriously if you can't even get your
facts straight.

1. The previous power limit was 5 watts input power.

2. The new power limit is 4 watts output.

Griffey is your amp a 10 meter amp? Or is that just a ploy to try and sell it? It is not an export model why the need for the Tom Foolery. Why do you call it a 10 meter amp? That is a fair question that should be addressed.

It's his website and he can do with it as he wants. If you have a problem with the layout of it, too friggin' bad! Don't go there!
I don't like "flash" enabled sites. As soon as i see a flash window loading on my screen, i just click out of the site entirely. I just feel that if a site wishes to waste my time loading that crap, I won't do any of my online shopping there if that is the reason for my going to that site. Whiney little douches like you have no say in how a website is constructed so shut the hell up and look elsewhere for what it is you might be looking for. I own websites also and get told that I "need " to include pictures on a site so those who are there to buy can see what it is they are getting. My reply is always the same......I set my sites up to be easy and quick to load. If you come to me looking for a product, you already know what it is you are looking to buy because i only carry a limited selection of high end equipment.

Source record: 134133

Picked up a good condition Console V AM/SSB 40 ch base rig as part of an estate, some very minor edge chipping on the wood cabinet along the bottom edges towards the back, the outer silver collar on the power switch stalk is gone but easy enough to find in the junk boxes, all in all cosmetically quite decent, no extra holes, no mods but easy enough for those who are so inclined, all functions and lights work (including scan!), no bad LED segments, operationally the volume, mode, etc., pots are very "scratchy" and could stand a good shot of contact cleaner, insides look clean with minimal dust and such, again no signs of ever being screwdrivered, but I have nothing up for an antenna, so unable to say anything one way or the other about TX/RX other than the relay keys when the mike is clicked, and there is low level audio present when the pots are fiddled with, I honestly think that all it wants is a good cleanup and tuning after long storage. For those unfamiliar with the rig this is a massively handsome base rig with a dark wood cabinet, bright dual multi function meters, scan feature, etc., etc., just a big impressive rig from back in the day! Includes stock little dinky SBE hand mike.

Haven't got the bench set up in the new place here, so really unable to get into going through it for the eBay crowd, figured I'd give as complete a description as I can and offer it up here first.

$75 and you ship it (it's heavy!!) or will consider swaps. Looking for 40CH SSB mobile in nice shape, used Superstar/Connex/etc. in good shape, or 25LTD in real nice condition, scanners, 2M mobile, whatcha got?? Will horsetrade up, down, or sideways. Any interest? eMail replies please.

> > Thanks.

I haven't seen anyone put it all in writing yet and just a site or two mentioned.

I have a few minutes in which I can share a few pointers.

Grounding for lightning can be a bit different depending on the terrain and the soil conductvity in your part of the planet.

Ultimately, you're trying to minimize the voltage differences between the several points of the system to ground and between the various points to each other. It's the difference of voltage potential betwen various parts of the system which causes the biggest problems.

You're going to install a system that does two things. One: it will force the strike to follow your planned direction to ground(as well as possible) thereby removing it from the tower and cables at a point farthest away from the building and equipment. Two: You're going to ensure that the strike causes all the points in the system to rise in voltage at the same time so there won't be any real differences in potential between these various points.

In general, you want to tie in several ground rods to the base of the tower. Typically these will be 6-8' long. The length of the rods is not quite as important as the number of them. You place them as in the spokes of a wagon wheel outward from the tower legs. Spacing can be upwards of 20'-25' apart. You'll probably only need about 3 of them in each of 3 directions.

You will attach a buried cable of at least #6 wire(solid or stranded with a lean towards solid) from the tower to each rod in a manner that is mechanically sound and then sealed against the elements. The cable does not need to be bare copper although that won't hurt anything. Solder is not required nor suggested. Do Not use solder as the main mechanical/electrical connection to each rod.

Attach these cables to the tower legs with a good mechanical connection. Try to use hardware that does not allow copper and galvanize to meet each other directly. You can get some cheap clamps just for this at the store.

Attach these cables to the lowest point of the tower that won't be hit by the lawn mower. The closer to earth the better.

After this, you'll want to install a coax protection device. This device is mounted to the tower near the same place as the ground cables. The closer the better. This also means running the coax down the full length of the tower to the protector. Attach the coax to the tower with something that won't come apart in the weather. You're trying to keep the space between the coax and the tower leg to an absolute minimum in an effort to stop any flashovers between the two

If you've done this you're better than halfway done. Ideally, you would run the coax along, or just under, ground to the entry point at the house.

At the entry point you should install a second protector and a couple more ground rods. This can be a smaller device as it won't have near as much of the strike energy on it as the one on the tower. Attached to this second protector will be a run of ground wire going to one or two more ground rods outside the house. Ideally, you would tie these ground rods to the main ones with the shortest run of ground wire possible.

If you're using guy wires, you can tie these in at their earth entry points along with the ground rods. This will lower the total inductance of the tower and strip the lightning strike off the tower quicker. You can plan the ground rod placement to put a rod at the each of the guy wire points with a short, heavy, straight wire jumper between the guy wire and the rod.

It isn't necessary to connect each group of rods together from each run. In other words, it's not necessary to actually form the "wheel" part of the "wagon wheel". It serves no purpose other than to keep the wire manufacturers in business.

Your tower and coax are now grounded. You have stripped almost all of the lightning strike off the tower and coax before it reached the house and the second protector removed 90% of that remainder.

Feeling pretty good aren't ya? Well, you're not completely done. If you were to do it all the right way, you'd also arrange to tie the electrical service panel in with the grounds for the tower. This could be an issue depending on tower placement in relation to the service entrance panel. Doing so will help to make sure that a strike will raise the voltage on everything to the same potential thus minimizing any differences in potential between all points.

Now.... there are specialty companies that offer special hardware and devices that are more exact for this application. This stuff is pricey. I have given you the "will do ok 90% of the time" scenario if you've made good mechanical connections and sealed them well.

Sounds like work doesn't it? It is if you do it right. Any questions? I'll be here for awhile. Ask.

Keyclown Busters,
Your partly right, if it works on 10 or 11 meters
'out of the box', then it's probably illegal. And you're
partly wrong. Nothing illegal about a 10 meter amplifier.
the use of a 10 meter amplifier by someone who isn't
licensed for it is illegal. So what else is new? How does
that differ from what I've said before?
'Doc
PS - By the way, I'm neither deaf or blind. Get rid of the
'caps'.

Hello All
I have aprox 40 lbs shipping weight of all sorts of really good parts.
Might be a little less or maybe more i have a bunch of hard to find
items and will fill the box up.
17 Ceramic bandswitches every one will handle legal limit + .
Some really Nice Air Varaibles big and small ones.
3 varaics
Tubes 3-813's, 1- 811, a bunch more tubes all transmitting tubes
5 panel mount meters
A nice collection of knobs
Aprox 12 lbs of ceramic and regular tube sockets
Plate choke with plate resistors and caps for 2-811
handfull of ceramic plate caps big and small
really to much to list individually. I have some pics if your interested.
There is alot here.
would like to sell it all in one shot, Make me an offer i can't refuse.
Chris NI4L

I believe this is a wake up call to all of us that The Lord can take
any one of us out of here at any time, regardless of our age. Just
this week in town here a 37 year old died after hitting a ditch with
his car, and the car went furthur on level ground and appeared
abandoned for 7 hours until his girlfriend went looking for him, after
many people, including family members passed him by. There actually
has been 3 deaths around here locally within the past week. Jesus
SAVES us from our sin & punishment, punisha! Accept his salvation
that he took your place & pusnishment for sin, believe The Gospel
(good news) and keep his commandments, TODAY!
Dave!

Message-ID: <3D694F4E.A530AC40@qnet.com>
Source record: 134200

Hello All:

I e-mailed Dave McCollum, and asked what the address was of the
Salvation Army Post that Dick was apart of, so that donations could me
made in Richard McCollum name. I will be donating to the cause.

Beer Keg, you are missed.............

Jay in the Great Mojave Desert, ... just down the road ah ways from the
fillin station

Jay:

What a great idea! I thank you for being involved. Here is the info...

Salvation Army Churches/Social Service Centers Citadel
Corps
3738 Cuming St OMAHA, NE 68131-1953
(402) 553-5694

I've heard from a number of radio folks in the last day, and every one
of them
have been just fantastic. I know radio was one of Dick's loves, and he
certainly found a fine group to share that love with.

Thanks again, and God bless

Dave

Thru all of our arguing amongst each other the little things that make life so precious seem to get swept away, and someone who probably none of us who use this NG daily and has ever met in person has passed away. I am deeply saddened by this loss as I feel he was a friend who we all bonded with on the NG and radio whether we agreed with Richard at times or not he was usually cordial and a good decent man one that we all would have been proud of to call a friend.

RIP Richard Mc Collum

> >Which is used in tracking down posts and the person who sent them.
> snip
>
> Oh? A IP address tracks down individuals?
> Prove it. Track me down.

They most certainly can.
Let's say you posted something illegal such as child pornography.
Google would use that IP to find out who your ISP is, as I did.
A court order requesting your ISP to divulge who the user was, at that
particular time, sending that particular message, would lead them to you.
Actually, the owner of the account would be held responsible.

In the headers, there is a line called "Message ID".
It's not random characters. There is a specific coding in it which
identifies YOUR computer.
Along with your IP, google could easily determine where the message came
from.

Here's your headers:

Path:
spln!rex!extra.newsguy.com!lotsanews.com!opentransit.net!newsfeed.news2me.co
m!fs01-sjc1.usenetserver.com!news.webusenet.com!pc01.webusenet.com!t01.sjc1.
webusenet.com.POSTED!not-for-mail

The last item in this line tells me you're posting from webusenet.com.

From: tnom@mucks.net

The mail addy you choose to use, correct or not, makes no difference. An
identifier.

Newsgroups: rec.radio.cb
Subject: Re: Dave or Debby SPANKED by ISP!!!
Organization: Group One News Network
Message-ID: <4guimucjq074fuakoa5jld1bmsj8sr6foh@4ax.com>

This line shows me you are using forte agent. The 4ax.com is forte's
signature.
The jumbled mess of letters identifies YOUR computer.

Noting other users of webusenet.com, you'll see some similarities in the line.

References: <d1e9cf6a.0208251107.998969b@posting.google.com>
<akbo2g02qod@enews1.newsguy.com>
X-Newsreader: Forte Agent 1.92/32.572
MIME-Version: 1.0
Content-type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit
Lines: 10
X-Complaints-To: abuse@usenetserver.com

Also identifies the source of the post.

X-Abuse-Info: Please be sure to forward a copy of ALL headers
X-Abuse-Info: Otherwise we will be unable to process your complaint
properly.

5145. The typical Ham

Newsgroup: rec.radio.cb
Date: 2002-08-26 01:26:48 UTC
From: audiotest3@aol.com
Message-ID: <20020825212648.28603.00002522@mb-mn.aol.com>
Source record: 134221

The typical ham is:
older Male,
overweight,
overly concerned about "Ham politics",
is ritualistic about the way they "Ham",
obsessed with Ham Radio,
non-technical (except about selecting antennas for their "rigs"

Most Hams are old men. There are few females in Ham Radio. The few young people in Ham Radio are often related to older Hams.

Ham Radio today makes a person overweight. Otherwise, why would the great majority of Hams be overweight? "Contesting" is the essence of Ham Radio. Contesting is making as many contacts as you can within a certain time period. Contesting is a low movement activity. As a result of less physical activity, and lack of restraint in one's diet, one becomes overweight.

Go to a Hamfest or Ham Radio meeting and you will see that this is true. The great majority of Hams are overweight. Not just a little, but very overweight. True, the majority of Americans are overweight. But Hamfests show that a greater percentage of Hams are overweight.

Hams seem to be obsessed about the latest regulation related to their hobby. Their hobby seems to accomplish nothing. It is a meaningless activity to entertain oneself. Contesters make rapid-fire contacts. They only exchange call signs, log in their contact, and then move on to the next contact. Hams seem get a thrill by doing this.

Hams have alot of rituals they follow, secret societies, codeword jargon. And I haven't even mentioned Morse code yet. Hams tend not to be technical, except when it comes to their antennas. Some take great interest and become quite good with antennas. However, the expertise stops there. Antenna knowledge is only useful in that it helps them select the best antennas for their radios. The goal of Ham Radio, don't forget, is to contest - make as many contacts as possible.

Hams are very obsessive about their hobby. The obsession is amazing. Hams try to mention Ham radio whenever they can and try to recruit. Hams get vanity license plates with their call signs on their plates. Hams will take a day off work if the Hamfest starts on Friday. One Ham said he moved to a particular state because he was a Dxer and there were better propagation conditions in that state!

The sad thing is Hams tend to find their contests interesting. Ham Radio needs to include more perspectives if it is to attract more members. Ham radio could be more interesting. It could have a variety of people, do interesting

activities, have interesting conversations, interesting do more technical things with radio. However, this is not what Ham Radio is today.

Hams do not usually achieve much besides winning "contests", which makes them feel good. Outside of Ham Radio, this means nothing. Within Ham radio, it tends to be forgotten with the next contest. There are many contests and their scores are published regularly in Ham magazines. As a result of their obsession, Hams have little time to accomplish anything else, and therefore are less successful. Ham Radio is a pathetic hobby, and the typical Ham is pathetic.

Etymology: Middle English, written declaration, from Middle French, from Latin libellus, diminutive of liber book
Date: 14th century
1 a : a written statement in which a plaintiff in certain courts sets forth the cause of action or the relief sought b archaic : a handbill especially attacking or defaming someone
2 a : a written or oral defamatory statement or representation that conveys an unjustly unfavorable impression b (1) : a statement or representation published without just cause and tending to expose another to public contempt (2) : defamation of a person by written or representational means (3) : the publication of blasphemous, treasonable, seditious, or obscene writings or pictures (4) : the act, tort, or crime of publishing such a libel

The sexual garbage is just that. Wanna keep it up? I'm sure certain ISP's would agree. It's old, childish, and pointless.

Pure bullshit.
An over abused sterotyping that's been around for years.
Like cb'ers, users are abundant in ALL age groups. Not just one.
And I am quite certain there are a multitude of women, of all ages who are
hams.
Repeaters are not established by dummies.
They are established by very knowledgable people.
Unlike a cb'er, a ham can build his own equipment. That requires
intelligence.
Unlike a cb'er, a ham is required to take a knowledge test, the license
granted based upon how much knowledge he has.
A cb'er only needs to buy a radio and put it on the air.
And that requires a ton of intelligence no ham possesses right?

KMA

> successful. Ham Radio is a pathetic hobby, and the typical Ham is
pathetic.

Yeah, stupid. it's so pathetic it's getting money from Department of
Homeland Defense to
provide additional training for hams in emergency assistance. It's so
pathetic that it's got some
protection against local zoning laws that states that local gov't must make
reasonable accomo-
dations for hams to have antennas and support structures. Currently, there
are efforts, mostly
successful, in state legislatures to codify the Federal statute (PRB-1) into
state laws. And there
is a Bill moving thru Congress to provide relief from CC & R's imposed by
builders and home-

owners' associations, and it is likely to pass. If you, sir, are a CBer you will find that there are
no such initiatives on behalf of CBers indicating the relative importance placed upon the respect-
ive services amongst the authorities.

This ham doesn't do contests, bud. A lot of my DX efforts go towards testing equipment and
antennas that I have built. I spend more time learning about the mechanicals and theory of radio
than I do talking. Non-techical? Fella, I don't go out and buy 'them thar antenners'; I MAKE my
own.

If ham radio is less technical, it is because of the caliber of people that are coming into the ranks,
and is a reflection of US society itself. It is not only radio that is being "dumbed down" in order to
satisfy the politically correct scions who are afraid someone less bright may be "excluded", but all
facets of society.

As to hams being old, you are seeing what you WANT to see. I see PLENTY of women and
kids in the hobby. I will be at the Shelby Hamfest all this week, and I betcha I can verify my
statement. We ALL get old eventually. I've been involved with radio since I was 10 when I
listened to my Dad's old 1940 Philco shortwave radio. And ham radio is not my only hobby.
I enjoy flying, woodworking, traveling, reading, swimming, roller skating, computers, and vintage
cars--among others.

The goal of Amateur Radio is to foster understanding of radio, goodwill among nations, and to
provide emergency communications during emergencies--which it did most admirably in the after-
math of 9/11; hams were among the first to respond, and remained on the job until most all regular
communications had been restored. I haven't heard a single word about your "Tan-fer thar" boys.Try convincing the New York City Emergency Management people that Amateur Radio is
"meaningless".

No matter how much you attempt to demean Amateur Radio, you will never be able to escape the
fact that CB radio among the affluent populace is associated with trailer parks, ratty old cars with
dual "whup-whups" on the bumper going "fooomp-fooomp-fooomp-fooomp" because they are running on 5 cylinders instead of 8, goofy, meaningless
jargon--often sounding like some unedu-ated Southern bumpkin, and

"pickem-up" trucks with twin Radio Shack fiberglass antennas on
the mirrors.

As to "accomplishment", how come it is Amateur Radio that is called upon to
augment emergency
communications during disaster, not CBers? Hmmmmm? Why are Amateurs
allocated thousands
of frequencies in multiple bands while CB is restricted to 40 channels?

And before the rest of you flame me, remember this knothead started this
argument.

Jerry

Maybe you can point me in the right direction. Personally, I'm 5' 9" (kinda short) and 163 pounds (not overweight and can still do a ton of pushups). I have NEVER contested. The guys I know personally and am in contact with on the air generally don't contest (come to think of it, only one is overweight and not by much). Conversations on the air run the gamut from 'what are the Rhinos doing (the local soccer team)?' to theoretical physics. I've chatted via teletype for hours on end with Brisbane, Australia, on HF. I've had a friend call me on the 444.850 repeater since his HT was much closer than the phone to ask if I could provide a ride (which I did, especially since I owe my amateur license to him - yes, the HT is usually on scan for a few hours in the afternoon and evening). I had a nasty crash on my computer which had both Linux and Windows partitions and the master boot record was kaput. I had stopped working on it and gave my friend a call on the air - a third station broke in (inside of 30 seconds) to advise me to boot the Linux and delete all Linux partitions with that and THEN use fdisk. It worked like a charm! You don't find that kind of help on channel 9. Most of the amateurs are quite knowlegeable (including the codeless techs). You find a number of techs, teachers, college professors, and, yes, garbage collectors; however, one thing is fairly common - a fairly broad knowlege of electronics - which extends far beyond radio. Of course, my activity is 440 FM; then again, like myself, many of these guys (and gals, although I'll admit there aren't nearly enough of them - you are correct there) have extra class tickets AND are on HF to boot. Methinks you are not only painting with too wide a brush, I think you've got the wrong paint as well. BTW a good number of them are involved in emergency communications - and many are in training for the same as well. What are you doing with your spare time?

73 from Rochester, NY

OK Jerry, read it again, then prove your point. Coax that runs straight from
the radio to the antenna is seldom used. Usually gets in the way of
passengers in a vehicle.

>Ok, back up some of this garbage, who is the ham that said he
>moved to another state for better propagation?

This was heard at the Boxboro, MA Hamfest (cant remember who said it). The speaker may have said this to include some humor in his speech. Also, there may have been other factors in his moving to MA. However, the speaker sounded sincere when he said this.

From: "Jerry Oxendine" joxendi@bellsouth.net

>Yeah, stupid. it's so pathetic it's getting money from Department of
>Homeland Defense to
>provide additional training for hams in emergency assistance.
True. But most Hams use their radios as toys.

>If ham radio is less technical, it is because of the caliber of people that
>are coming into the ranks,
>and is a reflection of US society itself.
Non-technical is fine if that's what you want to do with Amateur Radio. Some want to learn about the technical aspects and there are few avenues in Amateur Radio to do that. There are few mentors, technical seminars, etc. Amateur Radio clubs, at least in MA, do not emphasize the technical aspects.

>As to hams being old, you are seeing what you WANT to see. I see PLENTY of
>women and
>kids in the hobby.
There are Hams of various ages. Some clubs consist of mostly older members. There seem to be more on the older side than the younger side. The percentage of women is definitely low. As for being Hams being overweight, this is something I have seen at many Hamfests. At the Boxboro convention this weekend, so great percentages were overweight. I may have been seeing this, but I doubt others would not reach the same conclusion.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

> "latch on" to what?

He is probably referring to when the TX latches on.

Under certain conditions, some radios will stick on tx after you let go of the mic key. In such cases, the only way to stop it is to switch the radio off and back on.
The problem occurs with certain (poorly designed) radios when operating into a badly tuned antenna. The reflected RF gets back into the radio and may either lock the switching on transmit or, more often, send the output into self oscillation.

We had some radios in the UK that had those problems with a high SWR,
One radio hated a high SWR so much that it would just let out one almighty farting sound through all the channels and the signal LEDs would flash to the beat of the fart.

Messing with coax length may mask the fault enough for the radio to behave itself, but is not the cause or cure.

Regards,

Peter.

> in the unit.

Would that be because you only buy decent radios?

I have seen radios where the tx would latch on due to feedback... but they were cheaper, porely designed ones. Even then, it only happened with an antenna fault with the RF getting back into the radio circuits.

I have also seen UK radios which, as you say, have too much gain. Once again, they were cheap radios where the output has too few stages with the final stages having excessive gain to get the allowed output. Any messing with the output would result in self oscillation.

I have also seen it in the receiver of an otherwise good radio. Every so often, the rx would go dead with the only cure being to switch off and back on. It turned out to be too much gain on one of the IF stages.

Regards,

Peter.

He always spoke his mind, regardless of any apparent "side of the fence". His replies were always based on his technical knowledge, not the dogma that can rule some replies here.

I will certainly miss him on this newsgroup.

Regards,

Peter.

5180. Galaxy-Ranger Service Manual--2nd Edition

Newsgroup: rec.radio.cb
Date: 2002-08-26 06:48:05 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <npjjmugkip88hvdu3j82ccs53eb9fvs0jf@4ax.com>
Source record: 134157

In stock-the NEW updated Galaxy-Ranger service manual. This SECOND EDITION covers the EPT3600, EPT0696, and EPT6900 chassis types. That includes MANY brands such as Galaxy, Ranger/RCI, Superstar, Texas Ranger, Connex, etc. Complete details on this specific book are on our Web site at:

www.cbcintl.com/galaxy.htm

Check out all our CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

5181. Expanded 8-Band Channel Chart

Newsgroup: rec.radio.cb
Date: 2002-08-26 06:48:50 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <4qjjmugbrhj5k84ulhmiduhqh0dne8gs5m@4ax.com>
Source record: 134158

FREE DOWNLOAD, 8-band expanded CB frequency chart shows 4 bands down, 3 up, + CB 40. Find where you are, 25.165 Ch.1 lowest band to 28.755 MHz Ch.40 highest band. Includes the skips too.

Download this (13Kb, 1-page PDF format/portrait layout) at:

www.cbcintl.com/docs/channels.pdf

We'll be adding more freebies as time permits. For links to those freebies we already have up, go to:

www.cbcintl.com/freebies.htm

Due to high demand, look for the xtal-mixing charts & block mixing diagrams covering about 95% of the most common AM and AM/SSB CB radios here. Lots of guys asking to "fill in the blanks" in order to replace a bad xtal or convert/expand these older rigs to new freqs.

Many thanks (again!) for all your great support these last 26 years!
73,
Lou

5182. Re: The typical Ham

Newsgroup: rec.radio.cb
Date: 2002-08-26 07:12:31 UTC
From: AJ Sanderson <alphasand@nospam.com>
Message-ID: <akckcs$3sf$1@slb7.atl.mindspring.net>
Source record: 134159

> The typical ham is:
> older Male,

Well, not too old yet. I was licensed in 1990 at 15 years of age.

> overweight,

Yes, I'm overweight. Lost 65 pounds two years ago, but gained it back due to a new job where I didn't have time to exercise. I have taken care of this, however.

> overly concerned about "Ham politics",

I wouldn't say that in my case as I'm fairly inactive right now.

> is ritualistic about the way they "Ham",
> obsessed with Ham Radio,
> non-technical (except about selecting antennas for their "rigs"

Hmmm, definitely NOT obsessed with HR. I used to talk fairly technical at times, even when I was first licensed.

>
> Most Hams are old men. There are few females in Ham Radio. The few young people
> in Ham Radio are often related to older Hams.

Don't agree with your first statement, especially in my case. I do agree with the last two statements.

> Ham Radio today makes a person overweight. Otherwise, why would the great
> majority of Hams be overweight? "Contesting" is the essence of Ham Radio.
> Contesting is making as many contacts as you can within a certain time period.
> Contesting is a low movement activity. As a result of less physical activity,
> and lack of restraint in one's diet, one becomes overweight.

I think that's a good point. Contesting does restrict moving around for sure. I suppose that, over time, weight would be gained due to the lack of activity. Personally, I have never participated in a contest and I am unlikely to in the future.

> Go to a Hamfest or Ham Radio meeting and you will see that this is true. The
> great majority of Hams are overweight. Not just a little, but very overweight.
> True, the majority of Americans are overweight. But Hamfests show that a

> greater percentage of Hams are overweight.

I haven't been to enough Hamfests to draw this conclusion. What I have noticed at Hamfests, especially over the last couple of years, is a total lack of quality equipment being sold.... junk.

> Hams seem to be obsessed about the latest regulation related to their hobby.

Have you listened to the bands lately? 80 meters for example. "Freeband city" some nights. Hams should be concerned because I think deregulation is ruining the hobby.

> Their hobby seems to accomplish nothing. It is a meaningless activity to
> entertain oneself. Contesters make rapid-fire contacts. They only exchange call
> signs, log in their contact, and then move on to the next contact. Hams seem
> get a thrill by doing this.

Due to the chaotic state of the bands these days, it can seem like nothing is being accomplished. I'm not really up on contesters. I do know that many splatter all over the band they are on, but I might too in their situation.

> Hams have alot of rituals they follow, secret societies, codeword jargon. And I
> haven't even mentioned Morse code yet.

You sound like someone who was blackballed at one time. I won't say where blackballing occurs, but it is in a certain group. Too bad Hams can't blackball people they don't want licensed. However, if they could, there would probably be very little active Hams today.

Hams tend not to be technical, except
> when it comes to their antennas. Some take great interest and become quite good
> with antennas. However, the expertise stops there.

You're almost repeating yourself here. No comment.

Antenna knowledge is only
> useful in that it helps them select the best antennas for their radios. The
> goal of Ham Radio, don't forget, is to contest - make as many contacts as
> possible.

Another repeat. No comment.

>
> Hams are very obsessive about their hobby. The obsession is amazing.

Repeating again... hmmm. No comment.

Hams try
> to mention Ham radio whenever they can and try to recruit. Hams get vanity
> license plates with their call signs on their plates. Hams will take a day
off
> work if the Hamfest starts on Friday. One Ham said he moved to a
particular
> state because he was a Dxer and there were better propagation conditions
in
> that state!

They recruit because it's a dying hobby! I don't think Ham radio will survive another 50 years. Some Hams have become desperate. As to your other statements all I can say is that some people take their hobby very seriously.

>
> The sad thing is Hams tend to find their contests interesting. Ham Radio
needs
> to include more perspectives if it is to attract more members. Ham radio
could
> be more interesting. It could have a variety of people, do interesting
> activities, have interesting conversations, interesting do more technical
> things with radio.

What do you propose? Today's youth aren't interested in Ham radio. Most young people don't even know what a resistor is. The programs you mention cost money. With a dwindling number of Hams, how do we go about raising the funds?

However, this is not what Ham Radio is today.
>
> Hams do not usually achieve much besides winning "contests", which makes
them
> feel good. Outside of Ham Radio, this means nothing.

Of course not. Just like playing soccer means a lot more to the participator and a lot less to the spectator. If it's not your hobby, why should you care?

Within Ham radio, it tends
> to be forgotten with the next contest. There are many contests and their
scores
> are published regularly in Ham magazines. As a result of their obsession,
Hams
> have little time to accomplish anything else, and therefore are less
> successful. Ham Radio is a pathetic hobby, and the typical Ham is
pathetic.

Well, the average Ham makes about $60,000 a year. Pretty darn successful if you ask me. In fact, it is the higher than average salaries that keeps the market expensive, just like the astronomy hobby.

Just my two cents.

If you want to buy a paperweight that's your business.
23 channel rigs are illegal to use. Not own.
You can advertise anything you want.
It's whether or not the laws say it's illegal to distribute such
advertising.
Maybe some antique collector out there will buy the radios.
Do I care? Not one bit.

And don't forget, we here in the Central Valley produce much of this
country's meth. Wow. What a state! When the wind is blowing jus right,
you can just smell those meth labs cookin'.

And like Landshark, I don't do the stuff - but everybody knows somebody
who does and where to get it. It's all over. When I worked in San
Francisco it was easier to find people who DIDN'T smoke a little bud. I
just don't get it. Up there, primo sticky green stuff sells for $60 an
eighth. Man thats a lotta dough! I don't know how so many afford it.
What's even funnier is that doen here in the Valley where people don't
make anywhere NEAR bay-area money, the same stuff is like $120 an eighth.
Must be like a supply and demand thing. In SF, you can stop just about
anybody you see walking in the Mission and find out where to score some

in a hurry. It's really strange. Hell, in the Mission district guys just walk down the street in broad daylight smoking away. THAT blew me away.

Source record: 134166

Talk about generalizations...

I'm 25, maybe a bit overweight (stress can do that to you I guess) Extra class amateur radio operator (if you want to know more about me - like my call sign e-mail me at skuld@mail.ru). I've never been in a contest - mostly because I don't have the time really. Wouldn't mind trying at least one - just for fun. Its like K1TTT (he's a bad ass) said once - its like a video game, but involving whole world.

I am interested in ham politics - mostly because they sometimes affect me in a major way. Not to mention its hard not to. Spectrum is a limited commodity - politicians and corporations are very very interested in bandwidth (especially vhf/uhf and shf spectrum). Its hard not to be involved. I suppose cb operators don't give a riff since they would just use the spectrum anyhow if 11m went away one day - although as I recall on here and elsewhere everyone got upset when the fcc/congress turned over cb enforcement to local authorities.

I'm very very interested in antennas (since I'm space conscious). My dream setup is going to be a 180' tower with a multiband hf antenna, 6m/2m/70cm horizontal polarized antennas and a setup for satellites - probably build the satellite antennas, and tower myself. My favorite antenna is the ingenious arrow antenna - handheld satellite antenna. Worked my first dx contact with that - at 2 watts on uo14 - talked to a guy in san Francisco and Utah - and I have the qsl card to prove it.

On cber's though - I saw a video of a cb keydown - probably the closest thing to a amateur radio contest (except they are supposed to be illegal - keydowns that is). Lot of fat guys there, lot of mullets, lot of southern accents - even though it was in CA, and not much exercising (it really doesn't take a whole lot to rev your chevy suburban and shout audio into the mic). Most of those trucks had more antennas on them then I've ever seen on any amateur operators car. I could easily generalize that all cbers drive chevy suburbans or if not that full size vans made in the 80's.

Hate to say it, Jerry...but the man's got a point. As concerned as I
am about the 10-meter intrusion problem, I recognize that posting
"tain fahr" or "leen-yar" garbage on a CB/11-meter newsgroup will do
nothing to alleviate the problem. In fact, it may even have the
opposite effect. (Let's hope not.) Perhaps there are folks on this
board that CAN actually help out wrt the 10-meter intruder problem?
The vinegar just isn't working.

> You can support the accuracy of that statement? I doubt it.

Support for that statement should be obvious to all but the most blind
and those in the river nile.
Listen to the CB band during a "band opening". On it you will hear
stations from 25 to 28 Mhz, ALL of whom are operating illegally. Tune to
the regular 40, and while observing that signal levels are higher than
what would be obtained from a legal station 2 miles away, it becomes
obvious that these stations are running excessive (illegal) power.
Further analysis would show that the modulation level and the amount of
audio distortion is further evidence that the radios have been modified
from their original (If the radio was ever legal) type accepted state.
Then when the band closes down again, I can spin the dial and hear
practically no one. Which would suggest that the "legal" users are not
using the band, even when the obviously illegal ones cannot. While this
evidence is empirical in nature, it is of sufficient quantity, and
occurs regularly enough to make for a compelling case. The evidence
supports my claim. I see no evidence that would support yours. All you
have said is that it doesn't happen. But that proves nothing.

>
> The vast majority of CB users are law-abiding people.

On what planet?

> A small fraction
> of those people venture outside the "legal 40" into Freeband, and a

Really? That small amount of people must really get around when the skip
is running.

>
> MOST Cbers don't use amplifiers; MOST CBers don't use echo boxes; MOST
> CBers don't venture out-of-band!

Really? Tell that to the cretons on channel 6, and the other mental
midgets that try to squeeze a 10KW transmitter into a Ford Escort. Oh,
and that "bottom-of-the-canyon" sound that is prevelent on channel 19
and many other channels is just room ambiance, and not an echo mike,
right?

>
> Apparently you can only hear the over-powered, echo using ones. Is

No, it's just the way it really is. Sorry that you either refuse to see
it or can't.

>
> You, sir are woefully misinformed. But you expose your negativity
> every time you post, so it comes as no surprise.

I am only reporting what my receiver tells me. I find it somewhat
curious that you vehemently deny what should be obvious.

> If you really want a place where "breaking the law is the rule rather

I'm not "worried" about our image. I was merely commenting on a previous
poster's concern that the statistically few "bad" hams were giving U.S.
hams a "bad" image. My comment was that if a few bad hams was bad for
our image, imagine what a few million "bad" CBers are doing to their
image, as their overmodulated, overpowered, and out of band signals were
being propagated throughout the world.

> why they don't?

You are correct WRT the HR 2600, but I've never seen an HR 2510, that could not be modified by the method you outlined previously. Uniden did some half-hearted attempt to appease the FCC, by covering the "mod" pins with rubber goop (that could be easily removed), and including printed "warning" sheets with the radio, outlining just how "bad" modifying the radio would be. I think even later versions had the pins cut, but if you were tenacious enough, you could tack solder a resistor lead to the pin "stubs".

I agree that the HR 2600 should not be included on the FCC's "hit list", since it required a chipswitch transplant before it it would do anything illegal.

>

That would seem to be the obvious answer. Except that it's all about
marketing and making a profit. The radio manufacturers really do not
want to make modifying too hard because they know that the illegal CB
market is their real money maker. Radios like the radio shack HTX 100
and the newer HTX 10 would bear that out as neither were very popular
with the illegal 11 meter crowd, and sales to hams alone do not seem to
justify its continued manufacture.

Lets face it, we are a tiny segment of a little segment of an even smaller segment that barely exists as far as the world is concerned..... to understand our world one must live in it, as most of you reading this do.
Whether you post once a day or spend all your time here posting, there has been a familiarity
among us caused by direct interactions with each other on a daily basis, some pleasant, others not.
Many are faceless and even more are clueless, Dick was not. He was as real a part of our everyday world as any. Like him or leave him, Dick was a presence on the board to not only be emulated, but to be remembered as true elmer. When Dick had something to say, he said it.
His patience was surpassed only by his skill and adepteness.
His comprehension of not only radio but of human nature was remarkable, as he knew what makes many of us tick. He laughed with us and sometimes we laughed at ourselves, and Dick was always to be counted on for a unique perspective view, one that was refreshing in it's own manner
Dick was a ligh in the room that will be sorely missed.
He didn't frequently remind of his educational status background, or accomplishments.
His many posts speak for themselves, drawing from the knowledge he had gained from years of experience dealing with radio and people, from the green newcomers to OT'ers opposed to...well.....anything.
He taught many of us many things with a zest for a willingnesss to help.
Fare thee well, Dick. Rest in Peace

From: aa2qa@frontiernet.net (Jim Hampton)
Heck, Twist, you go on about us Yankees - go up to Canada for REAL fish!
73 from Rochester, NY
Jim
<<

Got me there, Jim. I've acknowledged the great fishing once we all get above the stench of the northeast's industrialized zones..Steelheads, Muskie, Pike, etc..,,,,,,,but for freshwater...I'm a a bass fisherman. Over the weekend, a Tarpon (at least 5 ft.) was hooked from shore (on an island) by a member of our small band at approximately 1:30 AM. He was freebanding, er, ah.. I mean freelining a live greenback on 12 pound testline when the fish did his thing. A valiant battle was fought and at approximately 2: 30 AM, after an hour of battle with the Silver King when he was only about 10 yards from shore, the line popped, and the drag wasn't tight at all, being semi-loose from fighting this beast for over an hour. The fish was tired out, but when he felt the sand on the bottom against his belly, the silver monster gave one last effort for deeper water, and it worked...he came up out of the water, did his famous dance across the water while standing on his tail that Tarpons are known for and disappeared......he now has a number.
The northeast (parts of it) is beautiful.............in the summer. Come winter time, I think y'all are paying for some bad Karma or something.

Source record: 134196

>Support for that statement should be obvious to all but the most blind
and those in the river nile. <<

Read: Anyone who doesnt see it your way.

>Listen to the CB band during a "band opening". On it you will hear
stations from 25 to 28 Mhz, ALL of whom are operating illegally. Tune to
the regular 40, and while observing that signal levels are higher than
what would be obtained from a legal station 2 miles away, it becomes
obvious <<

Again, it is "obvious".
Obvious only to yourself.
It's the little green man in your head.

>that these stations are running excessive (illegal) power. Further
analysis would show that the modulation level and the amount of audio
distortion is further evidence that the radios have been modified from
their original (If the radio was ever legal) type accepted state. <<

Your failed analysis was shared with us several times, such as when you
attempted to
spout off about this skip period in contrast to the last one with what
you obviously considered "scientific" comparisons.
Most recently it manifested when you began arguing with yourself over
the fact that the Belgium Observatory was inaccurate concerning sunspot
data simply because it was I that had to educate you on the matter.

>I'm not "worried" about our image. <<

Obsessed is the word that escaped you.

>I was merely commenting on a previous poster's concern that the
statistically few "bad" hams were giving U.S. hams a "bad" image. <<

They aren't "giving" as in a verb action word, it's the needle and the
damage done.

>My comment was that if a few bad hams was bad for our image, imagine
what a few million "bad" CBers are doing to their image, <<

Hehehe! No, YOU imagine it. It ilustrates well what you hammies do with
your spare time.

>as their overmodulated, overpowered, and out of band signals were being
propagated throughout the world.
Dave
"Sandbagger"<<

Sounds like you have another issue or personal problem that needs addressed, but you need inspect your behavior first, find what it exactly is that compels you to insult instead of discuss in most of your posts concerning your obvious and pious disregard for cb.

You say you're a truck driver...

Ok..

Who do you drive for?

How many sets of brakes are there on an 18-wheeler?

Define the difference between a range selector and a splitter.

Now, state again how "all" truck drivers like to run overmodulated,
roger-beeping splatterboxes.

>roger-beeping

Roger beeping is commonly used by fags so it's easier for them to
identify each other when on the big road. That being said, the echo
disguises the individual fags voice, just enough so that straight
hetero friends of the fag driver don't recognize his voice.

Roger Beep= faggot beep
Echo = Nope, that wasn't me you heard the other day talking to the
other fags on the road.

I wanted to tell chapwoman something about how IMPRESSED I am with his feminine wiles. That IP trace is REALLY something...of course so is a pile of horse turds...for you they are likely a food supply. Chapwoman the ham traitor. All you keyclowns lift your limp wrists high in salute to him. He is unquestionably
the brains of your outfit.

We own it dudes! You cannot stop us. We shut down yer auctions, we reveal your feminine sides to the world, we get ya all pissed off...

But ya can't do anything about it.

3rd anniversary of the AKC is coming. We are still here. We challenge you to stop us repeatedly, but you cannot. Impotence, it's not just for old farts, it's for keyclowns too.

Keyclown Buster,
Are you really an amateur with a licence?
I hope the answer is no... because if you are... you are disgracing all of ham radio with your badgering and misbehaving.
You're supposed to be the "elite" of the radio world and this is how you show guidance to CBers?
You are no better than the people you attack... in fact... you're much worse.

If a ham is operating on CB, he is subject to Part 95. He is NOT a ham
in this instance and need not be concerned with Part 97. He is a CBer.
What part of this don't you understand?

NOT irrelevant. You are (allegedly) a no-code Technician and cannot operate on 10 meters anyhow. Why the obsession with so-called "intruders" on ten meters? Unless you bootleg there. And please answer the question this time.

> >The HR2510 is perfectly legal for 10 metre use.
>
> Wrong again. See below.

Note: He has stated that a 10-meter radio is "illegal" for use on ten meters. Which makes his later statements lies. You lose, Aanal Aaron!

I'm not the one "trolling", Aanal Aaron. And why would you ignore me?
Afraid of the truth?

Why not answer some of the "hard" questions that have been asked of
you recently, like "why the obsession with cleaning up ten meters"
when you're not licensed to operate there? And it's NOT irrelevant,
except to you.

But that's a tiny number of operators, Jerry. Why get all freaked out
about it? There are other frequencies you can use, if necessary.
Doesn't your radio have a Tuning knob?

OK, so it's fine for this person I was responding to to mock hams with HIS
view of hams, but not
OK for me to respond in kind? I responded in the same way he posted. There
are stereotypes to
be found in ANY group. Ever seen the stereotypes of computer "geeks"? How
about nerds with
thick glasses, heavy acne, pocket protectors, hmmmm? If he can say that
most hams are old,
fat, and obsessed with ham radio, then I can come back with the twin "whups"
and rusty old car
thing.

And that's exactly what you and Aanal Aaron are doing in the wrong
newsgroup, isn't it? You're certainly not here to make friends; you're
defending your "turf". And you and Aanal Aaron are certainly "control
freaks"; that much is obvious from your posting. Why don't YOU just
move a few kHz?

He certainly can. The retailer just cannot "import" anymore. The
existing radios can still be sold. You cannot grasp the simplist
point, can you?

Any random length, going around seats, over obstacles, under carpet, under
door channels
will do. I posted the proof in the first thread which no one apparently
read. I have a meeting to go
to and I will prove that coax length is nonsense when I return in a couple
hours.

Lou,

28.755 falls within the amateur 10 meter band. It is not one of the
"expanded CB channels".

This oughta' be good. We get to hear the story about the
screwdriver antenna again that works from 1.8 to 30 MHz
with 7 feet of coax! <-;

```
That's right Tnom. They are NOT "illegal" to use. Just in 1977 after
a certain date they wanted to clear all the old 23's out so they put a
date saying that the shops THEN couldn't sell them after a certain
date--they wanted 40 channels CB's sold after that time.

IT's FUNNY--In my post and in my latest "goldmine" I got NO nor listed
any 23 channel CB's! And as far as the idiot "not caring," then WHY
did he complain to the NG head about me? He seems to have a DOUBLE
MIND ! What so offended you--that I would list to try to sell OLD CB
stuff that I obtained this week, like I have always listed in times
past, or do you have deeper HATE for any AMERICANS out here on the NG
that don't abide by the 6th plank? WHAT IS your problem? GOT LIFE ?
GET ONE!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
!!!!!!!!!!!!!!

Question is this - how many of the many dozens of posters are freebanders? And how many are not, but put posts out just to flame the AKC (and why)? And who wins what with the flame bait? There are a lot of good folks out here that are legal - and I'm not a cop. Of course, there are a couple of hams that ARE (but not the federal kind). Hmmm ... who is it, W2COP in Fairport (I think - I'm not going to qrz.com to look it up)? Heck, send me some of the URLs. I don't think I've recommended modifications of radios (doubtful you'll wring much more out of 'em anyways since overdesign of the rig would result in excess cost - which would result in someone loosing their job); likely you'll end up with more rf - all in the wrong places. In any case, some of us aren't afraid to use our real name or real e-mails; however, just in case you're local (likely not), feel free to give me a call on the 444.850 machine - if I'm on the air, it's usually there. Oh, also the N2HJD machine - lots of ports, take your pick.

73 from Rochester, NY
Jim AA2QA

BTW - I certainly do NOT agree with Rabbit Ears who deserves what he gets - but the biggest charge against him is not a felony (although he can get up to 8 years and $80,000 in fines, no small sum).

Agreed, Jim. For the most part, freebanders don't interfere with hams. I was one once. It's only the pure morons that have a real problem with someone that has no influence on what they or any family members do or pursue. They can see no shades of gray, only black and white. It's really sad for some of them that the FCC doesn't see it the same way. If they did, there would be no arguments here. The guilty know who they are.

Just who is going to make such a rule and just how do you plan on
enforcing it? Even if you decide on such a rule it carries no
meaning whatsoever as you cannot just make up some rule you want
to apply to a Usenet newsgroup.

Why so a few illegals can use the frequencies I have a legal right to use.
Sorry Dick head perhaps your willing to compromise
yourself since your not a ham and have nothing to lose. Why don't you post
your call sign? Oh whats that your not a ham.

The real sad thing is that the constant flaming drives a wedge between the groups. I see no real problem with folks enjoying radio - be it amateur, cb, frs, or murs. Obviously, there are different needs. Some want the frs units between family members - perhaps at an amusement parks; others for the 'honey do' stuff - 'don't forget the bread' (cb, amateur fm, murs). Some people like DX. Methinks we should all quaff a tall cool 807 and take a chill pill.

73 from Rochester, NY

You judge me as an amateur for what I say on here? That shows how
stupid you are. How hypocritical as well. Griffwad, you are a federal
criminal, and you had better understand well that The anti-boys will
never let you forget it.

If you think we are disgracing radio I suggest you find a mirror,
criminal.

I have proven my point again, about how keyclowns will say anything to
divert attention from the fact that they are ILLEGAL.

Your assistance is appreciated, Griffwad.

So does the 'pile and so does Texas. Frequently.

But not on an Daily basis, even with the cycle on the low.

>east coast, Canada, <<

Almost Daily.

>Alaska, fishing boats working off shore and best of all.<<

Fishing boats with cb? <g>

You betcha, I know of two people that have nice set up's.
I remember one Sunday afternoon sitting in the garage, cleaning
with the radio on. I have it on scan the freebands and hear some
people talking really faint. I yell to them and low and behold
they are a small fishing fleet off the west coast of South
America, pretty cool I thought.

Useless drivel snipped

Yes Jim, you have been busted by Doug Adair, self
appointed vigilante (next to Aaron) of Rec.radio.cb.
He's trolling, just like Aaron and a couple others, so
don't pay much attention to him and he'll get his latest ISp
yanked because of hate filled, innuendos type of posts.
He came out here trying to sell modified radio gear, got abused verbally
and feels because he's behind a keyboard,
he can type whatever fantasy comes to his mind.
KILL FILE HIM, it's the best thing for him.

5336. COMING SOON! "Keyclown Madness!"

Newsgroup: rec.radio.cb
Date: 2002-08-27 04:10:48 UTC
From: keyclownslamma@yahoo.com
Message-ID: <d1e9cf6a.0208262010.6d4132b0@posting.google.com>
Source record: 134364

A new CD with various comedy skits that totally ridicule keyclowns!

Anti-Boys Productions will introduce this awesome CD by December, just in time for Christmas!

KEYCLOWNS LISTEN UP! don't give your light loafered he/she fellow keyclown something boring like a tube of anal ease or thong underwear AGAIN this Christmas! KEYCLOWN MADNESS will be the hit of any keyclown holiday gathering!

Proposed titles of skits:

1>Trainedpuppet discusses winning a gold dildo from Twithed.

2>Brian Griffey and Ozark333 talk about their childhood experiences.

3>Dweebo re-enacts his wedding night with twithed.

4>Secret recordings of twithed's childhood. Actual recordings of him beating
puppies, using kittens for fish bait, and playing hide the salami with male
relatives.

5>Landshark's childhood: The lunch money muggings, the beatings by his older sister, his fascination with telling on other kids.

It is all in the planning stage now, but your owners the Anti-boys do have great audio recording facilities, and do seriously intend to release a record about you all this year. By the way...All voice tracks will be recorded with a 1968 vintage UG8-D104! You can get this record for FREE! SERIOUSLY!! ALL YOU HAVE TO PAY IS A LOW S&H CHARGE!! We will also include some really cool classic keyclown music! TWITHED WENT UP TO JERSEY, TWITHED PUPPET, and 1 or 2 NEW RELEASES!

Your owners want you to have a happy holiday season...FREE from Anti-Boys records!!!

Not gonna happen. You have a couple of mentally estranged punks that don't have a clue how to be human, dictating rules to the rest. Common sense is what they lack.

BEGINNING OF SUKKEE BOY'S RETARDED POST
Name:
DOUGLAS W ADAIR aka Keyclownsslamma,useless phat phuck unemployed dipshit
Addr1:
504 EUCLID AVE ......until the rent comes due
Addr2:
TOLEDO, OH 43605
Country:
USA
Effective:
19 May 2001 Expires: 16 Mar 2003....OH YEH,BIG TIME HAM RADIO OPERATOR....NOT!!!
You know this asshole is known very well on the cb band in the Toledo area...Thats right shithead....Got the goods on you from a CB shop at xit 5 off I-800...Your voice is just as recognizable on cb as that faggot ridden repeater you make an ass out of yourself on.....very soon I will have a list of all the the illegal equipt you own or have owned
You better clean house soon pal...the report is on you now.....You must be stupid not to think local hams dont listen to cb
END OF SUCKEE BOY'S RETARDED POST.

---

1. Doug has not talked on 11 meters and has not since the 1970's.

2. The CB shop at exit five of I-80 has been outta business a long time.

3. Doug does not own any illegal equipment.

4. Your post is so TOTALLY unoriginal. All that stuff has been said before.

5. Your bio is wonderful. We love it and laugh daily.

I just want to know why Voobner is so obsessed with illegal CB operations, especially as it appears that he is neither a CB'er or amateur operator. If I were a psychologist, I would have one hell of a case study here.

From: xganon <remailer@xganon.com>
Message-ID: <ea4d7602d53c82e5a4151e903eca9bfc@xganon.com>
Source record: 134373

Twistyfag's vacation diary...

Day 1. The drive is hot and tiring. The only consolation so far being the cute truck driver who mounted me in the TA's bathroom...my ass still hurts a little from that. I sucked his dick after he slammed me, so I could get the last drop. Love that shitdick taste! After dark my FUGGLY kid made gas money for us by blowing 2 drivers in the TA parking lot. He came back and kissed me passionately so I could taste what he got to swallow. Yum Yum!

Day 2. On the road again! Pulled into Baltimore area! Yeeehah! the REAL fun started!! GayScottiekins was there to meet us at the gay bar! My FUGGLY kid blew him immediately! GayScottiekins had reserved the room downstairs, so after doing some drugs and getting drunk as hell we went there for a threesome! Some heavy doody double ended dildo action with Scottiekins...that boy is a first rate queer! My ass got so sore he licked it to soothe the piles.

Day 3. Woke up in the room under the gay bar. FUGGLY kid stil snoring away. Noticed the kotex he had in his shorts. Scottiekins musta still had some steam up after I passed out. Rolled a joint and hardly took a toke before the door burst open. All the no name amp guys were there! I blew and got buttfucked by Lowrider667. FUGGLY kid and Scottiekins took on the rest. What a party. Got fucked up outta our minds on crack and weed. Washed it down with several glugs of MD-20/20 and some hot jizz. A perfect day!

Day 4. New Jersey Bound! Just a quick stop here, as I had already lost a solid gold dildo in a sucking contest with Faggotboy trainpuppet the trained puppet last year. Couldn't resist the chance to have Dennis O. suck me off though! Trainpuppet the trained puppet showed up and gave me a good ass slammin too! FUGGLY kid went down on Dennis to complete the circle! A very exciting morning! Had to get on the road though, lotta fun coming up in Ohio! Dennis promises to come down to Florida and get blown next year! Awesome!!!!

Day 5. Pulled into Cleveland and was met at the Petro by PeePeeHolic. Went to his favorite gay bar, where we held an auction among the local Bowl guyz for FUGGLY kid's asshole. K8CPA was the winner! How exciting! Chukkeesukke drove in from Detroit just to bid on FUGGLY kid! How cool! Went to PeePeeHolics basement BDSM dungeon to tie FUGGLY kid on a rack so Chukkeesukkee could mount him. FUGGLY kid cried, said Chukkeesukkee is WAY to ugly to mount him. I pointed out the obvious, with my superb logic: a)We need the money. b)Chukkeesukkee has a little dick, so it won't hurt much. FUGGLY kid dried up the tears and snot and actually got into it. After Chukkeesukke finished, PeePeeHolic rimmed FUGGLY kid

and got the last drop. It was fun to watch, and I had a great time with PeePeeHolic's hamsters.

Day 6. On the road early, after a brief stop at the Urgent Care Center to get FUGGLY kid's anal fissures stitched. Turns out Chukkeesukkee had been using a penis pump, and had grown considerably from the last time I blew him. Heading to Chicago now...about a 6 hour drive ahead of us without any gay sex...gonna have to blow a truck driver in a rest stop or SOMETHING!

Later in the day: We arrive in Chicago!!! WHOOOOOOEEEE!!! Now Adam and the other faggot amp makers in the SW side are all over us! FUGGLY kid and me sucked off everybody at X-Force! What a great day. Since we did them all so good they gave me a 2879 to replace the blown one in my 1 pill. Bedding down tonight in a homeless shelter in Chicago Heights! I forsee a lotta opportunity to make a few bucks there, since there are a lotta dirty, grubby types that the average gay whore just wont blow.

Day 7. Halfway finished with our romantic trip! Now off to Missouri! That sexy pink muffin Ozark333 and me are gonna do some serious sexy horizontal mambo! He has offered a hundred bucks to take pictures of FUGGLY kid blowing his Rottweiler; we just have to stop and see 333. That 333 is kinda stupid, ya know? If he would have asked ME to blow the dog I woulda done it for free. FUGGLY kid gets all the fun stuff!

8:00PM: We arrive at 333's trailer park. How exciting! His trailer is a lot like mine, but you can see he is a lot wealthier than me. He has FOUR junk cars in the yard and THREE dead refrigerators on the front porch. MAN! Ozark met us at the driveway so he could guide us around all the piles of dogshit in the house. After brushing off the roaches from the bed, we leaped in for a threesome! FUGGLY kid rimmed Ozark and I gave him head! The Rottweiler was furiously scratching to be let in, so Ozark set up the lights and FUGGLY kid made his command performance! How exciting to know that FUGGLY is gonna be a star on the IRC porno channels! Ozark sez these pics are hot items!

Midnight: FUGGLY kid is snoring contentedly with the Rottweiler.
My asshole hurts so bad from Ozark using an inflatable plug
it just aint funny. Sleep now...on the road again bright and early.

Unbelievable!
You would think the other hams would police their own and remove people like Dougie, Aaron and Chuckee from the ranks for totally disgracing the hobby by using badgering and filthy language to make their points...
Either the other hams are not aware of these rebels, or ham radio has deteriorated significantly from what I remember.
Either way, I can see why the interest in ham radio has eroded...

Electrolysis between the two metals would occur over time. You could coat the copper by tinning it and this will hold it for awhile. However, the tin would eventually leach away leaving only the lead. The lead makes a really crappy electrical connection and a pourus one at that.

Better you should use those inexpensive clamps from the hardware store.

>Yeah, but you get to work Hawaii, <<
>So does the 'pile and so does Texas. Frequently.
>
>
>But not on an Daily basis, even with the cycle on the low.

shitttttttt, try on a daily basis now and at least since 1992 with the exception of about one year around 96 or 97 when it was a absolute low and then we were still able to talk to our friends in the carrieban and down south

>>east coast, Canada, <<

who would want to talk there? haha i get tired of heraing guys go "Eh" after evey syllable

>>Alaska, fishing boats working off shore and best of all.<<

sounds good. i work two Kp stations up there pretty often. one from a aeromobile more often than not so its alot of fun.

i think no mater what part of the world your in you'll have some good dx on 11 meters. its just that type of band. i do enjoy where i'm at though. in the early morning far east europe rolls in faintly and peaks around 9am and then starts to shift towards the western europe countries which peak around noon and by about 2pm were full blast witht he guys from south africa on the cb. by the time 5pm rolls around and all the dx has shifted out west were going strong into hawaii and the south pacfic area. i'm lucky enough to kinda get the entire world and all continents from here.

Hello,

We have now in stock an extensive range of high voltage transformers
for valve amplifiers and other valve equipment. 230V primary and
secondaries for both anode and heater circuits.
Also filter chokes of 10H 50mA, 100mA etc. up to 10H 400mA.

Pictures, technical data and price can be found at my web site -
www.demostenes.no

Best regards,

Arnold Goks&#65533;yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

Problem is, reminding someone that posts illegal amps for sale that
they are illegal is not "badgering". You sound a bit grumpy to me,
Brian. Illegal CB amps not selling well this month?

I complained to groups.google.com - about the keyclown to groups-abuse@google.com - the proper procedure to complain to google (and they seem to take complaints seriously) is to forward the abusive message with headers to the above mentioned address. I think they take complaints seriously.

Not that I like keydown operators - I don't like the imd their amps generate, but this guy is getting annoying.

Twist,

You put it into words a lot better than I ever could!

We used to converse with each other via direct e-mail quite
often just to stay away from the bias of this newsgroup.

We have 'silent' keys in amateur radio, and now I have a
'silent' email address:

"Richard McCollum"
<rmccollOMA@worldnet.att.net>

which used to belong to someone I will truly miss.

Maybe we can all convince Bill Eitner to add a list of
'silent keyboards' to the FAQ for this newsgroup.

Regards,

Dennis O.

Prove it.

Tune to
> the regular 40, and while observing that signal levels are higher than
> what would be obtained from a legal station 2 miles away, it becomes
> obvious that these stations are running excessive (illegal) power.

Prove it. Propogation will call you a liar.

> Further analysis would show that the modulation level and the amount of
> audio distortion is further evidence that the radios have been modified
> from their original (If the radio was ever legal) type accepted state.

SOME radios. You cannot prove ALL radios have been modified. And it
simply is not the case.

> Then when the band closes down again, I can spin the dial and hear
> practically no one. Which would suggest that the "legal" users are not
> using the band, even when the obviously illegal ones cannot.

Which proves? Is this supposed to prove that every CBer is a criminal?
Sorry, it doesn't. Your point?

While this
> evidence is empirical in nature, it is of sufficient quantity, and
> occurs regularly enough to make for a compelling case. The evidence
> supports my claim. I see no evidence that would support yours. All you
> have said is that it doesn't happen. But that proves nothing.

And you have proved exactly the same.

>
> >
> > The vast majority of CB users are law-abiding people.
>
> On what planet?

Since CB only exists on this one, I think that's obvious.

> > A small fraction
> > of those people venture outside the "legal 40" into Freeband, and a

> is running.

They do - if that's ALL you listen for. Apparently you're as obsessed
as Aanal Aaron, Jerry Ox, and the elusive "Dirty Sneakers/ME". Try
listening fulltime instead of citing only what supports your alleged
arguement.

> >
> > MOST Cbers don't use amplifiers; MOST CBers don't use echo boxes; MOST

> right?

Channel 6 is known for that. You still have not proven that the
majority of CBers are "criminals", and you cannot.

> > Apparently you can only hear the over-powered, echo using ones. Is
> > that a bad receiver or really selective listening?
>
> No, it's just the way it really is. Sorry that you either refuse to see

Bullcrap. You haven't listened to 11 meters, have you?

> > You, sir are woefully misinformed. But you expose your negativity
> > every time you post, so it comes as no surprise.
>
> I am only reporting what my receiver tells me. I find it somewhat

Likewise. You have extremely selective hearing.

> > If you really want a place where "breaking the law is the rule rather
> > than the exception", try driving on almost any highway.
>
> Irrelevant.

No, it isn't, but you'd like it to be. Just like Aanal Aaron saying
that the fact that he cannot operate on 10 meters is "irrelevant".
He's not licensed to operate on ten meters - and it's NOT irrelevant.

>
> > > > after all the guys on the ham bands are making our

You're not worried? You should be!

The proportion is about the same whether amateur or CBer. There simply
happens to be 30 to 40 times as many CBers as there will ever be
licensed amateurs, so it SOUNDS like a bigger problem. That's all. Why
not try to enjoy your hobby instead of making someone else's hobby a
pain in your arse like Aanal Aaron and Jerry Ox do? And since 11
meters doesn't propogate all the time you have no reason to be
terribly concerned. You need a life! That's all.

I don't need a football helmet. That was Tom. I know the truth; Aanal
Aaron will do his patented "chicken side-step" whenever he can.

But thanks for asking!

I think Tim knows the difference; that's why he made the post. If the
alleged hambos worked as hard to clean up their own bands as they
claim to be working to clean up CB, the world would be a much better
place. And we wouldn't have to put up with their stupidity on this
newsgroup, at least. (I wouldn't miss them a bit, personally.) But
Jerry doesn't dare post a callsign, George can only post bullcrap
snipes, and Aanal Aaron can't possibly be studying for his "extra"
since he spends so much time trolling here and cruising eBay for
so-called "illegal" auctions.

No your not magic at all Tim you have no techincal skills thats why when pressed for any technical answer you allways give us your opinion or call it magic I guess. I have a scope hooked up and can tell an over modulated signal better than you can, when the person talkin says thay have a 3 pill or a 5 pill or 8 pill i would consider that signal over powered, now again how do you know what a 4 watt radio sounds like at over 1000 miles away on AM?

You just did?
QRP is operating your station at less than 5 watts output on CW or 10 watts
peak power on SSB

Yes I imagine there are Tim nebo rings a bell, since your not a ham I am sure your another freebander on the HF band.. btw My Point Dick Head is that your telling Jerry to just turn his dial if he hears freebanders why should legitimate users have to turn anything to escape a freebander infringing on our rights. As far as me being an idiot if you didnt try so hard to be a troll you would see what my point is regarding your Idiotic statement that a legitimate Ham should have to turn his dial to escape a Illegal operator . Your more of a Dickhead than I thought. Dick

You must be on drugs or something. You are operating illegally.
CB starts at 26.965 to 27.405, anything out of that is illegal. They
could call the FCC on you and you could go to jail.

Turbo Tuned Radios are illegal and put out more than 4 watts try agin Nebro. So your saying phase shifting accounts for splatter and a distorted over modulated signal? Interference does nothing to a show an over modualets clipping signal. As far as a radio out of the box normally they would sound fine since the limiter is still intact and they are probably under 100% modulation, and 4 watts .. Next

No trouble with reading again Dick Head? Your the one who wants someone to
compromise something not me I stand up for what is right, you seems either
don't care or look the other way.

> I *am* a ham. What's your callsign, smelly shoes?

You are ? whats your callsign If I remember correcty you told aaron to post
his callsign since you didnt beleive he was a ham. I am asking you to do the
exact same thing as you requested. That is a far question Yes or No I mean
if you say no then you are another hypocrite to grace the rec.radio.cb NG.
btw you also said you have nothing to hide which is it you do or you don't
or are you just to much of a pussy. As far as mine look on google archives
or just ask one of the regulars I am sure you have seen it posted here many
times. So the question remains whats the callsing Good buddy

That's a good question that I'd like to see answered. As a ham, I can understand those who want to keep illegal operators off the 10 or 12 meter ham bands. I have no problem with that. But I can't understand why some here are taking up a crusade to shut down every illegal operator, whether they're on the ham bands or not. Unless someone's running a kW next door to you and splattering their signal from DC to daylight, who cares? Who cares if someone operates on 27.555 with 100 watts? It's not bothering me any. I have found a few intruders to the 10m band, but all of the freebanders I used to know knew enough to stay below 28 MHZ.

I agree... I certainly don't condone "bootlegging" on ham bands. I think
that is a violation that ham operators have a legitamite gripe with.
Although I normally run more power than allowed, I make it a point never to
do that. I also make every attempt to conduct myself in a acceptable manner
and do not monopolize any frequency when on the CB, unlike many others.

I've been a Windows XP Pirate ever since I downloaded XP Corporate Edition form Kazza and now my inner soul wants to settle the score and make things right.

I used to be a Linux user but after I tried my free copy of Windows XP there was no going back to Debian.

Linux was taking up more of my time than selling DaveMade Amps on the side.
You see I am just on the wrong side of the law and I want to come clean.

I've been a closet keyclown for a long time now.
I've flatulated all over the Ham bands using my pirated version of Windows XP.

To clear my name I am going to post my reg key so all can know I am truly a keyclown, cb'er good buddy.

fckgw-rhqq2-yxrkt-8tg6w-2b7q8

I'm going to switch to a McIntush so I can pay real money for legal software that works.

Don't even try Linux because it really sucks, worse than XP.,

Terry Porter

Got to the root of the problem---or at least what makes the antikeyclowns tick, anyway. We can print cusswords in books & papers, put them on albums & sell them... but deep in the American psyche, there is something that says "the airwaves are holy---thou shalt not defile them with cusswords, lest thou incur the wrath of God". This mentality probably originated in the prim-&-proper '40s, and most censor-minded individuals don't want to be identified as killjoys.

I think Aaron (or whatever name he's using this week) would agree with this assessment... albeit I happen to think those of us who really think of the airwaves as "holy" are off their rockers. (Yes, there really are old geezers who obsessively watch TV and pester the b'cast stations with phone calls every time they hear a cussword.)

AFAIC I wouldn't get any sudden chest pains from hearing Dan Rather say "fuck" on the 6 o'clock news, much less hearing Speedy say it on 27.035. What are the censors going to do when our fat old lawmakers have all died---and get replaced by today's foulmouthed keyclowns? Their success would be the best revenge.

Guy Richards

Source record: 134510

Just wondering........ How many of these cry babies speed while driving to or from work? Isn't that illegal also? But they do it anyways, right? And you don't see me or other folks out there calling Johnny Law when they speed on by and or cut someone off DO YA? I don't think so!!!!!! But that is just fine with me cause there is going to be a day when all these frequencies are going to be open to the public anyways. Just look at the cb, the FCC couldn't stop people from using the AM legally with a license so they drop the license. So what are they (Ham Operators) going to cry about when everyone will be allowed to use these so called licenses only frequencies to cause hate and discontent like is done on channel 19? Just think about that one for awhile.. It is only a matter of time!!!!!!!!
As it is now you folks are loosing frequencies cause no one is using them. Hell all of the old timers are dying off and none of the new generation care about radios. The new generation uses computers to communicate, just the same way you people are doing right now in this newsgroup! Just think about that for another minute or two!
So why don't all of you old time so called ham operators go back to your radios and carry on a conversation with other folks just like yourselves!!!!!!!!!!
Just look at the name of the newsgroup, I don't think the word ham is in it anywhere. Oh but I know your way of thinking (hams) and you are going to tell me the word radio means "hams" right? Well before you do that radio also means stereo all so. But I don't see anyone posting questions about there stereos in here, do you?

My 2 cents, Scott

This amp is a 10!
new caps (8) 470@450v
New board for caps
New full wave HV-8 high voltage rectifiers (2)
New Plate Choke
New Plate cap resistors
New Doorknobs
New Band switch
New Omega electronics Tuned input board
New Powercoat on the cabinet not a scratch on the face.
New Choke
New Bleeder Resistors
4 full output Taylor 572-B tubes
Have manual and paper work from omega for tuned input board.
This amp is better than new.
600.00 + shipping
thanks for reading
chris NI4L

I care - when I can some splattering amp from a guy on cb channel 6 as far
away as 12 meters several states over I think it is a problem.

Next time it happens I'll take photo's of the scope and record it.

Its the amps they use - some of the cheaper ones suffer so badly from intermodulation distortion that their signals are sometimes several channels wide - to in extreme cases several mhz wide. I really have heard cber's who were on channel 6 way down in 12 meters - not just in my same town, but from the coversation I've gather several states over. These class C amps are made by people with the direct intention of being used on the citizens band.

cber's are famous for disabling audio limiters, turing up mic gain - stuff like that.

as a real amateur operator thats my beef with outlaw cber's (skuld@mail.ru)

I have found that Windows is preferrable to Linux, but Macintosh is preferrable to Windows. I just don't have the time to deal with broken shit. Linux's brokeness is ok because of programmer types who can fix it, but Windows fucks up no matter how well you have it tuned. Current Macintosh computers has never screwed up under my use.

No, we don't hate them. Yes it affects US amateur radio. BooKoo qrm
from export rigs on 10 and 12 meters. Also, high power RF on CB band
tears up whole neighborhood's
home entertainment devices. Also, operating on illegal freqs
interferes with other services who are legally entitled to be there.
This is all so obvious that I never thought anyone would ask the
questions.

Another person brainwashed by the "cheaper and more widespread is better "
Microsoft subliminal programming.

>
> > I just don't have the time to deal with
> > broken shit.
>
> But you DO have the time to find useful Mac apps?

I am a damn good investigator. I have found all I need in a short amount of
time, thank you very much. At least Mac apps don't crash for me.

>
> > Linux's brokeness is ok
>
> No.

Best you could do? Well I'll do better. Linux is made for people who have
the time to learn how to use it (implying patching it up to their own
specifications, or PROGRAMMING. Linux should NOT be marketed to the average
Joe or Jane.) I tried every single major distro of Linux, and guess what, I
didn't have the time to get it working right. I needed a computer; not a
frelling project to work on for a couple of months.

>
> > because of programmer types who
> > can fix it,
>

Prove it. Oh wait. You can't. Even Bill Gates himself and his
demonstrator, at a Microsoft Expo, got a blue screen. (See
http://cnn.com/TECH/computing/9804/20/gates.comdex/gates.30.160.mov) You
cannot deny that; the movie is proof.

>
> > Current Macintosh computers has never screwed up under my use.

Main Entry: in.san.i.ty
Pronunciation: in-'sa-n&-tE
Function: noun
Date: 1590
Inflected Form(s): plural -ties
1 a : a deranged state of the mind usually occurring as a specific disorder (as schizophrenia) and usually excluding such states as mental retardation, psychoneurosis, and various character disorders b : a mental disorder
2 : such unsoundness of mind or lack of understanding as prevents one from having the mental capacity required by law to enter into a particular relationship, status, or transaction or as removes one from criminal or civil responsibility
3 a : extreme folly or unreasonableness b : something utterly foolish or unreasonable

For them, it makes complete sense. In times past, they would have been good candidates for lobotomies. Today, due to political correctness, they are tolerated.

> you getting any of this, or are you stupid?

Hm. If you come in on the middle of a thread, then that means that you read from the middle to [x] location. Not top to bottom. Relative top, yes. Absolute top, no.

The way I see posts (IN A MICRO$OFT PRODUCT!) are in a directory-tree format. The replies to the original message are the branches, and then replies to those replies are then sub-branched. I reply in a newsgroup to the person I have a beef with. I don't reply to the original sender. I believe THAT makes my posts hard to follow. If I were a third party looking in, using this program, I would have no idea why replies were being set to the original post (that had nothing to do with my reply's argument.)

Any problems you have with my frelling posts should be directed to comments@microsoft.com . Please put Outlook Express 6.0 in the subject line and bitch to them about the way that they display newsgroup postings. Maybe they will change the way they do things. Then again, they probably won't. M$OE has been this way for as long as I've been around.

When these illegal operators encroach into the ham bands, yes it
does have an effect. They have done nothing to earn the privilege
of operating on ham frequencies, the hams have.

Oh really, look again, the hams are gaining frequencies.

5471. The passing of Richard McCollum

Newsgroup: rec.radio.cb
Date: 2002-08-28 04:43:03 UTC
From: Dave McCollum <dmccoll@radiks.net>
Message-ID: <3D6C55A4.AEFA5860@radiks.net>
Source record: 134399

To all who read this:

I am Richard's brother, David. I was entrusted with examining Dick's computer, looking for pertinent information to aid us with the disposition of him and his property. We found what we needed, along with a significantly large e-mail address book. As a family we decided to notify everyone in the address list of his demise. It made more sense to do that than to have his e-mail address suddenly fall silent, no one knowing why.

I now know that what I discovered on Dick's computer was more than addresses. It was a window onto a group of real people who have shown themselves to be the very best friends one could dream to have. I have received incredibly caring and thoughtful condolences from many of you. I have observed other outpouring of shock, dismay, concern, and caring from many others on this newsgroup. I have been told being a part of amateur radio entails upholding a pledge to aide those in need or in distress. Without any doubt, you on this board have done that above and beyond all expectations (save one).

Let it be known that the next issue of the American Radio Relay League publication QST will list Dick, N0BK, as a Silent Key.
Let it also be known that the sincere words, opinions, and anecdotes appearing in this newsgroup, in my mind, constitute quite possibly the finest memorial service Dick could have received.

Thank you all.

Now I must get real.....

To Dave or Debby....(is that a transvestite thing???) I do not believe I have met a professed Christian ever in my life who is so far away from the ideals of Christianity. HOW DARE YOU USE MY BROTHER'S DEATH AS A MEANS TO GET ON YOUR EVANGELICAL HIGH-HORSE!!! Your prayers now need to be centered on avoiding actually meeting me in person, as I will certainly send you to meet your maker!

>
> Hm. If you come in on the middle of a thread, then that means that
> you read from the middle to [x] location. Not top to bottom.
> Relative top, yes. Absolute top, no.

No. "middle of the thread" means I came in about half-way through ALL
the complete posts. My (and your) servers may have dropped MANY, if not
all prior posts. If you don't quote and attribute what you're
responding to, how the heck am I (or others in my 'boat') supposed to
know what you're talking about, especially if you top post without
quotes or attributions?

> The way I see posts (IN A MICRO$OFT PRODUCT!) are in a directory-tree
> format. The replies to the original message are the branches, and
> then replies to those replies are then sub-branched. I reply in a
> newsgroup to the person I have a beef with. I don't reply to the
> original sender.

But NOBODY will see what you're responding to, if their servers have already expired the posts. YOU don't understand how Usenet works, and that's all the more reason why you should attribute, and quote (in the appropriate places like I'm doing here.) USENET is not a "bulletin board" anymore.

> I believe THAT makes my posts hard to follow.

No. What makes your, (and those of your ilk) posts hard to follow is stupidity.

> If I
> were a third party looking in, using this program, I would have no
> idea why replies were being set to the original post (that had
> nothing to do with my reply's argument.)

Then turn off your computer.

>

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

That's not even close to a good reply. You shouldn't try to be witty, because it doesn't suit you, and you lack the capacity to pull anything out of that void you call a brain that could even begin to resemble intelligence.
Please don't quit your day job sucking cock. Your less-than-inspired, witless, unimaginative posts are boring to me and everyone else here. The same could be said about my posts, but so fucking what?

Oh- and learn how to post correctly, or forver be fucked... Not that you aren't already.

The fact is, they do work hard to keep their bands clean. Some choose
to go right to the root of the problem, the most heavily and blatantly
abused part of the spectrum -- the Citizen's Band.

> And we wouldn't have to put up with their stupidity on this

I suppose you know just how everyone should spend their time, right? And why should that be any concern of yours?

But you still haven't addressed my point, and I'll simplify it for your benefit: Tim was whining about hams but I'm not a ham, I'm a CBer. I don't usually post on ham newsgroups because I'm not a ham. I post on the CB newsgroup because I'm a CBer. Was that simple enough for you to understand?

Ordinary, clueless people quote all the article, or quotes the article
below their own posting/mail because it requires less time, because they
haven't thought much of the purpose of quoting, and because their
software are optimized for such use.

Hi,

I have some 6U5 magic eye valves in stock. They are unused and in original boxes. The label is Haltron, but I am pretty sure that they are rebranded US manufacture. These can replace EM 34/35 if you just change the socket and alter the resistors a bit.
The price is NOK 186.70 each - about US$ 23.65
You an look at them and order if you like, from my web site - www.demostenes.no

Best regards,

Arnold Goksyr

DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as sockets,transformers,books,caps,resistors and other components. Web site is updated every week. You can order on-line.

Why would you want to do that? A counterpoise usually has a high voltage point at the end away from the antenna. I don't see any reason why a person would want to couple a high rf voltage to the case of their rig.

There is a further problem that, if a person does use the outside of the coax as a counterpoise - the case of the rig and probably the power wires also become part of that counterpoise. That might also include the battery and all of your electrical system.

There are electrical code requirements for grounding an antenna to the
house electrical power ground - as well as when you don't make such a
ground connection.

The procedures for a proper rf ground to the house ground is different
than for a regular power line ground.

An electrician may not be familiar with either of the above.

That is correct. When 40 channel radios became legal in 1977, a new set
of tighter regulations for type acceptance also took affect. What it
boiled down to is that 23 channels radios could no longer be sold AS NEW
after a certain date (To give the manufacturers time to clear out any
old stock).
Existing 23 channels radios could continue to be operated, and you could
sell them as used radios to other people.

And again, you're painting all CBers as outlaws when only a small handful think they need to run extra power or bother to peak & tweak. That's a hellova generalization. And you're wrong.

The correct statement is: SOME "cber's are famous for disabling audio limiters, turning up mic gain - stuff like that." Not all by any means.

How many hams run ONLY the power level you NEED to QSO? Dang few. Yet the Rules & Regs require it. Who's the "outlaw"?

>
> Prove it.

Working stations over 150 miles is illegal period. Anyone working DX, is
operating illegally, whether they are running power or not. Anyone who
transmits outside of the legal 40 channels is operating illegally. By
merely receiving these transmissions is proof enough that they are
illegal in nature. That's all the proof that anyone should need.

>
> Tune to
> > the regular 40, and while observing that signal levels are higher than
> > what would be obtained from a legal station 2 miles away, it becomes
> > obvious that these stations are running excessive (illegal) power.
>
> Prove it. Propogation will call you a liar.

You don't understand propagation very well, since you haven't considered
path loss. Unless you are proposing that atmospheric propagation not
only improves a signal's path, but amplifies it as well (LOL!), there is
no way a legal 4 watt signal travelling over 1000 miles is going to give

me the same signal as a 4 watt station, line of sight, 2 miles away.
It's never happened in the 32 years that I've been a Cber, and it
doesn't happen now.

>
> > Further analysis would show that the modulation level and the amount of

I never said they ALL were modified, only that the a great percentage of
them obviously,
have been, as evidenced by their signal (lack of) quality.

>
> > Then when the band closes down again, I can spin the dial and hear

> > using the band, even when the obviously illegal ones cannot.
>
> Which proves? Is this supposed to prove that every CBer is a criminal?
> Sorry, it doesn't. Your point?

The point here is that the percentage of "CBers" who own illegally
modified equipment or operate contrary to part 95, is a greater
percentage than hams that are guilty of the same thing, on the ham
bands.

>

Says you. My evidence speaks for itself. For you to deny it only shows
your ignorance, or you inability to accept it.

> > > The vast majority of CB users are law-abiding people.
> >
> > On what planet?
>
> Since CB only exists on this one, I think that's obvious.

Not after your original statement. In the last 10 years I don't think I
know of one CBer, who is 100% legal. The few that were at one time,
started off new in the hobby with a legal setup, but soon after caught
the "bug" and went for the amps, the expanded channels, and the other
accessories.
Most of the people that I knew in my area have either modified

"domestic" radios, or the bogus "10 meter" radios. Since I was the guy
who reparied all this equipment, I tend to think my perspective is
rather objective. After having contacts with other techs around the
country, most of whom make most of their money doing illegal "mods",
it's evident that my area in not unusual in this respect. Are you still
going to deny this?

>
> > > A small fraction

I've "listened" to CB for the better part of 32 years now. I think I'm
well enough versed in the social and political makeup of the hobby to
make an accurate assessment.

>
> > > >

> majority of CBers are "criminals", and you cannot.

It takes only 51% to make a majority. I want to know where the supposed
"legal" operators are. Propagation does not discriminate. I'm sure that
I'd hear some friendly chatter from around the country, with signals
that are not overly strong, and modulation that is not splattering, or
distorted, and not interested in long distance radio checks. But I
don't. I'm sure they're there, but the overwhelming majority of signals
that I hear are illegal in nature.

I wish I did. I'd like nothing more than to remove the skip noise and
the distorted, overmodulated, splatterboxes that clog the airwaves and
make it difficult for relaxing local QSO's to occur.

You justify an irrelevant point with another irrelevant point? You're
becoming as off-the-rails as twistedhead.

We're not talking about highways, or ten meters here. We're talking
about the percantage of "Legal" vs. "illegal" CBers and how that
compares with the percantage of legal vs. illegal hams.

For some reason you don't want to accept any evidence that would support
the position that a great percentage of CBers are running illegally, yet
we're supposed to accept, at face value, that there are a great
percentage of hams who are running illegally? Where's this evidence?

I just want you to answer me this: You are convinced that the ham "problem" is worse than the CB "problem". How do you know this? You do realize that by citing empirical cases, that you are opening yourself to the same rejection that you gave me when I presented my evidence. How do you propose to overcome this?

Hello Bill:

My amps do have a SSB Delay circuit in them and there are properly
designed.

But then again I am a Bitchen type of guy.

Jay in the Mojave

Yeah I got RF!

It's perfectly obvious how they spend their time. Why does that concern me? Because they're QRMing the newsgroup with crap. Same logic as Aanal Aaron whining about CBers QRMing ten meters, which he cannot even use.

> But you still haven't addressed my point, and I'll simplify it for

BFD. So why are all those other alleged hams posting here? Why aren't they in rec.radio.amateur.misc or some other ham newsgroup? They are accomplishing nothing by trolling here. And they will accomplish nothing as long as they choose to waste their time.

I don't believe Tim was "whining". I believe he was making a point, which you obviously cannot grasp.

> during a solid band opening

What drugs are you on? A "full s meter reading" on my radio is a +60db over S9 signal. A signal that is only obtained by a station that is within a block of my house (if legal power) or about a half mile if running high power. The highest signal I ever recorded from DX (on channel 6, which was definitely the result of high power) was about +30db over S9, which is roughly equivilent to a station a mile away, running legal power.

Now unless you want to tell me that atmospheric propagation also amplifies, as well as carries signals farther than normal line of sight, you have to take path loss into consideration. There is no way that a legal 4 watt signal is going to (due to the effects of propagation) arrive at my receiver with the same microvolts as a legal 4 watt signal, 2 miles away, in a direct line of sight. The path loss at ~1000 miles is going to be greater, DX conditions or not, than the path loss at 2 miles. So if there IS a signal from "DX-land" that is giving me a meter reading greater than what I would expect from a legally running local, I can be assured that the DX signal is running excessive power. How do you think the FCC determines that a particular station is running power, when they're receiving it from a distance? There are formulas for calculating path loss. So don't patronize me with more "CB science". It doesn't hold water, and never has, to those that truly understand RF.

How do you know they are legal? Last time I checked, most DX stations do
not make a point of advertizing their power status, unless it's to brag
about a particularly big amplifier that gives their ego a tremendous
boost.

I'd rather get the info straight from the source, so there's no confusion.
I did search the archives, but didn't find any posts where you state why
you're on your crusade to rid the world of illegal CBer's.

I find your refusal to answer my questions interesting. It shouldn't be
difficult to simply state why you are against illegal CB operations.
Perhaps maybe the others here will understand you a little better.

And what kind of radio setup do you have? I'm curious to know because I'm a
radio junkie.

But wait... aren't you also going to tell him that an amp like that needs some type of external signal (besides the RF) to key. That will require a modification to most radios to allow that to happen. My SkyWave amp allows for both a COR(carrier operated relay) or a multiplexed signal right on the RF signal for keying. If this multiplexed signal is used, the automatic SSB delay can be disabled and the relay will operate on SSB just like it does on AM or FM...

No, I mean wavelength. The length it takes for the radio wave to make one cycle.

The wavelength of a 28.000 MHZ signal is 10.71 meters. A 29.700 signal's wavelength is 10.101 meters. So roughly, the 28.000-29.700 MHZ ham band is called the 10 meter band.

The wavelength for 26.965 = 11.125 meters. 27.405 has a wavelength of 10.95 meters, so CB is called the 11 meter band.

This is exactly what I was trying to say in my post and in the article I referenced. The SWR doesn't change, but the meter indication will vary if you have the meter inserted with different lengths of Coax.

Well, on a fiberglass motorhome for instance, an antenna with a counterpoise
works better than most other possible designs.

Dave,

I'd like to thank you for taking the time to update us all re.
Richard. He was indeed a very special individual with a special talent
for imparting his knowledge/wisdom in the most UN-condescending
manner. I suspect this particular knack is responsible for his being
so well received "across the board" by the full range of
personalities. He could also give one a verbal rap on the scull when
needed, but one never doubted that it was always delivered with the
most sincere and best intentions...NEVER maliciously.

Wrt Dick's generosity, he was especially so with his time and
patience. I must have fired off a few hundred e-mails to Dick,
(...from all three of my e-mail addresses.) asking a multitude of
questions. Not a one went unanswered...except sadly, the last.
Although I can only speak for myself, I'm sure I am not alone in

saying that I am a better person for having known Richard. Both, for the knowledge he imparted and for being exposed to a different approach toward life in general. I only hope that you and your family can take some comfort in knowing that Richard is in a much better place. (...and probably laughing at us poor slobs down here, while saving a spot for us up there. Thanks Dick.) Once again, thank you and take care.

Sincerely,

Bert

>You justify an irrelevant point with another irrelevant point? You're becoming as off-the-rails as twistedhead.<<

The church is not accepting any new members at the moment, but you can look to Dogie for
lessons on grand exaltations of me.

>We're not talking about highways, or ten meters here. We're talking about the percantage of "Legal" vs. "illegal" CBers and how that compares with the percantage of legal vs. illegal hams.
For some reason you don't want to accept any evidence <<

Nah..that hasn't been said anywhere by anyone except a few malcontents. On the contrary, the angries wish us to accept what they say at face value and come unglued when we don't.....

>that would support the position <<

"Your" position is not "the" position.
"The" position would be indicative of a majority, which you certainly are not part of, as you so readily commented on in the past.

>that a great percentage of CBers are running illegally, yet we're supposed to accept, at face value, that there are a great percentage of hams who are running illegally? <<

Actually, cbers don't give a damn WHAT you accept. If we did, we'd be over in the hammie forums. Think about it.

>Where's this evidence?<<

According to the few angry hammies that puff out their chests and try to appear as a mob of intimidation to cbers, you ARE supposed to take it at face value unless one has positive proof indicating otherwise, or have you forgotten so soon?

From: nojunk_n3cvj@worldlynx.net (Dave Hall)
www.TimNebo.com wrote:
this one statement shows your ignorance with 10/11 meter propagation. a qrp station has no problem giving a full s meter reading anywhere in this nation during a solid band opening

>What drugs are you on? <<

Why do you ask this question all the time to those that ever take another position other than the one you hold on an issue? One, it indicates you hold a predisposition for illicit and illegal narcotics while you bitch about radio rules. Two, if you are not interested in narcotics, you apparently feel it insultive (nothing new there for you, is it, Hall?) and hae begun to hurl it quite regularly, almost like second-nature.

>A "full s meter reading" on my radio is a +60db over S9 signal. A signal that is only obtained by a station that is within a block of my house (if legal power) or about a half mile if running high power. The highest signal I ever recorded from DX (on channel 6, which was definitely the result of high power) was about +30db over S9, which is roughly equivilent to a station a mile away, running legal power. <<

Did you do this this cycle or last cycle? It makes a difference you know. Since the yielding scientific experiment you have done with cb radios were a generation apart in technology and a separate skip cycle was utilized for data, well, who can argue with your position on propagation when you put forth such sound authenticated data such as the above?

>Now unless you want to tell me that atmospheric propagation also amplifies, as well as carries signals farther than normal line of sight, you have to take path loss into consideration. There is no way that a legal 4 watt signal is going to (due to the effects of propagation) arrive at my receiver with the same microvolts as a legal 4 watt signal, 2 miles away, in a direct line of sight. <<

These are the crowning jewel moments of my entertainment on this board. Not only can that separate radio arrive at your receiver with the same signal, it can SQUASH it. There are many circumstances where this can happen, Hall.

>The path loss at ~1000 miles is going to be greater, DX conditions or not,<<

That is one of the most ridiculous statements you have posted to date.

> than the path loss at 2 miles. So if there IS a signal from "DX-land" that is giving me a meter reading greater than what I would expect from a legally running local, I can be assured that the DX signal is running excessive power.<<

It doesn't take anything to "asssure" you. Just hook up the radio and your meter, take a few sample readings, do it again next cycle and call them equal.

> How do you think the FCC <<

You're not the FCC. And you have no clue how they do things. It's apparent by the things you say and the next line.....

>determines that a particular station is running power, when they're receiving it from a distance? There are formulas for calculating path loss.<<

And they are null today.
They can pinpoint you with amazing accuracy from Maryland, determine the power you're running, all from a keystroke.
The formula days are way gone.

> So don't patronize me with more "CB science". <<

Can't. You don't understand it well enough.

>It doesn't hold water, and never has, to those that truly understand RF.
Dave

From: "Dennis W. Ostrowski" <dwostrowski@lucent.com>
Message-ID: <3D6CEC27.7061AB82@lucent.com>
Source record: 134569

Request For Comments:

Would it be possible for us, as a group, to do what I have described below?

When a Ham operator passes away they have a traditional term,
'silent key' that they use to describe the event in club papers and
sometimes even in national publications.

I think it's an excellent way to remember and publicize the passing of a
contributing member of the HAM community, or any other club or group.

With that concept in mind, I would like to propose a new addition
to the FAQ for this newsgroup:

A 'SILENT KEYBOARD' list which would act as a memorial to those
who have contributed significantly to this newsgroup and have
since passed on.

I would also like to propose that:

"Richard McCollum"<rmccollOMA@worldnet.att.net>

Be the first entry on that list.

Regards,

Dennis O.

PS.

There's a lot of fighting and feuding going on constantly in this
newsgroup, and yet Dick somehow managed to earn the respect
of participants on both sides of the battle. If that's not something
really special, I don't know what is.....

>

"NOBODY will see what your responding to??" What the hell are you talking about? If your news provider has that short of a retention, then I suggest you find another. I can go back and read posts that were posted over a year ago... personally, I have a filter set up that cuts them off at 6-months of age. Why bother having posts from that long ago hanging around taking up HD space? I doubt that ANY single thread has ever gone on longer than 6-months, let alone over a year. I truly recommend that you get a news provider with better retention, since that seems to be your problem from the get-go....

Your whole concept of not knowing what someone else is responding to means nothing to the rest of the world. We have modern news providers that are capable of storing posts from more than a week ago, and I suggest you find one too.

I went to the store the other day, I was only in there for about 5
minutes and when I came out there was a damn motorcycle cop
writing a parking ticket.

I went to the store the other day, I was only in there for about 5
minutes and when I came out there was a damn motorcycle cop
writing a parking ticket.

So I went up to him and said, "Come on buddy, how about giving
a guy a break?" He ignored me and continued writing the ticket,
so I called him a pencil necked nazi.

He glared at me and started writing another ticket for having bald
tires!! So I called him a pile of horse manure.

He finished the second ticket and put it on the car with the first.

Then he started writing a third ticket!! This went on for about 20
minutes, the more I abused him, the more tickets he wrote.

I didn't give a damn,--- my car was parked around the corner,
this one belongs to my neighbor who lets his dog
poop in my yard every day!

Keep trying timmyboy, but ham radio has played an important role for decades in emergency communications as well as other areas in communications. The U.S. Government recognizes the importance that ham radio has played and ham radio has gained many new frequencies over the years because of it. How many times have you seen news reports of ham radio coming to the aid with communication during a disaster? Many times. How many times have you seen a news report of cbers in the same situation? A few times...maybe. CB has done nothing and the FCC has been sorry ever since in came up with the idea of the 11 meter cb band. They, along with many others would be happy if it just disappeared. No other communications service has the sorry reputation as cb does with all the illegal operation with modded radios, splatter amps, and other nonsense that goes on on the cb band. If cb went away tomorrow no one but the idiots who somehow enjoy being illegal would miss it.
Even with the few rotten eggs we do have in ham radio, it still beats cb all over the place.

Bullshit, there are far more illegal Cbers than not, you can talk all the shit you want all you need to do is turn on your radio and listen, read the NG's, read the cb radio forum. go to a truck stop up and down any interstate. It is easier to ask who doesn't have an amp than who does.

Bill,
Taking for granted that the output of a transmitter
is 50 ohms, and the feed line is also 50 ohms, then there
is only one instance when you are correct. That case is
when the combined impedances of 'dual' antennas is 50 ohms,
meaning that the antennas input impedances are 100 ohms.
How many of those antennas do you know of on the commercial
market?
'Doc

5562. Re: Old coax length answer

BillS,
You're right, but, the 'better' option is to provide a usable counterpoise. The feed line as 'part' of an antenna is not a good idea. And by the way, a 1/2 wave antenna does not need a counterpoise.
'Doc

WTF this have to do with losing frequencies?
Ah, I'll indulge you for the whimsical moment:

>The U.S. Government recognizes the importance that ham radio has played and ham radio has gained many new frequencies over the years because of it.<<

Actually, it's because of frequency reallocation. Digital businesses are burying you.

> How many times have you seen news reports of ham radio coming to the aid with communication during a disaster? Many times.<<

Would that have anything to do with
selfegos that certain patch-wearing media and attention-seeking hammies fracture?
Why, most hammie organizations have a
contact that goes as far as contacting the media. News reported by someone that had a hand in creating it is compromised integrity.

> How many times have you seen a news report of cbers in the same situation? A few times...maybe. <<

Turn on 19. Happens daily. All over the country.

>CB has done nothing <<

Except save countless lives. Ask Keith. He knows.

>and the FCC has been sorry ever since in came up with the idea of the 11 meter cb band. They, along with many others would be happy if it just disappeared. <<

Which may explain their lack of enforcement and lipservice the like of yours.

>No other communications service has the sorry reputation as cb does <<

What ignorance. American hammies are known world-wide for the western disrespect generally shown toward foreigners by Americans. You typify the scenario wiht your intolerance toward views that differ from your own.

>with all the illegal operation with modded radios, splatter amps, and other nonsense that goes on on the cb band. If cb went away tomorrow no one but the idiots who somehow enjoy being illegal would miss it. Even with the few rotten eggs we do have in ham radio, it still beats cb all over the place. <

>Now unless you want to tell me that atmospheric propagation also
amplifies, as well as carries signals farther than normal line of sight,
you have to take path loss into consideration. There is no way that a
legal 4 watt signal is going to (due to the effects of propagation)
arrive at my receiver with the same microvolts as a legal 4 watt signal,
2 miles away, in a direct line of sight. <<

These are the crowning jewel moments of my entertainment on this board.
Not only can that separate radio arrive at your receiver with the same
signal, it can SQUASH it. There are many circumstances where this can
happen, Hall.

Twitsy, do you think that a 4 watt signal that travels 1000+ miles picks up
strength because it is DX?

>>The path loss at ~1000 miles is going to be greater, DX conditions or
not,<<

>That is one of the most ridiculous statements you have posted to date.

Twisty, he is corrrect and you don't have a clue about path loss thats why
you think he is wrong.

> than the path loss at 2 miles. So if there IS a signal from "DX-land"
that is giving me a meter reading greater than what I would expect from
a legally running local, I can be assured that the DX signal is running
excessive power.<<

>You're not the FCC. And you have no clue how they do things........

And neither do you so how can you say he is wrong? If you are clueless
yourself.?

>determines that a particular station is running power, when they're
receiving it from a distance? There are formulas for calculating path
loss.<<

And they are null today.
They can pinpoint you with amazing accuracy from Maryland, determine the
power you're running, all from a keystroke.
The formula days are way gone.

Twitsy listen to yourself stammering. So the formulas are no longer good
since they use computers now to do the calculation?
I guess all math formulas are no good since the invention of the calculator.

LOL Good One twitsy. In fact I have a slide rule made by Motorola that does all the calculation for you and determines the "microvolt signal that should be read at the reciever.
Just because you don't understand it twisty doesn't make it not so.

> So don't patronize me with more "CB science". <<

Can't. You don't understand it well enough.

>It doesn't hold water, and never has, to those that truly understand RF.

That's my point exactly why Richard Cranium aka Dick Head hasn't done this as of this date. Yet he proclaimed to not be afraid and had nothing to hide and also asked a fellow Ham to post his call sign because he didn't believe him. LOL It is kinda humorous though asking someone else to post there call then not posting there own when asked.

Sorry, but this is the only name I post with. There is a "CB myth"
that anyone who disagrees with bootlegging or illegal high power CB
operation is actually me in disguise. This is an urban legend, brought
to you by the same folks that gave you the 18-foot coax myth.

>would agree with this assessment...

I can't readily agree with your asessment since it did not make much
sense.

I know what is all this bullcrap about being unstoppable???
I use my amps everyday and talk skip as well. I am quite sure a good
many others do since I talk to them on the radio. Question for the
unstoppable one.......
WHO ARE YOU STOPPING FROM KEYING DOWN ON THE RADIO???
Answer: NO ONE AT ALL.

There is (or was) a proposed change in rulemaking before the FCC to do away with this stupid rule. Anyone know what the status of the proposed change is?

This has to be one of the stupidest rules the FCC ever came up with. How the heck do you know if someone is within the 150 mile limit or not without talking to them? For example, Many years ago when I was into CB, I got off work one night and driving home, I heard a couple of stations on Ch. 37 LSB, our local group's hangout channel. I thought the two guys were local because their signals were so good. I wasn't familiar with the two voices so I started talking to them and asked them where they were. They were in Louisiana, far over the 150 mile limit. OOPS! Broke that rule. How the heck is one supposed to know what distance another station is located? The conditions must have been good that night, but those were the only two stations I heard on the channel.

Anyway, this stupid rule needs to be abolished.

"Now unless you want to tell me that atmospheric propagation also
amplifies, as well as carries signals farther than normal line of sight,
you have to take path loss into consideration. There is no way that a
legal 4 watt signal is going to (due to the effects of propagation)
arrive at my receiver with the same microvolts as a legal 4 watt signal,
2 miles away, in a direct line of sight. <<
-
These are the crowning jewel moments of my entertainment on this board.
Not only can that separate radio arrive at your receiver with the same
signal, it can SQUASH it. There are many circumstances where this can
happen, Hall.
-
>Twitsy, do you think that a 4 watt signal that travels 1000+ miles
picks up strength because it is DX?
<

Man, whoever taught you that a DX signal picks up strength was wrong.

>The path loss at ~1000 miles is going to be greater, DX conditions or
not,<<

That is one of the most ridiculous statements you have posted to date.

>Twisty, he is corrrect and you don't have a clue about path loss thats
why you think he is wrong.<<

Let's see if I'm wrong.....if it's 1000 miles, it's DX.
He said "DX conditions or not."

>than the path loss at 2 miles. So if there IS a signal from "DX-land"
that is giving me a meter reading greater than what I would expect from
a legally running local, I can be assured that the DX signal is running
excessive power.<<

You're not the FCC. And you have no clue how they do things.....

>And neither do you so how can you say he is wrong?<<

If you really want to learn, start asking pertinent questions instead of
personal ones that you can't get over..

> If you are clueless yourself.? <<

Your world has always been based on "what if's".

>determines that a particular station is running power, when they're receiving it from a distance? There are formulas for calculating path loss.<<

And they are null today.
They can pinpoint you with amazing accuracy from Maryland, determine the power you're running, all from a keystroke.
The formula days are way gone.

>Twitsy listen to yourself stammering. So the formulas are no longer good since they use computers now to do the calculation? <<

Didn't say they were no good.
YOU did and entered it in the equation. The effectiveness of said formulas and calculatons are nort being questioned by anyone excepet yourself.

>I guess all math formulas are no good since the invention of the calculator.<<

No surprise to me. It's as accurate as the rest of your posts.

> LOL Good One twitsy. <<

Glad you're having fun and enjoying myself..
Self-entertainment can be a difficult achievement for the challenged.

>In fact I have a slide rule made by Motorola that does all the calculation for you and determines the "microvolt signal that should be read at the reciever.
Just because you don't understand it twisty doesn't make it not so.<<

1000 miles equals DX no matter how you slice it on cb.
A 4 watt legal radio in skipland can squash the hell out of another 4 watt radio across town from you, and a beam is only one of many factors that may take advantage of mother nature to accomplish what you have shared with the rest of the world you lack: Knowledge concerning cb propagation. No need to get hostile and hurl insults over it. You're getting as bad as Hall.

>So don't patronize me with more "CB science". <<

Can't. You don't understand it well enough.

>It doesn't hold water, and never has, to those that truly understand RF.
Dave
"Sandbagger"<<

Or how your experiments prove the official sunspot observatory records in Belgium incorrect.

Pure BS. Who does the weather service rely on for storm spotter
reports in severe weather? They don't call the untrained cbers.
They call the RACES folks who undergo yearly storm spotter
training provided by the National Weather Service. I don't know of
any ham club that has someone who calls the media. Keep guessing,
maybe you will hit one right someday.

>
> > How many times have you seen a news report of cbers in the same
> situation? A few times...maybe. <<
>

> Turn on 19. Happens daily. All over the country.

Yea, lots of flat tire reports, fender benders, road rage...real emergencies. When reliable communications on many different frequencies are need in a real emergency where normal communications are down, it is the hams who step up and can be counted on. The officials don't want a bunch of idiot cb wanna play radio types around in the way. They want someone who knows how to communicate.

>
> >CB has done nothing <<

It is because the cbers in their disregard for any rules made a sewer pit of communications out of the cb band and the FCC simply gave up.

Get the Cobra 29, and make sure you DO NOT have one of the truckstop
butchers "supertune" it. Get a good powermic for it, though, because
the stock mics sound like poop on those things.

Don't bother with the RCI if you are just going to listen on 19.
Besides, it's not a CB.

I second Arthur's opinion on the 2950, i am on my 2nd one since Bronco's tech killed the 1st one by flipping it over and letting it slam on the counter.
The 2950 does'nt appeal to idiots like the Galaxy does (good) but for the money (about $300) you will never have a need to upgrade once you learn how to use the 2950 to it's full potential.
If your pockets are alittle deeper check out RF Limited's Magnum 357DX, it pumps out 100 watts on AM and 150 on SSB but so does the Ranger 2970.
These are my favorites but as the man said you can't go wrong with a 29LTD or 148GTL.
Don't waste your money on the SoundTracker cause it's a pile of s__t.
Nuff said 4 now

What ignorance. Do you think the rest of the world does not hear the American cbers with all their swang, high powered overdriven splater box "lenars", foul mouths, and "aaaaauuuuuuddddddiiiiiooooo, big tin four got yer ears on thar gud buddy" and other cb crap? American cbers are know world wide for their sewer mouths and overdriven splatter boxes making much of the 11 meter band useless for reasonable communications.

#1 buy it from a real cb shop
2 they can be opened a little, and sound real clear, which most truck drivers don't want,
#3 if it isn't all muffled up and not able to understand they don't want it
4 hell yes they are better than cobra junk!!!!!!!!
#5 in most cases they cost less than a148.....

have a nice day

Griffag,
Thats cuz it is not the issue. The issue is you are a federal criminal. All you do is disengenuously post stuff blaming others for the problems. We did not build that amp you are selling. That being true, YOU are the criminal here. If the AKC badgering is so illegal, why dont you keyqueens prosecute us?
ANSWER: You cannot do one single thing except slimily try to refocus the blame.
That is exactly why you keyqueens whine so much, you cannot stand to have it out here in the open that you are federal criminals. Never once have you denied that. The ONLY thing you do is say "well, this one does this and that one does that, so why can't I do the other?" That aint the way it works. As I am accountable for anything illegal I do, so you are. NEVER do you keyqueens admit that. Is is all about dissembling, refocusing, spin, and lies, as far as the entire keyqueen perspective goes. Look at twathed, I mean twithed...thats all he EVER does. That fella is the queen of blame others and focus on others. You are running a close second lately.

Oh well...gives us more grist for the Anti-boys gristmill....hehehehe

Ahh, more people weighing in trying to blame the anti-boys. The simple fact is you are all federal criminals. That is the sum and total of real issues here. the rest is a smokescreen keyqueens put out to attempt to hid that truth.

But surely if your reasoning behind why hams is good is because it helps communicate during an emergency, then surely the illegal operators (with larger outputs and further distances), or having in free to anyone to use, therefore giving a bigger net of people to help, wouldnt that make more sense?

You know, you lose alot of credibility and harm your cause when you post a url THAT disgusting. I mean really...was that really necessary?

For every post you make speaking out against keyclowns, a decent human being could dismiss it because your posts are so horribly pornographic.

If you want people to see things your way, maybe they would be better served by listening to your ideas instead of childish insults.

Imagine that you're a newcomer to the group reading these messages. They may be so horrified by what you've posted that they decide "keyclowns" aren't as wacky and may subsequently side with them. Remember, alot of people read posts in this newsgroup without actually posting anything. You're speaking to them as well. At this point, you look like the one who is out of line.

Food for thought (for what it's worth)

Alan S.

well you see, in australia the whole emergency services have moved to digital on different channels to us, and I know quite a few police and none of them have ever had a transmission blocked because of someone stuffing around, I also was on the CFS (our country fire department), and we didnt even use digital, and we never had a problem, maybe the US should get ahead a bit, and move their "important" services to a better system.

-
>Twitsy, do you think that a 4 watt signal that travels 1000+ miles
>picks up strength because it is DX?

Man, whoever taught you that a DX signal picks up strength was wrong.
****
Sorry Twitsy I nor anyone who elmered me has ever thought that except you
Remember just because you say it doesn't make it so.

>The path loss at ~1000 miles is going to be greater, DX conditions or
not,<<

That is one of the most ridiculous statements you have posted to date.

>Twisty, he is corrrect and you don't have a clue about path loss thats
why you think he is wrong.<<

Let's see if I'm wrong.....if it's 1000 miles, it's DX.
He said "DX conditions or not."

Ok here again Twisty trys to change the subject and say how far DX is who
cares his point was 1000 miles or better there is Path loss regardless if
you want to call it DX or not 1000 miles might not be DX to those on HF, but
to a Cber such as yourself it is. That has nothing to do with the fact that
a signal at 1000 miles away in no way shape or form can overpower the same
wattage signal 2 miles away all radio equipment(antenna, coax loss/length)
being equal

>>If you really want to learn, start asking pertinent questions instead of
>>personal ones that you can't get over..
****

Ill ask again how do you know the FCC's procedure any better than anyone
else on this NG. Besides your opinion of course.

> If you are clueless yourself.? <<

Your world has always been based on "what if's".
****
And your is based on lies and distortions of the truth, and of course just
your opinion and never any technical evidance to back up your wild claims.

>determines that a particular station is running power, when they're
receiving it from a distance? There are formulas for calculating path
loss.<<

And they are null today.
They can pinpoint you with amazing accuracy from Maryland, determine the power you're running, all from a keystroke.
The formula days are way gone.

>Twitsy listen to yourself stammering. So the formulas are no longer good since they use computers now to do the calculation? <<

Didn't say they were no good.
YOU did and entered it in the equation. The effectiveness of said formulas and calculatons are nort being questioned by anyone excepet yourself.
****
Ok what does the word :Null and gone" mean in your vocabulary? I am not questioning the formulas it was you who said
they are gone and null not me again you Twistyed the post not me I know the formulas still work how do you think a computer figures it out ? Uhhh duhh it has the formula plugged in already ...

Glad you're having fun and enjoying myself..
Self-entertainment can be a difficult achievement for the challenged.
****
Oh I am sure you have first hand knowledge of being challenged you are living proof.

>In fact I have a slide rule made by Motorola that does all the calculation for you and determines the "microvolt signal that should be read at the reciever.
Just because you don't understand it twisty doesn't make it not so.<<

1000 miles equals DX no matter how you slice it on cb.
A 4 watt legal radio in skipland can squash the hell out of another 4 watt radio across town from you, and a beam is only one of many factors that may take advantage of mother nature to accomplish what you have shared with the rest of the world you lack: Knowledge concerning cb propagation. No need to get hostile and hurl insults over it. You're getting as bad as Hall.
****

Ok Twisty lets get a few things straight, where did I hurl insults at you in the previous post? Please clarify so I don't label you a liar again. Ok please tell us with all your technical jargon how a 4 watt skip signal 1000 miles away can produce a greater field strength than a 4 watt local station and squash it as you say LOL Cb propogation is no different than any amatuer band. Now If I run a 4 watt radio into a dummy load I am sure a 4 watt skip station will squash me, But AS USUAL TWISTY WANTS TO TWIST THE POST TO NOW SAY BEAM ANTENNA ETC. TWISTY ANY CB ROKIE SUCH AS YOURSELF SHOULD KNOW THAT A BEAM WILL PRODUCE A HIGHER FIELD STRENGTH THAN A DIPOLE OR EQUIVALENT ANTENNA NOW YOU WANT TO TRY AND QUANTIFY YOUR POST AND SAY A BEAM ANTENNA NO TWISTYS WE ARE TALKING SAME EQUIPMENT FOR BOTH STATIONS.

So I will ask you this Twisty do you know how to calculate what the path loss is for a station 1000 miles away running a 4 watt station on 27

megacycles, you pick the antenna they are using. because the 4 watt local station that you said your dx station will squash he is also running a 8 element beam so now how will your dx station with the beam squash anything?

Can't. You don't understand it well enough.
****
Twisty I forgot more than you know about Cb and radios in general

Not everybody reads in the same way. I download the posts, read them
and delete. So when I next download I don't have the original post
that you responded to. I don't care who you're replying to as long as
you quote a bit and say who wrote it then I can follow it.

> sense?

Having larger outputs does not always mean further distances. If
the propagation on 11 meters is dead the all the power in the
world won't get you signal out except for local communications.
When propagation is dead on 10, 15 or 20 meters hams can move to
other bands and still maintain reliable communications over
distances. The ham VHF/UHF bands with repeaters are much superior
for local communications that 11 meters.
Authorities do not want more people to help, they want trained
operators who know how to communicate and can operate on traffic
nets to pass traffic (there is a certain protocol for this it
isn't just "hey I just got a message from gud buddy so-and-so, who
said blah blah blah, pass it on"), not just a bunch of wannabe
radio heroes cluttering up the frequencies and getting in the way.

You are believing in the old cb myth that more power and louder is
better.

You seem to imply that all ham just buy a ham license. Well, it doesn't work that way, sure there have been some cheating in the testing process, but that is such a very small minority. 99.99% of hams take the test legitimately and "earn" the privilege to operate on the ham bands. The cber earns nothing, it has been given to him and you see the results, chaos of 11 meters. A person tends to respect something he has to put forth a little effort to gain.

I've got a DX959. It cost me $160, after I talked the guy down from $180. I've done a warranty replacement on it. It happens. I still have a beef with the knobs having what I consider to be an unacceptable amount of "wiggle" and free-play in them. Every 959 I've ever seen has this problem (if you can call it a problem). Cheaper potentiometers, I suppose. Take this for what it's worth. My 959 has lots of neat knobs and switches that are alot of fun to play with, but do nothing to improve my ability to communicate. I just think it looks cool in the dash =) The larger meter is pretty darn cool.

Yes, they can be easily modified to run more than 4 watts. Lots of radios are easy to modify to increase carrier power. This is pointless (and illegal), however. Doubling the AM carrier from 4 to 8 watts only increases the signal strength at the receiving radio by half an s-unit. You would have to double it again (16 watts) to get another half an s-unit increase, and so on. It's silly. A 949 won't last long at 16 watts, so it's pointless. None of this does a damn thing for the receiver, either.

Case in point - my brother in law and I can talk to each other on sideband from our vehicles parked in our driveways reliably and regarless of conditions. It's 6 miles though neighborhoods, tall buildings and trees as the crow flies. We're completely barefoot. My father with his 160 watt linear cannot do the same. Ain't that somethin'? A good antenna mounted and grounded properly goes a very long way.

I'm not preaching, so do me a favor and don't take anything I've said the wrong way. It's just something to think about. You're probably going to want to run more power regardless of what anybody tells you. I can't help that. But at least you have an alternate view to consider, eh?

I hear alot of great things about Uniden radios. Give them a looksie.

Alan S.

skuld-chan,
What would you do with the recording? It really
isn't usable for anything, doesn't tell who it is,
isn't concidered proof in a court. This is an honest
question. What would it be good for?
'Doc

The question posed to Griffey is surely legit, he is advertising a 10 meter amp as a ham amp where is his certification for this amp where is the type acceptance? btw, I use 10 meters when ever I feel like it wanna know why because I have a license something you only dream about.

Maybe that they got cornered in the "ebutt" threat and were exposed
for false statements?

Ya know, they really should be active on those precious hambo bands
instead of wasting so much time here in a CB newsgroup. If they were,
they might actually run some of those over-powered truckers out of ten
meters. Shows where their priorities lie, hey?

BTW, I've been listening to the low end of 10 meters the last few days
and I haven't heard anything remotely sounding like an out-of-band
CBer. In fact, I haven't heard anything at all. Which is odd since
there's still activity on 11 meters! But they're too busy TROLLing
rec.radio.CB! Losers!!

I don't know about where you live, but if you don't 'stay up'
with
traffic here, they'll run over you. That means in most cases,
you
have to speed in self defence. That's not a justification, but
it's
the way it is.

But that is just
> fine with me cause there is going to be a day when all these frequencies are
> going to be open to the public anyways.

Everyone is entitled to their own opinion, but I don't think
either
of us will live to see that happen.

Just look at the cb, the FCC
> couldn't stop people from using the AM legally with a license so they drop
> the license. So what are they (Ham Operators) going to cry about when
> everyone will be allowed to use these so called licenses only frequencies to
> cause hate and discontent like is done on channel 19? Just think about that
> one for awhile.. It is only a matter of time!!!!!!!!

You might be right, but it's longer away than I'll ever have
to worry
about.

> As it is now you folks are loosing frequencies cause no one is using them.
> Hell all of the old timers are dying off and none of the new generation care
> about radios. The new generation uses computers to communicate, just the
> same way you people are doing right now in this newsgroup! Just think about
> that for another minute or two!

I also use a computer in conjunction with a radio. Do you
mean that
people can have only one hobby? Is it computers ~or~ radios?
Not both?
I really don't think communicating with a computer is anything
like talking

on the radio. Or maybe you could compare it with CB radio,
don't need
a license for either one, just money to buy one. Then again,
it's kinda
hard to hurt yourself with a computer, unless you drop it on
your foot or
something. Can't really say that about the high voltages
you're liable to
encounter with a lot of amateur radio gear. That's one reason
for that
test, you know. Trying to make sure you know enough NOT to
kill your self.

> So why don't all of you old time so called ham operators go back to your
> radios and carry on a conversation with other folks just like
> yourselves!!!!!!!!!!
> Just look at the name of the newsgroup, I don't think the word ham is in it
> anywhere. Oh but I know your way of thinking (hams) and you are going to
> tell me the word radio means "hams" right? Well before you do that radio
> also means stereo all so. But I don't see anyone posting questions about
> there stereos in here, do you?

Actually, I was going to ask why a person can't be both a
CB'er and
a ham? Just because you're one doesn't mean you can't be
both. I'd
have to guess that the majority of hams were at one time (if
not still)
CB'ers. I don't know where the idea that you couldn't have
both the
CB and amateur radio as hobbies ever came from.
And as far as the 'what's it gonna hurt to operate illegally'
thing is
concerned, it's the old story about 'getting something for
nothing'. It
hurts everyone when the rules (laws) are broken. That may be a
bit hard
to follow, but it's true.

Terry
I have found in all the Microsoft operating systems that Windows 98
SE is about the best. I have a box on my network that runs Linux. It

is about the most user unfriendly Operating system. I use it in a Dell dimension 333. It serves as a router and a firewall for my network. I have 10 computers running on my network. I have 3 boxes on my network that run Windows NT 4.0 with all of the supplaments. They stop producing supplaments when 2000 came out. Alot of people swaer by 2000. I like Windows 98 SE myself. Anyway the NT boxes are DNS box homebrew 233 MHZ box, a print server another 500 MHZ box and a expermental 400 mhz box I am trying to get to work as a router (no luck yet). I also want to get rid of linux. Some day I hope to have DSL in here so I'll need a windows router instead of Linux. Nobody in the DSL world supports Linux.
I have a 733 and three 400's that all run Windows 98 SE.
Just in case you where interested.

The 10 meter band is an amateur radio (ham) band. You must hold an
amateur radio operator's license to operate on that band. Yes the
truckers are using them illegally in the 10 meter band and being
caught.

As the other guy said, old cobras are good. (but you have to be
careful, of where they were made / manufactured by)

Uniden makes decent rigs.

Also, Texas Ranger makes a good product.

I always liked the Uniden Grant XL. I personally own four of them. One of these days, Uniden probably isn't going to be making any more of these fine radios and I just want to have some extras.

As to performance, it is excellent. The receive is good because of good adjacent channel rejection (much better than most of the exports and 10 meter rigs). Power output is standard, but the sideband is a plus.

A few years ago, I "dedicated" a Grant to a special single channel only (channel 24). By "dedicated", I mean I greatly narrowed the bandwidth of the receiver/ transmitter so that only channels 20-28 would be received (greatly increased the Q of the coils and filters). The results were dramatic and even someone running 100 watts just a few feet away on channel 29 wouldn't interfere with 24. It took a lot of work as most of the existing coils had to be replaced, but it was well worth it, especially for a single dedicated purpose like I had. The only drawback was that the transmitting SWR's would increase to 3:1 just one channel above or below ch. 24. Now that's what I call selective!

Good luck with your radio, whatever you choose.

Just my two cents....

My preference for a straight out SSB CB radio would be the Uniden Grant XL/LT. If you would also be considering used radios, then you could go with an older Cobra 148. My general rule of thumb is, if the Mike cord comes out the side of the unit, she's a keeper, and if it's hanging from the front (faceplate), she's a tosser (doorstop)...

I don't have any experience with the Galaxy line of CBs, so I can't really comment on them. I'll leave that up to others to do.

PH

Dude, why waste my money? I can get a brand new Moonraker 4 (Retail
mind you, i can get it less wholesale :P) for $169 so why would i pay
$240 for the same thing?

I'll give you the fact that winblowz sucks, but linux rocks, it is much more stable, much LESS expensive, much less prone to being taken out by virii.

You just need to learn how to use it.

>It's perfectly obvious how they spend their time. Why does that

>concern me? Because they're QRMing the newsgroup with crap. Same logic
>as Aanal Aaron whining about CBers QRMing ten meters, which he cannot
>even use.

1. The "QRM" can be cleaned up by using a killfile, exercising some
self-control, or just 'changing the channel' or 'turning the damn
thing off'.

2. This newsgroup has been filled with "crap" since it first began.
Unfortunately, that's the nature of Usenet. As long as there are
people that can't control their urge to verbally defacate in public
places, you will just have to dodge the "crap" whenever you want to
take a walk.

3. Your example of "logic" is seriously flawed, since you don't know
who Aaron is, and you don't know if he can use HF or not. In fact, you
don't even know if he is a ham.

4. ANYONE has just as much right to voice his opinions in this forum
as you or I do (provided it isn't illegal, such as libel, threats,
advertising CB amps for sale, etc...).

5. If any of those facts are not to your liking to the point of
causing you grief, then you really need to get a life.

>> But you still haven't addressed my point, and I'll simplify it for
>> your benefit: Tim was whining about hams but I'm not a ham, I'm a
>> CBer. I don't usually post on ham newsgroups because I'm not a ham. I
>> post on the CB newsgroup because I'm a CBer. Was that simple enough
>> for you to understand?
>
>BFD.

I think it -is- a "BFD" since that was my point in the first place.

> So why are all those other alleged hams posting here? Why aren't
>they in rec.radio.amateur.misc or some other ham newsgroup?

Because they are able to post, because there is nothing preventing
them from posting, and because they have chosen to do so. For any
other reasons you will have to ask them.

> They are
>accomplishing nothing by trolling here. And they will accomplish
>nothing as long as they choose to waste their time.

Evidently they are accomplishing -something-, as you seem to be
offended by their posting. But you (and Timmy) seem to be similarly
offended by MY posting. And you have never voiced your disagreement
with the "QRM" from proponents of illegal operation. So clearly your
problem isn't with hams, but with something else. I recommend a
therapist to get to the root of your problem. Twisty claims to have a
good one, but he can't seem to recall a name. Maybe he will provide it
to you through email.

>I don't believe Tim was "whining". I believe he was making a point,
>which you obviously cannot grasp.

What -YOU- couldn't grasp was the point that -I- made in response to
Timmy's whining. And yes, Timmy was whining -- he whines constantly.
Maybe someday he will make a positive and constructive contribution to
this newsgroup, but I'm not holding my breath.

The Big Kahuna will be missed by all, he was a wealth of knowledge and
was always willing to share it. It was his way of doing so that endeared
him to us, he stuck to his guns but did it with a mixture of humor,
strength, and wisdom.

God Bless, the members of the Fulton County Amateur Radio Club join with
me in offering condolences.

If I wanted to legally operate one of those 10 meter radios you can by at the TA or a Pilot , lets say a Galaxy, what FCC license would I need?

Do you have to know code?

I know this isn't really a CB question but I do know there are quite a few hams on here.

Thanks

You need the Amateur Technician + 5 WPM CW test element to operate on 10
meters. The easiest way to do this is to drop by Radio Shack and purchase
the technician level books by Gordon West. There are other sources on the
internet for Amateur testing/licenses as well. Take
the entry level test (Technician), then obtain the Morse Code tapes, again
from Radio Shack, a
ham swapmeet (advertised on various Amatuer sites--QRZ, QSL, Eham---). Test
sessions are
held all over the place, you just need to contact a local club, or member,
to find out when and where. Good Luck!

For someone that whines way too much about how other people spend
their time, you sure spend quite a bit of time with your anti-ham
crusade, both on and off the newsgroup. Care to elaborate? Or would
you rather just repeat the same old BS about how the hams are ruining
RRCB? You know, there have been quite a few hams that have been
outstanding contributors to this newsgroup. You know what? Dick was by
far the most experienced, the most informative, and the most respected
regular in this group, and he was a HAM. On the other hand, YOU
haven't contributed squat. So why is it that YOU are complaining?

August 28, 2002

CERTIFIED MAIL-RETURN RECEIPT REQUESTED

Cheetah Transportation Company
378 Williamson Road
Mooresville, NC 28117-5935

SUBJECT: WARNING NOTICE-UNLICENSED RADIO OPERATION
Vehicle License Number LK-6870 (North Carolina)

Dear Sir:

Monitoring information before the Commission indicates that a driver of the above vehicle licensed to your company was operating unlicensed radio transmitting equipment on 28.086 MHz, on Interstate 77 in South Carolina, on June 5, 2002.

Please be advised that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301. Such operation will subject the individual to fine or imprisonment, as well as an in rem seizure of radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Fines normally range from $7,500 to $10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth
Special Counsel
Enforcement Bureau

CC: FCC Southeastern Regional Director

Sorry to disappoint you but I was licensed long before no-code was
ever thought of and I hold an Advanced Class license. I was
probably operating when your mama was cleaning out your poppie
diapers.

>

Then you need to get a receiver that works, try 28.085, that is a
regular trucker's frequency. I can listen on 10 any day and hear
truckers and other illegal stateside operators on 10 meters.
As far as the rest of your juvenile rant...PLONK!

Well usually the first question that I always hear asked is where is your 10-20, location, hood, Casa, So of course when you didn't know where he is from your not breaking the law your actions are not intentional, but after he tells you he is in Louisiana and you continue to talk to him that's breaking the intent of the law.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

I shall be leaving now and moving on to the scanner ng's. Maybe I'll see some of the nice people in this ng there as well.

After much research, I just don't think CB is right for me. I wish there were a perfect radio transceiver where you could have emergency communication with the authorities (along the lines of Ch. 9), and at the same time have a channel free of illegal radio traffic without having to pay too much to do so.

OK, top-posting complainers, you can now cheer very loudly.

Se la vi.

Welcome to the ever changing screen nic of George
Busch WA3MOJ. He change's nic's more than you do
underwear. That is why he changed his screen nic, because
you said you were going to add him to your kill file.
In the future, just ad him, then you will notice that
a week or two after that, when you stopped responding,
he will change his nic again.
Now watch the rude, harassing, sexual filled response
he will leave.

Landshark.

Right. If you have the keying circuit from the radio to the amp, you don't have to worry about the delay because the radio holds that relay shut until you let go of the mic. Geez what a concept. What I don't understand is why there is a rule about amps not being RF activated. It's just as easy if not easier to build the circuit into a radio than it is to put a keyin circuit in an amp. More money for the radio shop selling the amps behind the navy blue curtain. :)

So, use a proper counterpoise. Don't try to use your transmission line in
a function for which it is not well suited.

That single instance shows that it is not "impossible", which is what was originally claimed. Whether there are commercial antennas out there that fit the requirements is immaterial.

I don't know why a person would want to do so, but it is also possible to hook up two antennas in series. This provides another instance.

Then there is the option where the transmitter output is 50 ohms but the coax being used is 70-75 ohm.

Why do you need a delay circuit? With a proper amp, the simple pressing of the mike button also keys the amplifier. It stays keyed until you stop pressing the mike button.

Of course, that requires that the transmitter has an external keying circuit, which I have never seen on any CB radio.

Sure, it needs a simple DC operated keying circuit - as does the transmitter.
No need for COR or multiplexing.

Such modifications are trivial.

The problem with rf activated amps is that you are momentarily feeding power
from the transmitter into an open circuit. That cannot be good for the
transmitter and may or may not harm the amp in the long run.

Another problem with COR circuits is that they sometimes latch up if the
SWR gets a bit high. So the transmitter keys, but will not unkey. This is
a potential problem on AM and FM , but not SSB.

Never got it here.

If it was from ahk@chinet.com or ahk@chinet.chinet.com , then I already have the a$$h0le blocked. Sounds like his trick with the script that puts a message on your screen saying that "Windows has detected the alt.config virus". Every time you click the "ok" button, it re-appears. The only way out is the "three fingered death grip"... with the risk of data loss on the hard drive.

Switch off scripts for newsgroup messages in Outlook Express.

Regards,

Peter.

Surely 4.9 volts is rather low to begin with, I would expect higher
than that. What are you getting on SSB TX (no audio).

If your power is dropping after a short time, it could be the output or
driver getting hot...
1. Make sure they are both bolted down well.
2. Check the bias on each stage.

Regards,

Peter.

It is true, a few hams have violated the law and sold licenses or passed
people who shouldn't have passed. But they are rare and are usually quickly
found out. They usually lose their licenses, and the persons who were
tested by those examiners are all called in for retesting. If they refuse
or fail the test, then they also lose their licenses.

Not bloody likely. If the S meters were calibrated to the original 6 dB/unit, then Alan's claim would be correct. But most meters seem to be much more generous - closer to 3 dB/unit. If that is the case, then that increase would produce 2 S units.

I prefer to ignore S unit measurements, as they are imprecise at best.

Going from 4 watts to 16 watts is a 6 dB increase. Going from 4 watts to 40 watts is a 10 dB increase. Going from 4 watts to 1024 watts is a 24 dB increase.

Hello All,

My CB repeater is running on a SINGLE Philips FM828 which has been modified to FULL DUPLEX using the existing boards, just wired up diferently.

I have just hooked a 30-second sound recorder kit from Jaycar as the voice ident BUT it has lowered the audio, the repeat audio was once better than all the repeaters in Newcastle, now it's the quietest.

Can anyone tell me how I can turn up the audio??

PLEASE HELP!!!

Roderick

5714. Linux is like a breath of fresh air to me.

Newsgroup: rec.radio.cb
Date: 2002-08-29 10:47:25 UTC

Linux is like that elusive piece of fat free beef unlike Microsoft
Windows XP which is nothing but poor quality chuck.
I have left the Microsoft BBQ and have moved over to Linux because
Linux is now my life.
I feel welcome in the Linux klan and hope to spend much of my time
compiling colonels and making sauce better.

I spent the last 4 days downloading and emerging Gentoo and it is just
so fine that words can't describe it.

It's beautiful to me like a piece of prime rib hanging there on a
meathook.

My ex-wife used to like to call me a loser but now that I have Linux,
I don't need women anymore. Just me, my meat and Linux.

So who's the loser now?

I'm working at getting the entire meat packing plant switched over to
Linux because the Windows system keeps freezing up on us.

I would like to start a Linux club for the many meat packers who might
be interested in trying out Linux.

But for now, my entire life revolves around Linux and the time I spend
tinkering with it.

I've already corrected you several times (as have others), i.e.:

1. All "10-meter radios are illegal". No they're not. It is illegal to
"import and market" new ones.

2. "Hams cannot use `illegal' 10-meter radios". Yes they can since
there is no type-acceptance requirement for amateur use.

3. "There is no interference or jamming on 14.313". Wanna bet? Do you
even have a receiver?

4. "No corrections, hence no inaccuracies". Nuff sed. HAR de HAR HAR!

The list could go on, but I don't wanna waste too much bandwidth. Keep
changing your tune, Aanal Aaron. You really think nobody notices?
Wrong again!

Poor quote. What would you know about being "right"? You haven't ever
said anything to be right or wrong about. You just follow Aanal Aaron
aaround and inject your juvenile snipes. Maybe that's why you never
get on the ham bands? Nice try, Georgie-girl.

That "stupid" rule was put there because CB was never intended to be
anything but a short distance communication service. The prohibitation
on "DX" talking was also due to an ITU requirement that long distance HF
communicators be versed in Morse Code. By declaring the class D citizens
band as a short range service, this code requirement could be waived.

In upcoming years the requirement for Morse Code knowlege could be
dropped completely from ITU regs. If that happens, then the door is open
to remove the 150 mile limit for CB range. But don't hold your breath
yet.......

The proper thing to do would be to promptly end communication once you
determined that the other station was beyond the range limit. The rule
would not be viewed as broken had you done that. The FCC recognizes that
it is difficult to determine whether another station is local or DX, so
they don't expect you to be a mind reader.

I suggest you read up on propagation, signal path loss, S meter calibration, receiver sensitivity, and other related topics. You are obviously missing something for you to subscribe to the theory that QRP power can give a "full scale" (Whatever that really means) signal anywhere in the world.

Think about this for a moment. If a QRP signal (Generally less than 10 watts) was sufficient to propagate a "full scale" signal anywhere the signal went, then why do shortwave broadcast stations run 50 KW? Why do hams bother to run 1.5 KW?

I've done plenty of QRP operating on 11 meters for many years. During cycle 22, while the great majority of people where climbing on top of each other on the regular 40, running gobs of power and doing nothing more than raising the noise floor, I was on some obscure frequency, working Europe and Africa with 12 watts on SSB. But they were nowhere near "full scale". Most were in the S4 to S7 region. Had they been on the legal 40, they would've been covered up by the hetrodyning. Even "stateside" stations running similar "Stock" power were only in the S9 range at their peak. That's a far cry from the guy 2 miles away that gives me +20 over.

I suggest that your "S" meter is very loose and in need of calibration. The usual standard is 50 uV for an "S9" reading.

As for my "attitude", I've always had a problem with people who try to promote false theories, "CB science", and other smoke and mirrors tricks to unsuspecting (Gullible) people for economic or other gains. In my 32 years as a CB operator, and repair tech, I've heard just about every "trick" and myth that has been proliferated. I make every effort to debunk these claims, as I don't like to see newcomers and other people who don't understand radio, being duped by charlatans, posing as "experts", some of whom are commercial companies (Remember when the A99 was actually advertized as having "9.9 db gain"?).

Stay away from the 10 meter radios unless you're really familiar with CB.
10 meters is an amateur radio band, and unless you're licensed to operate
there you shouldn't be there.

I'd stick with a stock 40 channel radio purchased from a major retailer.

Oh sure; I also listen to 14.313 and 3950 at times. Have you bothered?
I've been monitoring the low end of 10 meters lately and haven't heard
anything that sounds like an out-of-band CBer or trucker yet. In fact,
I've heard no hams there, either; they must think the band is closed,
which is strange because I'm hearing activity on CB.

And your original comment IS an assumption, "the most heavily and
blatantly abused part of the spectrum -- the Citizen's Band". Prove
it.

How about the most USED part? The fact is that there are 30 to 40
million CBers crammed into less than ONE megahertz, compared to less
than ONE million hams spread out all over the spectrum. I'm willing to
wager that the proportion of "illegal" operations is roughly the same
in both groups; the NUMBERS will of course be higher on CB, simply
because there are so many more people trying to use the band, but
proportionatly it'd be about the same. The hams have nothing to smile
about, do they?

Why don't the alleged amateurs do that instead of clogging a CB
newsgroup with mis-information (Aaron), innuendos (Georgie-girl), and
just plain bovine excrement (Doggie)? They really should take your
advice, shouldn't they?

> 2. This newsgroup has been filled with "crap" since it first began.
> Unfortunately, that's the nature of Usenet. As long as there are
> people that can't control their urge to verbally defacate in public
> places, you will just have to dodge the "crap" whenever you want to
> take a walk.

Nonsense. There were, and occasionally continue to be, some good
discussions here, same as in any other newsgroup. It's those alleged
amateurs that make rec.radio.CB a cesspool. Nice description of Doggie
and Georgie-girl there, however!

> 3. Your example of "logic" is seriously flawed, since you don't know
> who Aaron is, and you don't know if he can use HF or not. In fact, you
> don't even know if he is a ham.

Word from people better in the know than myself is that he's a
no-code. That means, at best, he cannot use HF at all. Ergo, he has no

reason to whine about "intruders" on ten meters, does he? If he holds NO license, he has even less reason to whine. And there's no evidence, as Tom Sevart stated, that he has ever operated a radio at all. Again, there's this thing YOU brought up about "integrity".

> 4. ANYONE has just as much right to voice his opinions in this forum
> as you or I do (provided it isn't illegal, such as libel, threats,
> advertising CB amps for sale, etc...).

That's true; but who appointed you (or anyone else) NetCop? People are free to post For Sale ads for anything they want to post; something the AKC might wanna keep in mind. Why do you limit it to legal stuff? Why should anyone? If you don't like posts of "illegal" amps, filter them out; it's no skin off your nose.

> 5. If any of those facts are not to your liking to the point of
> causing you grief, then you really need to get a life.

When are you going to?

> >> for you to understand?
> > >
> > >BFD.
> >
> > I think it -is- a "BFD" since that was my point in the first place.

Then why did you choose to respond to Tim at all? You don't seem to agree that hams have their own newsgroups and could just as easily post there, instead of whining all over this one, trying to play "big shot". You called it "integrity". Apparently they don't have any of that. Nor do you.

> > So why are all those other alleged hams posting here? Why aren't

> therapist to get to the root of your problem. Twisty claims to have a
> good one, but he can't seem to recall a name. Maybe he will provide it
> to you through email.

You don't read much, do you? No, my problem isn't with "hams": It's with BOZOs who whine constantly about things that have always been and that they cannot do anything about; it's with BOZOs who paint ALL CBers with the same "criminal" brush without knowing anything about them; it's with anonymous BOZOs who can't contribute anything to a conversation but third-grade playground snipes; it's with alleged hams who never seem to operate on the ham bands because they're always slumming in a CB newsgroup. Get the picture?

> >I don't believe Tim was "whining". I believe he was making a point,
> >which you obviously cannot grasp.
>
> What -YOU- couldn't grasp was the point that -I- made in response to
> Timmy's whining. And yes, Timmy was whining -- he whines constantly.
> Maybe someday he will make a positive and constructive contribution to
> this newsgroup, but I'm not holding my breath.

No, Tim was not whining. He made a valid point which you chose to ignore so YOU could whine. As long as Aanal Aaron is posting mis-information and Georgie-girl is posting nothing but sexual innuendo, where's their "positive and constructive contribution", their "integrity"? You have a remarkable double-standard going here, but it don't wash.

The typical modus operandi for our resident spinmeister. Which is why I no longer respond to his rants. It is clear to me that he wouldn't understand a clue if it fell off his porch roof and hit him square in the head.

Further evidence of his lack of understanding of RF and propagation is his dogmatic assumption that a DX signal can best a local one of the same power. I guess in his mind, path loss does not exist, and signals should never fade, and everyone should be giving you a full scale signal.

Adding a beam antenna to the mix still does not change things. The very best beam antennas available for 11 meters exhibit, at the most, about a 7 or 8 db increase over a 5/8th wave groundplane, which would still not make up for the path loss of the signal having to travel ~1000 miles or so.

I am not going to waste my time trying to educate someone that refuses to learn.

But let logic and common sense answer the question. Do you think it more likely that a signal will stay the same after traveling 1000 miles, or will it fade?
If it does fade, does it make sense that the rate of fade is proportional to distance traveled?

You decide.

Hmm... interesting. Ever thought about going ahead and getting your ham license and leaving the CB world behind? That way you wouldn't have to worry about all those "criminals" and their illegal equipment. I don't worry about them, unless they stumble into the ham bands.

The pic of your radios is kind of dark, so it's hard to see what kind of radio equipment you have.

If you're interested, my website is http://www.geocities.com/n2uhc

Or perhaps your meter has been "doctored" by a local screwdriver tech?
Maybe you don't truly understand the nature of electromagnetic
propagation? Maybe you're sharing twisty's bowl of halucinigenic
compounds?

Whichever reason, your position defies logic and RF theory. You are, in
essence, denying that path loss exists. I want to see you explain how
this is possible in detail.

Just because a product doesn't have any certifications doesn't mean it's bad. Do you have any idea how much it costs to get certifications? A lot! That's why some products can't justify getting such certifications such as UL (Underwriters Laboratories), CSA, Belcore, and numerous others. It may cost upwards of $50K for all testing involved to get certain certifications depending on your product...

Most of the people who run QRP, are obviously not obsessed with power.
So it's a "no-big-deal" to them. So, unless asked, would not usually
offer it up as a normal topic of "conversation"(If the few moments of
contact with a DX station, could be considered a conversation). The only
people I hear regularly talking about power are the amp jockeys, who
seem to define their whole existance by the amount of power they run.
It's as if they are trying to make up for a lifetime of inadequacy, and
low self esteem issues by live vicariously through their amplifiers, and
of whom, paradoxically and somewhat ironically, the "quality" of their
conversations are inversely proportional to the amount of power they
run.

That is purely a design problem.
A properly designed unit will not exhibit this "oscillation" problem that is most annoying...

Yes, but that requires another wire be run from the radio to the amp.
With my design, this is not needed because the "keying signal" can be
multiplexed right onto the coax...

The ways things are now, you'd need the General license, since the Novice and Tech + no longer exist! That is now 5 wpm code. Good luck.

Dream on, stupid! Mr. Hollingsworth only sent it on the 28th. I got it via
direct email from
him yesterday! It will appear on Rain Report next period and on the ARRL
website shortly.
And I have somewhat personal knowledge of this particular case, so go talk
about something
you know.

By the way having the amateur license will let you use one of those radios on 10m, but you're still not allowed to use them on CB frequncies. You can't for examplw use your 10m radio to talk on 27.555usb etc no matter what license you hold its still illegal.

> Jerry,tell me that you didn't turn that trucking company in?Too much idle
time.

Let's just say that I "knew" that this one was
coming.....

And IF I am traveling and I "happen" to hear a trucker beeping and squeaking
away on
10 or 12 meters, and IF I can accurately ID him, he WILL get turned in. No
ifs ands
or buts! I don't care what they do down on the 40 channels, but when they
come trespassing,.
I am not the one that gets them in trouble; they did it to themselves!

Oh, BTW, about the idle time. I am one of those lucky souls that got early
retirement, so I can
pretty much do as I please.

Jerry

CB is not as big as it once was, but is still quite useful when
traveling. Road reports, directions, and speed traps reports
are still available on all busy highways. So for a small investment
go ahead and get a CB. It's worth it.

5759. Re: rude hams

Case in point. The Shelby NC Hamfest is this weekend. This year,
as every year for the last ten, Shelby is home of the largest boneyard
(used equipment) in the Southeast. What is it full of? 10% old junk
ham gear. 90% CB amplifiers, modified CB radios, illegal imported CB
radios, modified marine & business equipment for truckers, unlicensed
low power FM broadcast transmitters, business band handi-talkies,
modified military equipment, etc. The FCC has never made ONE bust
at Shelby! Not One in ten years! Even a dumb ass can figure out the
FCC is not interested in this market place of illegal equipment.
Get a Life!

> i think your a hater JJ, your posts are always anti cb. you are just
pissed off that riley said he doesnt care if we freeband. Of course he is
not going to say this in public but the fact that twist talked with the man
direct on the phone. he doesnt care if we have cb amps or galaxy dx99s
ether. riley is a politican if you understood the way politicans are you
would know that they say things between the lines and not outright and if
you have to know what to listen for. Bottom line ham is dieing and he knows
that. Cb will be big business for manufacters once the airwaves become free.
bitch and be kilocycle cop all you want and jerry can bust his one truckstop
lol but in ten years time i will be all over 10 meters the defacto freeband,
as the man said just wait the best is yet to come.

Source record: 134836

>The ways things are now, you'd need the General license, since the Novice
>and Tech + no longer exist!

Actually the Tech "+" does still exist. The FCC no longer makes any distinction in their database between Technicians who have passed the 5-wpm code test (Element 1) and those wha have not. The privileges, however, remain the same. That is, if you are a Technician and pass the code test, you immediately have the following privies on 10-meters.

CW - 28.1000 through 28.2999 MHz
Phone - 28.3000 through 28.4999 MHz
Power Limit - 200 watts

Here's the catch. While those privies are permanent, your Element 1 Certificate of Successful Completion of Examination or CSCE is only good for one year for the purpose of upgrading to General or Extra. Kinda kooky, but hey...look who we're dealing with here. So you keep the limited HF privies, (I believe you get some 40-meter CW RF real estate as well.) but if you wait longer than a year to upgrade, you must retake the code test to become a General or an Extra. That's why most folks just upgrade quickly, less hassle.

It's also a pain, because there are OO's (Official Observers) who just live to nit-pik and will jump at the chance to point out that you're listed as a Technician in the database when they hear you on 10-meter voice. So the onus is on you to retain your Element 1 CSCE as the sole proof of your 10-meter privies. If you ever get one of these jerks OTA, just ask him/her to send a SASE to the address listed in the database and you'll send him/her a copy of your CSCE. I've seen this one in action a few times and it usually shuts 'em right up. Keep in mind that not all OO's are jerks and the ARS prides itself on being a "self-policing" service, HOWEVER... Hope that helps.

>> If I wanted to legally operate one of those 10 meter radios you can by at
>> the TA or a Pilot , lets say a Galaxy, what FCC license would I need?

A Technician "plus" Element 1 credit or higher class ticket will do the trick. Yes, there are plenty of good 10-meter rigs out there that are just fine wrt quality and signal "purity." (Despite some of the grumbling you'll hear on the newsgroup.) These are generally the single sideband rigs. I use a President Lincoln (An updated version of the venerable Uniden HR-2510.) on 10-meters with no problems. I've also used a Clear Channel AR-3500 and found it to be a great rig too. Stay away from the AM/FM only rigs with features like echo, reverb, talkback, etc., they're really not suitable for amateur ops on 10-meters. Folks on 10-meters generally use CW, USB, and a little FM higher up on the band. Good luck, you'll do just fine.

>for examplw use your 10m radio to talk on 27.555usb etc no matter what
>license you hold its still illegal.

Good point. I forgot to mention that in my reply to radiofun. It's not illegal to modify the rig as long as you only transmit on those frequencies for which you're licensed. Remeber, the rig doesn't push the P.T.T., the op does. Once again, good luck.

-
Twitsy, do you think that a 4 watt signal that travels 1000+ miles
picks up strength because it is DX? <

Man, whoever taught you that a DX signal picks up strength was wrong.
****
>Sorry Twitsy I nor anyone who elmered me has ever thought that except
you <

I never thought that. You enetered it into the equation as a redirect,
but failed. Your apology is accepted.

>Remember just because you say it doesn't make it so. <

"Fraid it does when I say it. Unlike you, I put forth no BS.

>The path loss at ~1000 miles is going to be greater, DX conditions or
not,<

That is one of the most ridiculous statements you have posted to date.

>Twisty, he is corrrect and you don't have a clue about path loss <<

Comprehension problems are mounting with your anger. Read it closer.
What you are taking issue with is your selective and biased
interpretation of what was actually said. You made the same err by
mentioning
DX strength increasing.
Let's see if I'm wrong.....if it's 1000 miles, it's DX. He said "DX
conditions or not."

>Ok here again Twisty trys to change the subject<<

The "subject" is there for everyone who gives a care to go back and
read, not what you claim it is.

>and say how far DX is who cares his point was 1000 miles or better
there is Path loss regardless if you want to call it DX or not 1000
miles might not be DX to those on HF, but to a Cber such as yourself it
is. That has nothing to do with the fact that a signal at 1000 miles
away in no way shape or form can overpower the same wattage signal 2
miles away all radio equipment(antenna, coax loss/length) being equal <<

Another unqualified entry.
No one said "all things being equal" until just now, and it was you. No

matter.
My mentioning of a beam predates your squawk about "all things being equal."
If you really want to learn, start asking pertinent questions instead of personal ones that you can't get over..
****
>Ill ask again how do you know the FCC's procedure any better than anyone else on this NG. <

I doubt it's "better" than anyone else in this ng. , just those that prove it, like yourself Hall, and a few other malcontent hammies that run around with an erection over cbers.
Also, putting words in peoples mouths and entertaining yourself isn;t really productive.

>Besides your opinion of course.

It's all usenet. Take it all for what you pay for it. Some of us have learned who the real deals are. You didn;'t make the cut, in case no one. bothered to inform you.

>If you are clueless yourself.? <<

Your world has always been based on "what if's".
****
>And your is based on lies and distortions of the truth,
and of course just your opinion and never any technical evidance to back up your wild claims.<

Back to failed attempted character assassination? Frustration and desperation are emotions you never have masked well. You have always been a "wear-my-hard-on-my-sleeve" type ah guy.

>determines that a particular station is running power, when they're receiving it from a distance? There are formulas for calculating path loss.<<

And they are null today.
They can pinpoint you with amazing accuracy from Maryland, determine the power you're running, all from a keystroke.
The formula days are way gone.

>Twitsy listen to yourself stammering. So the formulas are no longer good since they use computers now to do the calculation? <<

Didn't say they were no good.
YOU did and entered it in the equation. The effectiveness of said formulas and calculatons are nort being questioned by anyone excepet yourself.
****
>Ok what does the word :Null and gone" mean in your vocabulary? <<

I used the word "null". Go back and read it in it's proper context. It stands.

>and null not me again you Twistyed the post not me I know the formulas
<<

The maybe the feds can call you when their direction finding equipment
breaks down. Maybe Lelnad can fix the stuff by programming the proper
equations and you can fed him the formulas.

>still work how do you think a computer figures it out ? Uhhh duhh it
has the formula plugged in already ...<<

Which wasn't an issue until you drew yourself a semantic but failed
argument.
Glad you're having fun and enjoying myself.. Self-entertainment can be a
difficult achievement for the challenged.

****
>Oh I am sure you have first hand knowledge of being challenged you are
living proof. <

Insert insult here to make up for insecurities. Oh, excuse me, you
already did.

>In fact I have a slide rule made by Motorola that does all the
calculation for you and determines the "microvolt signal that should be
read at the reciever.
Just because you don't understand it twisty doesn't make it not so.<<

1000 miles equals DX no matter how you slice it on cb. A 4 watt legal
radio in skipland can squash the hell out of another 4 watt radio across
town from you, and a beam is only one of many factors that may take
advantage of mother nature to accomplish what you have shared with the
rest of the world you lack: Knowledge concerning cb propagation. No need
to get hostile and hurl insults over it. You're getting as bad as Hall.
****
>Ok Twisty lets get a few things straight, where did I hurl insults at
you in the previous post? <

Just to begin with, you apparently feel addressing me by anything other
than my given email is insultive....a clear illustration of street level
psychology at it's lowest and most incorrect and harmless form, along
with character assassination attempts instead of issues at hand.
Nonetheless, ask and ye shall receive. You made another two sentences
above.
Now that we resolved your insecurity issue, can we get back to the DX
debate without you coming unglued?

>Please clarify so I don't label you a liar again. <<

You may label anything you wish. It's not like you're believed by anyone
or have any credibility left or have the ability to make one believe
you. Carry on with your psychotic self.

>youOk please tell us
with all your technical jargon<<

There you go again. Your implication that I speak in "technical jargon:" indicates an admitted ignorance on your behalf. I have no inclination to teach you anything othert than what I already have over the years. You are capable, though, of learning when you keep your mouh closed and listen for once.

>how a 4 watt skip signal 1000 miles away can produce a greater field strength than a 4 watt local station and squash it as you say LOL Cb propogation is no different than any amatuer band.<<

It isn't?
You sure about that?
LOL!

>Now If I run a 4 watt radio into a dummy load <<

"If" scenarios don't cut it. Never have.Come back when you have something of substance.

>I am sure a 4 watt skip
station will squash me, But AS USUAL TWISTY WANTS TO TWIST THE POST TO NOW SAY BEAM ANTENNA ETC. TWISTY ANY CB ROKIE SUCH AS YOURSELF SHOULD KNOW THAT A BEAM WILL PRODUCE A HIGHER FIELD STRENGTH THAN A DIPOLE OR EQUIVALENT ANTENNA NOW YOU WANT TO TRY AND QUANTIFY YOUR POST AND SAY A BEAM ANTENNA NO TWISTYS WE ARE TALKING SAME EQUIPMENT FOR BOTH STATIONS. <<

No, HE wasn't.
YOU entered it in after I said beam.
Go back and see the posts, in order, unedited. Nothing was said about it being equal. Mistake-laden hammie, as usual, set forth a buncha BS about how "it COULDN'T happen". I mentioned a beam was only ONE way it could.
Now go stand next to him so we can teach both of you together.

>So I will ask you this Twisty do you know how to calculate what the path loss is for a station 1000 miles away running a 4 watt station on 27 megacycles, you pick the antenna they are using. because the 4 watt local station that you said your dx station will squash he is also running a 8 element beam so now how will your dx station with the beam squash anything?
Can't. You don't understand it well enough. <

It depends on propagation. Do you have any other learning sources besides Hall? Hint: Get many. Halll is too biased and far removed from reality to depend on for accurate and reliable information concernig anything remotely related to cb.
****
>Twisty I forgot more than you know about Cb and radios in general<

Then you wouldn't be so hostile and would share your knowledge, but you're one of those angry types. Somehow, your last statement is seeming less credible each time you make it. Under all your posted names.

Kevin, WB5RUE
-
Would that be as typical as say, oh, what someone may think of you defending Dogie, after taking your comments concerning morality and your wife and daughter into consideration?
-
Painting with a wide brush again and stereotyping is something you claimed you were against, no? But you turn around and do it in the post above.
Let me use another comparison: As bad as cb is and y'all claim you wouldn't let your children or wives listen to it......what about usenet?See, the difference is, you few come out here and rant against lousy cbers you hear on the air to cbers in here. You go on about how bad the service is and you base your opinions of our behavior on others and inferences and claim how bad it is simply because of our choice of subject matter. Yet these same hammies appear to be cliqued with Dogie. The psycho-perv has written worse stuff in here than I have EVER heard on cb. So, when someone sees you guys attacking something intangible and something in general, as opposed to the heart of the problems (hammies like N8), all the while claiming the cb band isn't appropriate for children, ignoring that this family oriented atmosphere has tried in vain to be ruined by a few nocode HAMMIES, well......some may feel it typical of all hammies. It's not,,,,,neither is your statement. Si?

>Pure BS. Who does the weather service rely on for storm spotter reports in severe weather? <<

Storm chasers. Paid professionals employed for such engagements. Hammies are a last resort.

>They don't call the untrained cbers. They call the RACES folks who undergo yearly storm spotter training provided by the National Weather Service. I don't know <

.is an understatement.

>of any ham club that has someone who calls the media. Keep guessing, maybe you will hit one right someday. <

You don't? Sure you do.....point to any of the national organization concerning hammies and you shall find a designated media spokesperson. Remeber, seek and ye shall find.

>How many times have you seen a news report of cbers in the same situation? A few times...maybe. <

Just can't help compulsory gratification gained by satisfaction with assistance from your palm by comparing hammie and cb whenever you may.

Turn on 19. Happens daily. All over the country.

>Yea, lots of flat tire reports, fender benders, <

True.

>road rage...<

Happens with or without cb.
Can we stay pertinent, please?

>real emergencies. <

Exactly. Accidents, police needed, etc. Yes, real emergencies. No need for you to undermine the facts merely because cb happens to play a pivotal and positive role on the roads except for your own benefit and self-mental masturbation.

>When reliable communications on many different frequencies are need in a real emergency where normal communications are down, it is the hams who step up and can be counted on. <

Who disputed that hams couldn't be counted on in times of a disaster? Seems to me like you hold the largest doubts of all concerning hammie

abilities and attempt to make up for it here with your banter.

>The officials don't want a bunch of idiot cb wanna play radio types around in the way. They want someone who knows how to communicate. CB has done nothing <

Except save countless lives. Ask Keith. He knows.

>and the FCC has been sorry ever since in came up with the idea of the 11 meter cb band. They, along with many others would be happy if it just disappeared. <<

Which may explain their lack of enforcement and lipservice the like of yours.

>It is because the cbers in their disregard for any rules made a sewer pit of communications out of the cb band and the FCC simply gave up.<<

Actually, it's because the feds made a horrible decision when allocating cb for it's intended purpose. See? You're still learning from a dumb cber. Blaming another is exactly what to expect from you.

>No other communications service has the sorry reputation as cb does <<

What ignorance. American hammies are known world-wide for the western disrespect generally shown toward foreigners by Americans. You typify the scenario wiht your intolerance toward views that differ from your own.

>Sorry, but the cb band has a very sorry reputation. <<

No need to apologize. I merely pointed out the untruths being told. Your last statement makes my last statement concerning American hammie reputations no less untrue, which explains your failed redirect.

>Keep telling yourself it doesn't and maybe you can convince yourself. <

It is you whom is desperately trying to convince someone of something, evidenced merely by your presence alone. As another alluded, no point to your posts, just anger for cbers.

>with all the illegal operation with modded radios, splatter amps, and other nonsense that goes on on the cb band. If cb went away tomorrow no one but the idiots who somehow enjoy being illegal would miss it. Even with the few rotten eggs we do have in ham radio, it still beats cb all over the place. <

Then why ain't you there instead of playing underground?

>I am there and that is why I have never operated on the children's band. <

Which illustrates your presence magnificently.

Another not know it all going from 4 watts to 16 is 4x the power which is an increase of 6db which in turn correlates to approximatly 1 s unit gain, 16 x 4 = 64 watts will get him roughly another s unit. So he is now up to 64 watts and has a 2 s-unit gain. Going up to 256 watts will yeild another s unit gain so far that is 3 s-units.
Give it up mike your a maroon

Welcome to the ever changing screen nic of George Busch WA3MOJ. He change's nic's more than you do underwear. That is why he changed his screen nic, because you said you were going to add him to your kill file.
In the future, just ad him, then you will notice that a week or two after that, when you stopped responding, he will change his nic again.
Now watch the rude, harassing, sexual filled response he will leave.
--
I hear ya'! someone asked what a "keyclown" was, or is. I have no clue, but I do know that it's definitely whatever fantasy Dogie and Lelnad have been porn-posting about. What's really odd is the first time this happened, Dogie got his ISP yanked and went away for awhile (Breaking federal rules, ya' know).
Lelnad threatened if I didn't go away, Dogie would come back and porn-spam the group some more. He made well on his threat.
This recent flood of obscenity-filled posts came flat on the heels of Keith defending Dogie out of the blue.....like you said...rude, harassing, sexual-filled posts.

Dave
"Sandbagger"<

Which is why they don't enforce DX laws for cb.
Thank you for clarifying my point perfectly.
Just recently they were petitioned to lift the DX law pertaining to cb and denied it. BUT, they have never enforced it and have no plans to do so.
An exemplary example of the feds giving the "wink wink" nod without actually going on record and saying it.
Nice work, Hall.

Well in your case it is not bad, it is just Illegal and your sales of just
1 amp makes you a criminal. Who cares how much it cost is that your
justification. You never ever even thought of asking to get it type accepted
since it wouldnt cost you anywhere near what you claim. Just a pathetic
attempt to sidestep your illegal ways.

So again I ask you ewhy do you claim it is a 10 meter amp. You cannot sell
you amp to hams and they cannot legaly buy it from you what is the real
truth Griffey? You call it a 10 meter amp in hopes of what?

Hall scribed:
>I've done plenty of QRP operating on 11 meters for many years. During cycle 22, while the great majority of people where climbing on top of each other on the regular 40, running gobs of power and doing nothing more than raising the noise floor, I was on some obscure frequency, working Europe and Africa with 12 watts on SSB. <

Let's go back before that, when there WAS no 40 channels. Some were doing it back then.

>But they were nowhere near "full scale". Most were in the S4 to<

The-times-they-are-a-changing.
Technology passed you along. Appears Tim is way up to date on some of the newer stuff. Some of the younger generation was raised on nothing BUT electronics, it's only natural some have a predisposition to such things.
Keep saying it can't happen.
You can't improve a manufacturers device armed with a screwdriver manual and flatead.
Much of the video generation will not only be surpassing you technology-wise (if they haven't already done so) in the next few years, they will be designing it and teaching it to you....if you care to learn.......for some old stubborns are content without proceeding.

Dave Hall, showing his inability to hold adult conversation without insult
, continued to entertain with failed character assassination attempts with:

>The typical modus operandi for our resident spinmeister. Which is why I no longer respond to his rants. <<

Your posts are preserved for posterity and all who wishes to peruse them....they are full of insults for no reason other than to signify the type person you are.

>It is clear to me that he wouldn't understand a clue if it fell off his porch roof and hit him square in the head. <

A post from hammie Dave Hall wouldn't be complete without personal attacks.
It;'s not his fault. Like so many others today, I blame part of the upbringing. He was taught no better so he knows no better. It's not completely his fault.

>Further evidence of his lack of understanding of RF and propagation is his dogmatic assumption that a DX signal can best a local one of the same power. <<

Can squash it...but let's clarify.....a 4 watt radio in skipland can squash a 4 watt radio across town......in many examples.

>I guess <

Your umpteeenth mistake.....

>in his mind, path loss does not exist, and signals should never fade, and everyone should be giving you a full scale signal. <

Stop guessing and start learning.

>Adding a beam antenna to the mix still does not change things. <

Man Oh man! That oughtta be your sig!!!
How about water, Hall? When I'm on my boat in the middle of the freakin' Gulf, does that matter?

>The very best beam antennas available for 11 meters exhibit, at the most, about a 7 or 8 db increase over a 5/8th wave groundplane, which would still not make up for the path loss of the signal having to travel ~1000 miles or so. <

And when mother nature has her skirt blowing.....all your
assumptions based on
BS gets blown out the doow...with my DX signal that can cover a 4 watt
radio across your town.

>I am not going to waste my time trying to educate someone that refuses
to learn. <

I said that to you when I came across you. It's in the archives.

>But let logic and common sense answer the question. Do you think it
more likely that a signal will stay the same after traveling 1000 miles,
or will it fade?<

We are talking about DX conditions here, during a high solar count
cycle, which kills the conversation here and now because you claimed to
know better than the world's official sunspot record keeper.

>You decide.
Dave

Denial, denial. Tsk,tsk! Like I said, it'll show up on the Rain Report next
period. Besides, Riley
emailed it to me yesterday. Believe what you like. I don't bitch about
CBers; only those who steal
frequencies they have no business using.

Fuck! Is someone not allowed to move? Bet you can't ping that address dumbass!!! You are such a genius. I have had the same ID for the past 4 years. I have had my information blasted in here many times Glad you can do a whois on a domain name and get outdated DNS servers from the bottom of the list.
But thanks for pointing that out. Need to remove the IP for that server since its no longer there.

>Yeah..you are right Bert. I'm a Tech+..but you know what all they have done
>to the structure. Good point though!

No biggie, nothing wrong with that. BTW, if you got your Tech+ BEFORE 4/15/2000, your CSCE remains valid for upgrading your ticket indefinitely...how's that for "kooky" structure? I have a friend at work who's a Tech+ and is quite happy to remain such, despite my prodding. ;-)

Another coworker, Mark, who shows up on r.r.cb every now and then is an Advanced. He too has no desire to upgrade. My point is...don't upgrade to please anybody other than yourself. See you on 10-meters, I'm monitoring 28.470 right now. Take it easy now. :-)

> BS gets blown out the doow...with my DX signal that can cover a 4 watt
> radio across your town.

Twisty the only thing blowing are your Cb myths and your hot air, look at what your basing your arguement on mother nature lifting her skirt Twistsy that is a hoot. The only thing mother nature does is allows your signal to be reflected back to a certain location it does create more energy than what was first there.But wait I see your game now, you are now saying your DX signal and not saying your 4 watt dx signal compared to a local 4 watt signal 2 miles away.

> We are talking about DX conditions here, during a high solar count
> cycle, which kills the conversation here and now because you claimed to
> know better than the world's official sunspot record keeper.

Twisty that is the whole jist of the matter you don't have the foggiest idea of what "conditions" are, pick up this months QST there is a whole section on sunspots. LOL sunspots are not amplifiers they allow the ionosphere to reflect the MUF at that particular time. If you can talk the world on 4 watts and pin anyones S meter why are amplifiers used. No one is running to your defense twisty think about that.

Marty,
Sure, it's still used. People are about the same,
some act like kids, some don't. Before 'splurging'
on a so called "10 meter" radio, I think I'd see is I
was going to be able to live with how the people act.
I think the legallity of such radios has been covered
well enough that I don't need to get into that.
'Doc

Twisty you keep getting yourself deeper and deeper. How has technology changed a 4 watt signal say from now from 25 years ago. please explain What technology has made 4 watts now better than 4 watts 25 years ago, and enough to where it will pin someones S meter anywhere in the world only on 11 meters. Boy I can't wait to hear this one.

>
> Storm chasers. Paid professionals employed for such engagements. Hammies
> are a last resort.

Again you show your ignorance. I used to live in Toronto country
and whenever the threat of severe weather arose the RACES folks
were out. The hams were the first resort. RACES maintains a
station at the National Weather Service center. The NWS alerts the
RACES folks when ever they suspect severe weather is immolate.
Keep trying but ham radio plays a major roll in emergencies that
cb never will.

>
> >They don't call the untrained cbers. They call the RACES folks who

> Remeber, seek and ye shall find.

Sure, the ARRL has a media spokesperson, but when local
emergencies occur that involve hams, the local clubs don't have to
run to the media, the media knows of the service of hams. They
don't bother with cb.

>
> >How many times have you seen a news report of cbers in the same

>
> Just can't help compulsory gratification gained by satisfaction with
> assistance from your palm by comparing hammie and cb whenever you may.

You're right, there is no comparison, hams know how to handle
emergency communications, cber don't, and officials know the
difference.

Same stuff is reported over ham VHF/UHF everyday, so cb has
nothing over ham radio there.

I have no doubts over the hams capabilities during emergencies,
they have it all over cb.

>
> >The officials don't want a bunch of idiot cb wanna play radio types

> has done nothing <
>
>
> Except save countless lives. Ask Keith. He knows.

Sorry again, but when a real disaster occurs that requires
handling communications, the last thing officials want are a bunch
of untrained cbers, they always rely on the hams. That is the way
it is no matter how you try to spin it.

>

> cber. Blaming another is exactly what to expect from you.

Agree, the FCC made a big mistake, but it is the cbers who turned
11 meters into a sewer pit of communications, not the FCC the hams
or anyone else, just the cbers with overpowered, modded radios and
splatter box linears and disregard for the rules. If the cbers
operated within the rules, 11 meters might be useful for its
intended purpose.

>
> >No other communications service has the sorry reputation as cb does <<

Just anger for cbers like you who seem angry about hams who attain
what you seem to be incapable of, and thus you what to tear down
ham radio. You seem to be a bit jealous that ham radio hasn't
degraded to the level of what cb has become.

Great outdoor market! Great place to stock up on modified marine
radios for your 18-wheeler. Also you can buy linear amps at very
reduced prices, both new and used. One guy last year was selling imported
CB radios with all the "extra" channels all the way up to 29 mhz, for only
about $150. See ya there!

We should make a Q signal for "Get a Life", say "QGL". Anyway, it's perfectly legal for hams to buy used radio equipment and modify it for ham radio use. We did that for years with business and marine radios, surplus military stuff, even CB radios modified for 10 meters. We could even get one of those CB amps and clean it up and tune it up for 10 meters.

Bovine excrement yourself. You are (again) talking about a tiny
minority of all CBer's. I do listen to CB. I've also been listening to
28.085 for a while now, and I haven't heard anything that sounds
remotely like a CBer or even a trucker. I haven't heard anything at
all, in fact, because the so-called "knowledgable" amateurs KNOW 10
meters is dead, while the so-called "criminal" CBers continue to use
11 meters without much problem.

Funny how that works, isn't it? There's about 800 kHz for 30 to 40
million CBer's to use, while amateurs have lots of unused spectrum
from Top Band to beyond 1.2 GHz, and all Georgie-girl can do is whine
and make up stories about how ALL CBers are "illegal". You must be a
mental basket case. Correction: You ARE a mental basket case. Please
seek help. Quickly!

Making a broad generalization from a few specific anecdotal instances
does not logic make. But since when do we expect anything logical from
Georgie-girl anyhow?

BTW, why aren't you actually USING one of those amateur bands?

HAHAHA!! Give us a break, willya? Funny how your face changes in each picture and you can't make out any of the alleged radios! That page hasn't changed since it was first put up and does NOT answer any of the "hard" questions. Where'd ya steal the photos from?

You haven't even fixed the counter! What's it been, two or three years now?

And there is still not a single "Voobner" in the entire USA. Try again.

I've got a receiver that works and I've been monitoring that frequency
for a while now. I've never heard anything that sounds like a CBer or
a trucker. Can you provide some proof of your statement?

And IF you're licensed, why aren't you on ten meters making use of
that frequency instead of whining about things here?

And the same thing applies to ten-meter radios (NOT "export" CBs); a
dealer can still sell any Uniden HR2510 or 2600 he has IN STOCK to
licensed hams. He just cannot "import and market" them anymore.

Funny how that works, isn't it? Wonder why Aanal Aaron can't figure it
out?

The stories of more than 10% of this countrys population are Cbers is truly
hilarious. You are the one crying listen to yourself.
Who cares what is used or not do you use every square inch of your property?
if not someone else should be able to use it.
I can make a blanket statement just like you can but I will guarantee you
that there are more amp users on CB than there is not everyone has an amp,
and there are many many illegal radios in use. Since Cb has no formal
organization funny with over 30-40 million users LOL Hams have what 600,000
licensed ops and have theArrl you would think with a roster full of 30 - 40
million users they would have some formal grass roots club. Oh well BTW what
was that call sign again are you just talkin shit again?

You're right, most good people abandon a place that's been overrun
with "the bad element". But that's why CB has gotten the way it is.
Because the good ones left and let the outlaws take over. Same with
this NG. Typically they are anonymous bozo's with names like "Richard
Cranium" who can't contribute anything to a conversation but
third-grade playground snipes.

>I don't
> worry about them, unless they stumble into the ham bands.

It's your choice to worry or not to worry. As long as you don't insist
I must do as you do.

True, they should stay down in the freeband, but if you report the
driver, it's your word against theirs. Nothing will happen to them
unless the FCC catches him. It's a little thing called proof, innocent
until proven guilty, etc... you might recognize this from the
constitution.

A simple 40 channel AM radio will serve you just fine. Keep it on
channel 19, turn the squelch up just a tad over the noise level and
you will find plenty of travelers to let you know about road
conditions ahead. As the other replies have stated, transmiting on the
10 meter band by an unlicensed operator is illegal and it's easier to
get caught talking there than on the "freeband".

1. Where does a dealer get his "stock" if the radios could not be
legally imported in the first place?

2. How is it you are so familiar with the business practices and
loopholes of selling 10 meter radios to CB'ers?

Working himself into rage, nocode "JJ" exasperated himself with:
From: radiobuff0@mailcity.net (JJ)

>Twisteboy wrote:
Pure BS. Who does the weather service rely on for storm spotter reports
in severe weather? <<

Storm chasers. Paid professionals employed for such engagements. Hammies
are a last resort.

>Again you show your ignorance. I used to live in Toronto country and
whenever the threat of severe weather arose the RACES folks were out. <<

BFD. You asked who they
rely on. T rely on paid trained professionals, not volunteers like
yourself who put yourselves on par with John Glenn.

> I don't know <

is an understatement.

>of any ham club that has someone who calls the media. Keep guessing,
maybe you will hit one right someday. <

You don't? Sure you do.....point to any of the national organization
concerning hammies and you shall find a designated media spokesperson.
Remeber, seek and ye shall find.

>Sure, the ARRL has a media spokesperson, <

But above you didn't know of any. Seems like I'm teaching you that of
what you claim you "forgot". The opinion I held is you simply never
knew, as you admitted above. Thanks for clarifying.

>but when local emergencies occur that involve hams, the local clubs
don't have to run to the media, the media knows of the service of hams.
<

But they DO run to the media, each and every chance they get. It goes
hand in hand with the ego tripping thing certain hammies like yourself
have been ruined for life over.

>They don't bother with cb.
How many times have you seen a news report of cbers in the same
situation? A few times...maybe. <

Just can't help compulsory gratification gained by satisfaction with
assistance from your palm by comparing hammie and cb whenever you may.

>You're right, there is no comparison, <<

But you keep doing it...deriving some type weird and deviant pleasure from it, as you always have since I put you underground and into my world.

Turn on 19. Happens daily. All over the country.
>Yea, lots of flat tire reports, fender benders, <

True.

>road rage...<

Happens with or without cb.
Can we stay pertinent, please?

>real emergencies. <

Exactly. Accidents, police needed, etc. Yes, real emergencies. No need for you to undermine the facts merely because cb happens to play a pivotal and positive role on the roads except for your own benefit and self-mental masturbation.

>Same stuff is reported over ham VHF/UHF everyday, so cb has nothing over ham radio there.<

Again, you are comparing the services for WHAT purpose??

>When reliable communications on many different frequencies are need in a real emergency where normal communications are down, it is the hams who step up and can be counted on. <

Who disputed that hams couldn't be counted on in times of a disaster? Seems to me like you hold the largest doubts of all concerning hammie abilities and attempt to make up for it here with your banter.

>I have no doubts over the hams capabilities during emergencies, they have it all over cb.<

If you really believed that, you wouldn't have to spout it redundantly. As others agree, it appears you have to convince yourself.

>The officials don't want a bunch of idiot cb wanna play radio types around in the way. They want someone who knows how to communicate. CB has done nothing <

Except save countless lives. Ask Keith. He knows.

>Sorry again, but when a real disaster occurs that requires handling communications, the last thing officials want are a bunch of untrained cbers, they always rely on the hams. <

Is that your way of avoiding asking Keith how much good REACT has done? By undermining the lives they have saved?

>That is the way it is no matter how you try to spin it. <

No one has disputed your soapbox "hammies can do some good" piece.
You're arguing with yourself, or is it just playing?

>and the FCC has been sorry ever since in came up with the idea of the 11 meter cb band. They, along with many others would be happy if it just disappeared. <<

Which may explain their lack of enforcement and lipservice the like of yours.

>It is because the cbers in their disregard for any rules made a sewer pit of communications out of the cb band and the FCC simply gave up.<<

Actually, it's because the feds made a horrible decision when allocating cb for it's intended purpose. See? You're still learning from a dumb cber. Blaming another is exactly what to expect from you.

>Agree, the FCC made a big mistake, <

End of story. You put a defective product on the market and you want to blame the consumers.

>but it is the cbers who turned 11 meters into a sewer pit of communications, not the FCC the hams or anyone else, just the cbers with overpowered, modded radios and splatter box linears and disregard for the rules. If the cbers operated within the rules, 11 meters might be useful for its intended purpose.<

Since youbrought up the comparisons, who is it that turned the hammie bands into those sewr pits? Former cbers? LMAO!

>No other communications service has the sorry reputation as cb does <<

What ignorance. American hammies are known world-wide for the western disrespect generally shown toward foreigners by Americans. You typify the scenario wiht your intolerance toward views that differ from your own.

>Sorry, but the cb band has a very sorry reputation. <<

No need to apologize. I merely pointed out the untruths being told. Your last statement makes my last statement concerning American hammie reputations no less untrue, which explains your failed redirect.

>I guess you think <

Another mistake. Stop guessing, and for God's sake man, quit worrying about what others think so much.

>the American cbers appear like angles to the rest of the world? I can only imagine what the rest of the world thinks when they listen in to the American cbers.
Keep telling yourself it doesn't and maybe you can convince yourself. <

It is you whom is desperately trying to convince someone of something, evidenced merely by your presence alone. As another alluded, no point to

your posts, just anger for cbers.

>Just anger for cbers like you <

Me? What did I ever do to you in your current incarnation? You have issues, junior, deep ones.

>who seem angry about hams who attain what you seem to be incapable of, and thus you what to tear down ham radio. <

I've never said a bad word about hammie radio, which is why Lelnad had to forge me.
Redirection from your self-hatred is non-productive. You are incapable of separating your emotions from conversation. As was alluded...it must be in your upbringing.

>You seem to be a bit jealous that ham radio hasn't degraded to the level of what cb has become.<

Hammie radio holds no interest of mine. By the way, it has degraded, and it is ops like you that are flat out responsible for it.

>with all the illegal operation with modded radios, splatter amps, and other nonsense that goes on on the cb band. If cb went away tomorrow no one but the idiots who somehow enjoy being illegal would miss it. Even with the few rotten eggs we do have in ham radio, it still beats cb all over the place. <

Then why ain't you there instead of playing underground?

>I am there and that is why I have never operated on the children's band. <

Which illustrates your presence magnificently.

>Which illustrates that I don't want to operate in the sewer.<

Just play with what you find there...heheheh!

I'd go with the TS 500 only because of one thing:
The Magna Force is an X-Force unit (nothing wrong with that) that has passed through the hands of what is or was some incarnation of EEI and I have no use for a company that has done the things I have seen from them. They (EEI) rank below ever Copper and H&Y on the total shitbag scale.

As I said in another reply to your ranting, hook up the antenna,
that might help you hear something. 28.085 is busy every day with
trucker activity, just because you and your equipment are
incapable of hearing them does not mean they are not there.

I'm not insisting. Everyone's free to make their own choices. But I think
you'd probably feel happier not having to worry about all the illegal
operators out there.

Let's face it, CB is a write off, legally speaking. Trying to get rid of
all the illegal operators is like trying to scoop up the ocean with a spoon.
That's why you don't see the FCC wasting their time with it, unless they
receive a few specific complaints. I certainly don't worry about illegal
CB'ers. Why should I? As long as their not on the ham bands, it doesn't
matter to me. If they're transmitting on illegal frequencies that aren't in
a ham band, why should I worry about it? If they're causing interference to
legitimate users, I'm sure those users have recourse to get the problem
resolved. It's not up to me. I'm not an FCC field agent.

As far as leaving it all behind, I've known many CB'ers who've gotten their
ham licenses to get away from the "noise" on the CB band. They've never
looked back. And many of them were freebanders.

Tom

I saw you at the last Hamfest I went to. Your belly hung down over
your belt buckle, completely covering it. you hadn't shaved in days.
your glasses were like the bottom of Coke bottles and you stunk from
not having bathed in days. Most prominet though, you had your ham
call letters on your hat, shirt, name tag, six places on your vehicle, and
you were handing out qsl cards even to people who didn't want them.
Then you waddled over to the snack bar for the fifth time in the last
three hours, where you stuffed greasy nachos down your mouth, while
cheese dribbled all over your filthy shirt.
Yup, definitely saw you at that Hamfest, a "typical" attendee at any
hamfest you go to these days!!!!

Sounds like you need to add some sort of audio pre-amp into the
transmitting radio, to boost the audio loss from the IDer.

I have several pcs of the power output pentode EL 153 by Telefunken. The valves are all NOS and unused. Power dissipation is 40W and the price is only NOK 400.- each - about $ 52.- Picture and technical data on my web site - www.demostenes.no Just search for EL 153 in the left hand corner.

Regards,

Arnold Goks�yr
DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as sockets,transformers,books,caps,resistors and other components. Web site is updated every week. You can order on-line.

> over 4 watts???

Yes, really. Read carefully. I am assuming that the S-meter is calibrated such that 6db = 1 S-unit. Increasing carrier power from 4 to 16 watts represents a gain of 6db. I didn't make that up. It was determined by the simple (and well known) formula:

db = 10 * log(P1 / P2)

Where:
db = decibels (gain or loss)
P1 = Output power
P2 = Input power

In my example, if I substitute 16 and 4 for P2 and P1 respectively, I get:

db = 10 * log(16 / 4)
db = 10 * log(4)
db = 10 * 0.602
db = 6.02

This is 1 S-unit as shown on a meter calibrated such that 6db = 1 S-unit. Obviously, if your meter doesn't follow this convention then it will indicate otherwise.

>/Try again pal......that 1st S unit will
> cost you about 100 watts and then start doubling up to about 400 and
> then it gets even harder...1 KW will net you about 4 S
> units or 24db up to S9.

I would kindly ask that you explain to me how you arrived at this conclusion. I'm not insulting you either, I would actually like to know. Going from 4 to 100 watts represents a gain of almost 14db. If an S/RF meter is calibrated such that 14db = 1 S-unit, it needs to be fixed.

I also want to know (seriously) how a 3 watt carrier can swing to 16 without being over modulated. Somebody needs to answer this for me: If a 4 watt carrier is modulated 100%, what does that make the peak envelope power?

Alan S.

rid of
>all the illegal operators is like trying to scoop up the ocean with a
spoon.

I wouldn't presume to try and "get rid of all the illegal operators". But there's nothing to prevent me from expressing my opinions in a CB newsgroup wrt illegal CB. As Dave Hall said, there are many people out there that are "on the fence" with regard to whether or not to follow the law or not. Those are the people that will hopefully read what is discussed here and decide that it might not be a good idea to break the law. THOSE are the people that we're trying to reach. Those that are hopelessly incorrigable will continue their anti-social ways until the law finally catches up with them. Of course you can't blame those of us that understand the purpose of law, from assisting the people entrusted with enforcing the law, by gathering evidence for them. It's called looking after our best interests.

>That's why you don't see the FCC wasting their time with it, unless
they
>receive a few specific complaints. I certainly don't worry about
illegal
>CB'ers. Why should I? As long as their not on the ham bands, it
doesn't
>matter to me.

Of course you're free to do as you please, but here's an example of why I would "care". Outlaw CB has been left unchecked to the point

where there are large numbers of outlaws running illegal RF amplifiers that cause RFI problems to communities. Proof that this is a very real problem lies in HR2346 which was drafted due to very real complaints by citizens and recently signed into law. The general public, press (and local government) typically do not understand the distinction between "CB" or "Ham -- they just see a "radio operator". Thanks to illegal CB ops, your legal and legitimate amateur radio hobby gets a black eye.

Secondly, illegal CB abusers generate restrictions to legitimate hams. You can no longer legally purchase an amplifier which is out-of-the-box capable of 10 meter operation. Why was this restriction placed on legitimate hams? Yep. you guessed it, illegal CB'ers. They certainly don't care if hams have to suffer for their behavior.

Those are just two examples of how the 11 meter outaw activity reaches out beyond the confines of 11 meters and into YOUR world. There are more. But even if it were just those two examples, wouldn't that be reason enough for hams to "care"?

> If they're transmitting on illegal frequencies that aren't
>in
>a ham band, why should I worry about it? If they're causing
interference
>to
>legitimate users, I'm sure those users have recourse to get the
problem
>resolved. It's not up to me. I'm not an FCC field agent.

Well it's your right to be apathetic, but I think you're being rather short-sighted, like a man who sees his neighbors property being looted and tells the looters "it's OK as long as you promise to stay off my property". That's not being a good neighbor, is it? And trusting the word of the "looters" is not being very realistic either. When they find an opportunity, they will be back to loot you "property" too.

>As far as leaving it all behind, I've known many CB'ers who've gotten
their
>ham licenses to get away from the "noise" on the CB band. They've
>never looked back. And many of them were freebanders.

I have no problem with former freebanders who've given up breaking the law. I do have a problem former freebanders encouraging radio hobbyists to freeband as a substitute for getting an entry level ham ticket. What kind of hams will they make if part of the curriculum that their mentors teach them is that "it's OK to flaunt FCC rules and freeband because you won't get caught"?

>until proven guilty, etc... you might recognize this from the
>constitution.

The FCC doesn't operate via the "normal" protocol of due process. The very term ' Notice of Apparent Liability' coupled to a multi-thousand dollar forfeiture, WITHOUT your day in court BEFORE conviction/sentencing, sure doesn't sound like "innocent until proven guilty" to me.

There are some that argue that the communications act of 1934 constitutes laws, despite not going through the "normal" legislative process and that because the FCC answers to congress, they somehow represent "elected" representation...AND furthermore, it's okey-dokey that they act in legislative, judicial, and executive capacities, all in one fell swoop...which BTW is 180 degrees opposite of our principle of 'checks and balances." <Please forgive this massive run-on sentence. Rant mode = off.> To this I say "BULLFEATHERS!"

Dave, your brother Richard was one heck of a person. He was a gentleman with a wit ("vast efforts to achieve half-vast results" - I love that quote) second to none. He certainly will be missed and I am going to write the ARRL and see if we could get some kind of scholarship fund started in his name. I certainly don't have a lot of bucks, but perhaps a number of this group would be willing .... ???

To the gang - regardless of which side of the fence we sit on, Richard was one heck of a guy. I'd hope a few would be willing to contribute a few dollars to such a fund. Here goes, I'll try the ARRL. One thing for certain - not all hams are bad guys and neither are the CB gang. We are talking about a true gentleman - one who had wit and wisdom and I don't think he ever flamed anyone.

A personal note to Dave - your brother was one heck of a guy and will be sorely missed in the groups.

73 from Rochester, NY
Jim AA2QA (sheeeet .. one of them ... c'mon guys, get with it!)

Of course it does, after all radio is a hobby and it attracts many of the same people it makes no difference if your a ham or a Cber. I still want Richard Cranium to prove to me that there are 30-40 million Cbers in this country. that would be about 15% of the population.

5897. Cobra 38 WXST question ...

Newsgroup: rec.radio.cb
Date: 2002-08-30 00:26:32 UTC
From: LinuxOP <linuxop@cogeco.ca>
Message-ID: <3D6EBBB8.386E319A@cogeco.ca>
Source record: 134925

Hi everyone, I just got 2 used Cobra 38WXST handhelds and was wondering if it is possible to listen to other frequencies with them? Reason I ask is I was looking into buying a frequency scanner to listen to rail signals (I'm a rail nut) and stupid me, I picked up these 2 thinking they were frequency scanners but I just noticed that they are actually handheld cb radios.

Thanks for the help,

LinuxOP

You know, I haven't ever given BSD a look. I've been so happy with Linux,
I've never really needed to look into alternatives. I find it easy enough
(and stable). Still, I'm curious enough to give FreeBSD a looksie. Why do
you like it over Linux?

> black eye.

And I think that resolution is stupid. Basically, it leaves it up to the local police to resolve issues regarding illegal CB'ers. Cops are not experts in radio communications any further than they need to do their jobs. Luckily, amateurs are exempt from that resolution, but most cops wouldn't know the difference between a CB, a ham radio, or a business band radio. I'd prefer to leave those kinds of issues up to the "experts," the FCC field agents. The local police has better things to do than enforce FCC rules anyway, like eat doughnuts.

> Secondly, illegal CB abusers generate restrictions to legitimate hams.
> You can no longer legally purchase an amplifier which is
> out-of-the-box capable of 10 meter operation. Why was this restriction
> placed on legitimate hams? Yep. you guessed it, illegal CB'ers. They
> certainly don't care if hams have to suffer for their behavior.

Luckily, the only restrictions are on HF linear amplifiers. And the only restriction is that a linear amplifier, if commercially manufactured, has to be type-accepted and cannot operate from 24-30 MHZ (roughly?). However, I don't find it necessary to use an amp. I've talked to hams all over the world on 100 Watts. In fact, I'm starting to get into QRP.

> Those are just two examples of how the 11 meter outaw activity reaches
> out beyond the confines of 11 meters and into YOUR world. There are
> more. But even if it were just those two examples, wouldn't that be
> reason enough for hams to "care"?

Like I said, I'm not an FCC field agent. There are illegal operators all over the HF spectrum, not just around 27 MHZ. It's not my job and not worth my time to worry about them all.

>
> Well it's your right to be apathetic, but I think you're being rather

> word of the "looters" is not being very realistic either. When they
> find an opportunity, they will be back to loot you "property" too.

This is a bad analogy, because there's a big difference between burglary and transmitting on unauthorized frequencies. A better analogy would be someone parking in a no-parking zone. Sure it's illegal, but it's not really hurting anyone. And if they get caught, then it's their own stupid fault, but I'm not going to seek out every illegally parked vehicle and call the police to have them write a ticket. Also, I won't feel sorry for anyone getting busted for transmitting on unauthorized freqs since they should have known (and probably did) what they were doing.

> I have no problem with former freebanders who've given up breaking the

> that their mentors teach them is that "it's OK to flaunt FCC rules and
> freeband because you won't get caught"?

All the former-freebanders-turned-hams I know don't operate on 27 MHZ any more, nor do they care to. They are very good amateur operators and follow the rules.

Might well be, but you might over deviate the carrier as well, better
feeding audio into it witha pre-amp first in my opinion, then start
playing with the radios settings.

Yes Tom, nice set up. I guess you don't
have to many kids running around the yard
with that trap set up :^)
I really liked the telegraph key, that's pretty cool.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

The point where you inserted the ident audio is obviously loaded by
this addition. On the 828 IIRC there are at least two points in the
exciter to feed in audio. Get a handbook or cct diagram and work it
out. If you can't, you shouldn't be inside the repeater doing mods.

I think a lot of the freebanders operate there because they want
to get away from the garbage on the cb channels, and those who do
make the jump to ham radio, as a whole, turn out to be good hams.
After putting forth the effort to earn the privilege to operate on
the ham bands, they like 99.99 of hams, don't want to see it turn
into what the cb band has become.

Heck, it exists. It is called amateur radio. The codeless tech ticket allows you a bunch of frequencies, and there are a lot of repeaters with autopatch. Myself, although I have passed three 20 words per minute tests (amateur extra twice - after a long lapse of time - and commercial telegraph), I am active on 440 MHz. I have no problem using repeaters up to 40 miles away and have used one over 100 miles away on the handheld. A few button presses and I can use the autopatch. There is no interference.

I'm getting all kinds of data signals on 10M, but not much talk. The
band seems pretty dead at times, probably because of the waning solar
cycle. But locals can be heard very clearly. If you can't even hear
local chatter, maybe you should think about a different antenna. Or,
if you are using a transmatch with a random-length wire longer than
1/4 wave at 10M, the transmatch may not be able to tune it up. Try
cutting (or lengthening) the wire by a couple feet so your transmatch
can tune it to 10M.

>And your original comment IS an assumption, "the most heavily and
>blatantly abused part of the spectrum -- the Citizen's Band". Prove
>it.

Okay:

If Usenet is any reflection of the abuse of the CB, then that should
be more proof than you will ever need. Regardless;

Nearly all the other bands require some form of licensing, which is a
form of individual accountability. The CB, of course, has no licensing

requirement, nor does it have the 'self-policing' policy of ham radio. Human nature being what it is, people will do whatever they can get away with. The CB is no exception. In fact, there is so much abuse on the CB that the FCC has basically 'given up' on enforcing the CB regs.

The number of websites condoning the abuse of CB radio is ...well, uncountable. Comparatively, there are much fewer sites that promote FM piracy; and only a handful of websites that encourage bootlegging on all of the other bands combined, including the ham bands.

The sales market of equipment used specifically for illegal CB is large enough to support several manufacturers of amplifiers and 'import' radios (both foreign and domestic), and the demand for illegal modifications keeps many golden-screwdriver techs busy on a full-time basis (heaven forbid they should find an honorable and legal occupation). Not only that, but you even have people on the internet making money by selling nothing more than the instructions needed to make these modifications. This is a huge demand, and it is not generated by people wishing to operate legally.

Also, just listen to the CB. There is constant bleeding, intentional keying on signals, people bragging about non-linear linears or export rigs, etc. And just about every night there is some moron that just wants to muck things up; someone may think it's fun to say as many cuss words as he can on the air, or to pick a fight with someone else and hide just to see if the other person shows up. Not to mention the soliciting near the truck stops, and drug dealer comm in the larger towns.

If that isn't enough proof, then you are stupid.

>How about the most USED part? The fact is that there are 30 to 40
>million CBers crammed into less than ONE megahertz, compared to less
>than ONE million hams spread out all over the spectrum. I'm willing to

>in both groups; the NUMBERS will of course be higher on CB, simply
>because there are so many more people trying to use the band, but
>proportionatly it'd be about the same. The hams have nothing to smile
>about, do they?

The proportion is going to be MUCH higher with CB because CB doesn't require licensing and doesn't have a self-policing policy. Also, how many websites have you seen where hams promote the abuse of their own spectrum? Not many. On the contrary, there are several sites where hams encourage people to abuse the CB and "freeband". So if you want to make such a comparison, how about comparing the number of CBers abusing ham bands to the number of hams abusing the CB?

BTW, you still haven't provided your callsign...

>amateurs that make rec.radio.CB a cesspool. Nice description of Doggie
>and Georgie-girl there, however!

Ok, now they are "alleged amateurs"? And what about the garbage from
the pro-illegal side? Are those posts acceptable to you? How do you
know those posts (usually anonymous) weren't made by an "alleged
amateur"? You don't, not unless you are making them yourself. Oh,
that's right, YOU are a ham, too! So what's your callsign?

>> 3. Your example of "logic" is seriously flawed, since you don't know
>> who Aaron is, and you don't know if he can use HF or not. In fact, you
>> don't even know if he is a ham.
>
>Word from people better in the know than myself is that he's a
>no-code.

Those people "better in the know" wouldn't be Phil Covington, would
they? Let me tell you something about Phil: He's a criminally obsessed
little twit, and he would probably believe Aaron was Riley himself if
his demented mind was capable of conjuring up the thought.

> That means,

That means nothing. It's simple: You don't know who Voobner is, you
don't know if he's a ham or not; and because you don't know that you
can't know if he's a no-code. You pressed me for proof after accusing
me of making assumptions, now it's your turn.

> at best, he cannot use HF at all. Ergo, he has no
>reason to whine about "intruders" on ten meters, does he? If he holds
>NO license, he has even less reason to whine. And there's no evidence,
>as Tom Sevart stated, that he has ever operated a radio at all. Again,
>there's this thing YOU brought up about "integrity".

There's no evidence that YOU have ever operated a radio yourself! So
if all you are here to do (in a CB newsgroup) is to disclaim Voobner's
statements, then "by your own logic", what reason do YOU have to even
be in this newsgroup? I'll even answer that one for you: Because you
have the right to express your opinions, just like Voobner does, and
just like I do. You have the right to complain about Voobner all you
want, and he has the right to give you things to complain about. And I
have the right to show you where you are wrong. Such as your "logic".

And yes, I brought up the issue of integrity. What's your callsign?

>> 4. ANYONE has just as much right to voice his opinions in this forum
>> as you or I do (provided it isn't illegal, such as libel, threats,
>> advertising CB amps for sale, etc...).
>
>That's true;

And that's all there is to it.

> but who appointed you (or anyone else) NetCop? People are
>free to post For Sale ads for anything they want to post;

Not if it's an amplifier capable of operating on the CB. Or haven't
you been reading Voobner's posts? I'm sure he will provide you with
the proper information showing you where you are wrong.

> something
>the AKC might wanna keep in mind. Why do you limit it to legal stuff?
>Why should anyone? If you don't like posts of "illegal" amps, filter
>them out; it's no skin off your nose.

You are totally ignoring the purpose of discouraging illegal behavior.
By your "logic", if you don't like thieves stealing your tools from
your garage then you should just ignore them. That's a pretty good
plan as far as the thieves are concerned, huh? You wouldn't happen to
be one of those 'thieves', now would you?

>> 5. If any of those facts are not to your liking to the point of
>> causing you grief, then you really need to get a life.
>
>When are you going to?

Contrary to popular opinion, I have a life. It may not be the way I
planned; in fact, the plan is constantly changing. But that's the
wonderful nature of it all. But I certainly don't have such a narrow
focus in my life akin to your anti-Voobner campaign. But hey, if
that's what you want to do with your life, that's your business.

>> >> But you still haven't addressed my point, and I'll simplify it for
>> >> your benefit: Tim was whining about hams but I'm not a ham, I'm a
>> >> CBer. I don't usually post on ham newsgroups because I'm not a ham. I
>> >> post on the CB newsgroup because I'm a CBer. Was that simple enough
>> >> for you to understand?
>> >
>> >BFD.
>>
>> I think it -is- a "BFD" since that was my point in the first place.
>
>Then why did you choose to respond to Tim at all? You don't seem to
>agree that hams have their own newsgroups and could just as easily
>post there, instead of whining all over this one, trying to play "big
>shot". You called it "integrity". Apparently they don't have any of
>that. Nor do you.

Actually, I have mentioned several times that hams should take there ham discussions elsewhere. In fact, since illegal operation is closer in comparison to ham radio than it is to CB radio, the illegals should go there as well.

But I responded to Timmy's post because he grouped me in with other "alleged amatuers", of which I am not. Or were you unable to understand my response to his post? Let's read it again, shall we?

>I'm in here because I'm a CBer. I am not a ham (yet), and that's
>probably why I don't post much on ham newsgroups. That's not
>hypocrisy, that's integrity. Learn the difference.

Looks like I wasn't agreeing OR disagreeing with his statement, except for the fact that I am not a ham. I was speaking for myself, not the other "alleged amateurs" that Timmy was whining about. So why do you think that I was speaking on their behalf? Did I write something that I didn't understand? No, I don't think so. The problem is that YOU didn't understand what I said, you just jumped to the conclusion that I was speaking on behalf of those "alleged amateurs".

>> > So why are all those other alleged hams posting here? Why aren't
>> >they in rec.radio.amateur.misc or some other ham newsgroup?
>>
>> Because they are able to post, because there is nothing preventing
>> them from posting, and because they have chosen to do so. For any
>> other reasons you will have to ask them.
>
>Well now, how about that? I can post here, too. You don't like it?
>Turn it off or tune to a different channel. Take your own advice,
>dimbulb!

I do take my own advice quite often. But right now I choose to exercise my freedom of expression, just like you. You can't prevent me from posting and I can't prevent you from posting. The only thing either one of us can do is to prevent ourselves from posting. So this will probably continue until you run out of excuses, or get tired of trying to defend your BS, and choose instead to stop posting. Or, you can follow Twisty's example and just start posting nonsense. But then, just like Twisty, you will end up in just about everyone's killfile, including mine, and lose what little integrity you have left. Speaking of integrity, what's your callsign?

>> > They are
>> >accomplishing nothing by trolling here. And they will accomplish
>> >nothing as long as they choose to waste their time.
>>
>> Evidently they are accomplishing -something-, as you seem to be
>> offended by their posting. But you (and Timmy) seem to be similarly
>> offended by MY posting. And you have never voiced your disagreement
>> with the "QRM" from proponents of illegal operation. So clearly your
>> problem isn't with hams, but with something else. I recommend a
>> therapist to get to the root of your problem. Twisty claims to have a

>> good one, but he can't seem to recall a name. Maybe he will provide it
>> to you through email.
>
>You don't read much, do you? No, my problem isn't with "hams": It's
>with BOZOs

...ok, now they are "BOZOs", not "alleged amateurs"?

> who whine constantly about things that have always been and
>that they cannot do anything about;

That's the kind of apathy that is shared by people that feel they have no control over their lives and surroundings. Fortunately there are many people in this world that have the fortitude to swim against the current, because if those people didn't exist we would still be living in the dark ages, or maybe under an oppressive dictatorship. That might be your idea of an ideal government but not mine.

> it's with BOZOs who paint ALL
>CBers with the same "criminal" brush without knowing anything about
>them;

Now THOSE people I can live without. Care to point them out?

> it's with anonymous BOZOs who can't contribute anything to a
>conversation but third-grade playground snipes;

I agree with you there, because although you are anonymous, your snipes have been on par with fifth-, or perhaps even sixth-graders.

> it's with alleged hams
>who never seem to operate on the ham bands because they're always
>slumming in a CB newsgroup. Get the picture?

I get the picture very clearly.

You know what I have been doing lately? Besides working my regular jobs, I have been rebuilding my garage, taking dancing lessons with my girlfriend (I should post one of the videos for a really good laugh, but you know I won't -- suffice it to say I look ridiculous), helping out my mother with stuff she can't do anymore, and designing and building a tube-type lowfer receiver. I don't mix at the club anymore (the keyboard player is too much of an asshole), but I am helping the new sound jockey with his homebrew 300B stereo amp (and it's a real monster!)

I am also working on getting my ham license. There sure are a lot of things about propogation that I have forgotten since college, I'll tell you that much. Not only that, but I picked up my first two ham radios in the past month: One is a Heathkit HW-19 (ok, it a CAP radio, but with a VFO it should work just fine for ham); and I found a Swan 500 in really great shape (and for an even better price).

But YOU spend your time talking on the CB, chasing Voobner on the newsgroups, and scanning 10M looking for illegal operators just to dispute him. That's truly pathetic, dude.

Seriously, what is it that they say that bothers you so much? Are you an illegal operator that can't stand people telling you that what you are doing is illegal? Or if someone says something bad about CB radio, do you actually take it personally? I get the picture VERY clearly. Get a life. And this time when I say "get a life" I really mean it.

>> >I don't believe Tim was "whining". I believe he was making a point,
>> >which you obviously cannot grasp.
>>
>> What -YOU- couldn't grasp was the point that -I- made in response to
>> Timmy's whining. And yes, Timmy was whining -- he whines constantly.
>> Maybe someday he will make a positive and constructive contribution to
>> this newsgroup, but I'm not holding my breath.
>
>No, Tim was not whining. He made a valid point which you chose to
>ignore so YOU could whine. As long as Aanal Aaron is posting
>mis-information and Georgie-girl is posting nothing but sexual
>innuendo, where's their "positive and constructive contribution",
>their "integrity"? You have a remarkable double-standard going here,
>but it don't wash.

Tell you what: You go ahead and believe what you want. Post whatever misinformed, deconstructive, and obviously subversive anti-ham propaganda you want. But next time you want to reply to one of my posts that has nothing to do with you, try to understand it first. Then try not to jump to the conclusion that I am speaking on behalf of any of those "alleged amateurs" or "BOZOs", or whatever you choose to call them depending on your mood.

Now if any part of this post was beyond your ability to understand it, I'm sure you will reply. But don't get discouraged, you aren't doing too bad for a fifth- or sixth-grader.

There aren't that many. More likely would be less than 1 million - judging
from the lack of antennas on automobiles and houses.

True

> Human nature being what it is, people will do whatever they can get
> away with. The CB is no exception. In fact, there is so much abuse on
> the CB that the FCC has basically 'given up' on enforcing the CB regs.
>

I think your partially right. Yes the abuse is, constant
arguing, swearing, musicals, threats and such. That
does happen because as you said there is no "real"
licensing of the individual using the band.
The FCC won't act on any of the above, but
run big watts, interfere with you neighbors electronic
and they will come out and visit.

> The number of websites condoning the abuse of CB radio is ...well,
> uncountable. Comparatively, there are much fewer sites that promote FM
piracy;

Really, check just the first of some 41,000 plus sites
I found:

http://www.blackcatsystems.com/pirate/stations/

>and only a handful of websites that encourage bootlegging on

>I couldn't agree more and remember this is from people who have been there
>
>

Cocaine is nothing but BAD. The people who say they can control IT are lying to
themselves, or don't have the money to spend on it. Been there, done that, got
the t-shirt and the record to prove it. It started as a small amount, maybe
twice a month,circa1985. Then ecalated rapidly to an eighth of an ounce or more
a week. I realize this doesn't appear to be alot to people without jobs, but to
a person with a 8 to 5, safety sensitive job, it is alot of missed sleep. At
first, the sex was great, did it more ways than the law allows. But this
rapidly faded into nothing. The major concern just becomes getting more of the
shit. When the supply of powder became harder to locate in this area, crack was
always available. So, this became the easiest way for me. Did that for about 5
years before being caught in a suviellance camera and getting arrested. Got 4
years defferred ajudication, meaning that if I don't get in trouble for the
time on probation, I will have no conviction on my record. Just recently
finished that sucessfully. Actually, in Texas, you can get off probation by
doing all your community service(120 hours for me), and doing 1/3 of the time,
which I did. Cost of my fun, about $7500 for the lawyer and the probation fees.

You know, the bad part is that I still crave the shit. But, now I know the white monster is always lurking in the back of my mind, and I cannot surrender to the call.

Incidentally, I did lose one friend I grew up with, to suicide, directly related to cocaine. Also, a co-worker aqquired AIDS through the sharing of needles while injecting the shit. That was in the early days of AIDS, when everyone thought they would never get it. He is DEAD now.

In closing, the only real advice I have for anyone thinking of trying the shit is.....PLEASE DON'T DO IT! DON'T DO IT FOR ME, THOSE THAT LOVE YOU, YOUR WIFE, HUSBAND, GIRLFRIEND OR BOYFRIEND. IN SHORT, DON'T EVER TRY COKE. IT IS NOTHING BUT A FELONIOUS WASTE OF MONEY.

I can't make it any more simple than that.

See Ya, Randy

Dear CB Radio fans, I'm new to the field of CB radios just having today purchased two used Cobra 38 wxst. They both run very well and I've already some interesting conversations going on the airwaves. Now, my question is: When I press the talk button, I can hear myself but I don't get any confirmaiton from others, it's almost like they don't hear me. Am I doing somehting wrong? I can hear them fine, once I apply the proper DSS mode.

Thanks for the help,

LinuxOP

>and they will come out and visit.

Very rarely. A while back I quoted a newspaper article for Twisty
about an old lady that had to sue her neighbor for causing a nuisance
with his radio. The FCC didn't do squat. They usually don't unless you
have persuasive evidence that the person is operating illegally, or if
there are many complaints from different people about the same
operator. Otherwise, expect your complaint to be ignored.

>> The number of websites condoning the abuse of CB radio is ...well,

>> occupation).
>
>And most pirate fm stations are using ham
>equipment, with usually the help of a ham.

Really? I thought they were using kits, like those Berkeley transmitters, or some other home-brew transmitter + amp (some places sell pre-built 'exciters', but are quickly shut down by the FCC). I don't recall seeing any sites that mention the use of ham equipment. It takes some mighty extensive modifications to turn a 6M or 2M ham rig into a continuous-transmit FM stereo station at 100 MHz. It's much simpler and cheaper to build the stuff from kits. Of course, some people don't like things that are simple and cheap, even if they happen to work better. But if you say that most pirate FM stations are using ham equipment then it must be true.

>> Not only that, but you even have people on the internet
>> making money by selling nothing more than the instructions needed to
>> make these modifications. This is a huge demand, and it is not
>> generated by people wishing to operate legally.
>>
>
>Also the same could be said for pirate fm stations.

Not quite. Bandwidth on the FM broadcast band is at a premium, so you can't fit too many stations in there. Also, a whole lot more people listen to FM radio than CB radio, and most won't tolerate someone jamming their favorite station. FM piracy isn't quite as bad as you seem to be saying.

>> Also, just listen to the CB. There is constant bleeding, intentional
>> keying on signals, people bragging about non-linear linears or export
>> rigs, etc.
>
>Agreed, but I don't hear the comments about using linears
>and export radios that you talk about that much.

Then you don't listen to the "superbowl" much. I can't blame you there...

>>And just about every night there is some moron that just

>> cuss words as he can on the air, or to pick a fight with someone else
>> and hide just to see if the other person shows up.
>
>Just like here right? Just like the amateur newsgroup right?

Just like any other newsgroup that tends to draw uncivilized cretins. There a few differences, tho: There are tens of thousands of newsgroups while there are only 40 CB channels; You can't step on someone's signal in a newsgroup; and on the radio, that behavior is illegal. YOU are comparing apples and oranges.

Well, since he previously admitted to being a ham, I would hazard a
guess that here he's admitting that he "never seems to operate on the
ham bands because" he's "always slumming in a CB newsgroup". That's
almost a cry for help.

Nope, no kids yet, just a couple of dogs. I had to attach the guy ropes of that antenna to that tree and to the privacy fence we put up to keep the dogs from eating them. One of our dogs ate an antenna lead-in wire that runs along the bottom of the house.

The telegraph key was given to me by another ham. When I got it, the brass was all black. It took a lot of polishing to get it that shiny.

I know it wasn't your intention, but your statements about how the FCC
regulates the airwaves sounds like sour grapes complaining, when you
can't get away with breaking the law.
I can't recall one case where a person was operating 100% legally, and
was handed an NAL. However, if the person is guilty of breaking the law,
why should they be allowed to hide behind legal red tape? The system
works as intended. If you have nothing to hide, you have nothing to
fear.

If you are going to break the law, you have no right to complain when
you get caught. Just be glad you were able to get away with it for as
long as you have.

Tech pluses are in a strange predicament. The license class no longer
officially exists, but they can hold on to it indefinately. But he FCC's
database will eventually drop the "+" designation, and the plusses will
be lumped in with the no-codes, and it will be harder to prove you
actually have code credit. The general test is so simple, I can't
understand why these guys don't upgrade when they get the chance.

>
> Another coworker, Mark, who shows up on r.r.cb every now and then is an
> Advanced. He too has no desire to upgrade.

With the advanced class, there is a bit of elitist snobbery involved in
some cases. Since there is no distinction between an "old (20 WPM)
extra, and a "new" (5 WPM) extra, the license to have now is advanced,
since you had to pass 13 WPM to get that ticket.

Many die hard CW types, who hold advanced class licenses, refuse to
upgrade further as they wish to continue to show the world that they
"earned" their license by passing CW the "old way", and not have it
"handed" to them by only needing to know 5 WPM.
It's all about status, whether real or perceived.

I'm not going to weigh in on either side of this one, as I really don't
know where the FCC is in this case. I have read the language, and I can
understand Aaron's strict interpretation of it, but I can also see a bit
of "wiggle" room for existing radios. In past cases, the FCC has always
grandfathered existing radios, and allowed them to continue to be used
and resold among the people that are authorized to use them. I don't
know why that would change now.

That's ok. I see the pattern of denial. There are no bootleggers on 10 meters, a 4 watt signal can peg every meter in the country, there are more "bad" hams then "bad" CBers, amplifiers do nothing to add to the hetrodyne noise when the skip rolls in, most CBers are running legally, and of course, that coax length actually matters.

The myths and "science" of the CB band. You might think this is an alternate reality. I guess for some it really is......

"Sandbagger"

5971. SBE Console V AM/SSB CB base FS/Swap

Newsgroup: rec.radio.cb
Date: 2002-08-30 12:20:26 UTC
From: Bill <wdecker1@rochester.rr.com>
Message-ID: <eqJb9.158346$vg.26820953@twister.nyroc.rr.com>
Source record: 135042
Cross-posted to: rec.radio.cb,rec.radio.swap

Acquired in an estate, this is a nice example of what the big "showboat" SSB bases were back in the day. Nice wooden cabinet, dual multifunction meters with such neat-o features as indicating the squelch threshold level, scan function, etc., etc., really is a very attractive rig.

Cosmetics:
Minor scuffs along bottom edges of wood case sides.
Front panel very clean, little to no lettering wear, some minor scuffs.
On/off switch outer sleeve missing, almost unnoticable. I am trying the junkbox to see if I have one for it, but no promises.
Inside quite dustfree, no corrosion. No signs of ever being touched!
No extra holes, etc., overall 7.5-8.5 condition.
Enough bright colored lights, switches, etc. to keep you occupied for a while!

Electrical condition:
All lights, LED segments, meters, etc. function, looks sharp.
San function works great.
Most pots, switches, controls are very "scratchy" from long storage and need a good cleaning.
RX audio present (need to fiddle w/dirty switches to bring it up) at a low level, w/o an antenna.
TX relays engage properly.
No antenna/dummy load to check for TX/RX operation on air, but my suspicion is that it needs little more than a good cleaning of the controls and a quick tune up to get it into operation.
NO mods done ever, or so it appears, although easily done for those so inclined, the wax is still intact in the coils and no apparent clip and snip work. I think the older gentleman who owned this was a straight arrow and took nice care of his toys. OH, and the rig doesn't smell like an ashtray, either!!!! Non smoking owner.

Includes stock hand mike. Overall a big impressive high end rig.

One of these with an intermittant PLL just went on fleabay for nearly $100 plus the freight, looking for $75 plus shipping, or will swap for excellent 25LTD Classic/antenna, good clean used SSB mobile, export mobile, etc., will trade up/down/sideways (plus/minus cash). Need a good mobile rig for the RV. Serious email replies only, please, I don't make deals on the newsgroup. Tell me what you've got to swap.

Evidence of illegal operation, plus the volume of business selling
illegal radios, amps, and modifications, would tend to contradict your
assessment.

> I do listen to CB. I've also been listening to
> 28.085 for a while now, and I haven't heard anything that sounds
> remotely like a CBer or even a trucker.

Now that the skip is on the downswing, you will likely only hear the
guys that are local to you. Where are you? Certainly not in one of the
busier metro areas, or you would most certainly hear some traffic.
Especially in the NYC area.

> I haven't heard anything at

> million CBer's to use, while amateurs have lots of unused spectrum
> from Top Band to beyond 1.2 GHz,

So, you are attempting to justify illegal encroachment into ham frequencies because hams have unused space and the "poor" CBers only have 400 Khz worth of channels?

Hey, nobody's using your car right now, I guess you won't mind if I "borrow" it?

> Making a broad generalization from a few specific anecdotal instances
> does not logic make.

Oh-so-true. Remember that when you try to make claims about "Bad" hams and how they outnumber "bad" CBers, or that there really isn't an illegal operator problem on 11 meters.

That isn't what I said. I said I've been listening and haven't yet
heard any. Don't you have any reading comprehension? Oh, that's right;
you like to twist things to suit yourself. You poor little man.

And once again, somebody tries to divert attention so Aanal Aaron
won't be on the spot. The question was asked of him: "Do you even have
a receiver?" I'm forced to believe the answer is no.

Twisty is not about to "explain" anything, because he knows little if
anything about radio, other than which end to plug the mike into and
which end goes to the antenna. This latest product of hopelessly
festering brain cells is illustrative of just how off-the-rails he is.

> What technology has made 4 watts now better than 4 watts 25 years ago, and enough
> to where it will pin someones S meter anywhere in the world only on 11
> meters. Boy I can't wait to hear this one.

I'm laughing myself silly on that one too. A 25 year old 4 watt signal
is not as "enhanced" as a 2002 4 watt signal?

Or perhaps he was attempting to allude to improved receiver design.
Well, even if that were true, they could not overcome the laws of
physics, and a (Albeit stronger) DX 4 watt signal, would still have more
path loss than a 2 mile local one, and would still get crushed by it
every time. If improved receiver design allowed me to hear the same DX

stations that ran between S4 and S7 20 years ago, to jump to S9 signals, I guess that still means that the local signal at +20 db over S9 would jump to +30 over. The ratio would still be the same.

The real kick-in-the-pants laugh is that CB radio "technology" is frozen at the 20 year old level. For the most part, a Cobra 148, for example, is still the same design as it was when it first came out in the 1979-1980 time frame. Most CB radios still use descrete transistors in most circuits, have not taken advantage of surface mount techniques, or VLSI integration.

For the "screwdriver tech" and truck stop mod jockeys, this is a good thing. The cost of repairing and modifying a VLSI radio with surface mount parts would be beyond most of these guys' capability, and would require specialized solder stations that cost thousands of dollars, or risk "buggering" the radio beyond hope.

If CB radio were to truly "evolve" into modern technology, they could make an AM/SSB radio the size of a pack of cigarettes, where the antenna and mike plug would be the largest pieces.

In order to have some credibility when dealing with a subject (like CB radio) it helps to have some personal experience with it. It's tough to accept the validity of your point, when you have no point of reference.

People will be less likely to take you seriously when you offer up all sort of opinions regarding CB and CBers when you've had no direct contact or experience with them. Your opinions will appear anecdotal in nature.

One would wonder, if you do not like, nor intend to own a CB, why you would expend effort interacting with CBers on a newsgroup? I don't own, nor ever intend to own a Persian cat, but I'm not on the cat newsgroup talking down cats either.

I would tend to agree. CB usage peaked in the late 70' during the "fad"
days, when almost every other car had an antenna, and most neighborhoods
had at least a half dozen each.

Today, other than truckers, there are very few vehicles with CB
antennas. Cell phones have pretty much replaced CB as the "fad" of the
21st century.

The people still into CB are into it as a hobby, and tend to run "high
perfomance" (Unfortunately mostly illegal) equipment, and usually gaudy
and outlandish mobile antennas.

But the sheer number of CBers has definitely dropped over the last 20
years.

You've just proven my point for me: Ten meters is dead "because of the
waning solar cycle". Yet 11 meters is still hopping. And it's that way
most of the time. The difference in frequency (about 1 MHz) does not
explain why I can hear one but not the other. Let's face it, it's the
hammies creating a huge mountain out of a small molehill. They just
gotta have something to whine about or they're not happy.

> >And your original comment IS an assumption, "the most heavily and

>
> If Usenet is any reflection of the abuse of the CB, then that should
> be more proof than you will ever need. Regardless;

It isn't and it doesn't. Since most of the QRM in the newsgroup comes
from disgruntled (and obsessed) amateurs and there is zero correlation
between what's going on here and what's happening on the air.

> Nearly all the other bands require some form of licensing, which is a

Let's rephrase that just a little: "Human nature being what it is,
people will do whatever they can get away with." Ham radio "is no
exception."

> The number of websites condoning the abuse of CB radio is ...well,
> uncountable. Comparatively, there are much fewer sites that promote FM
> piracy; and only a handful of websites that encourage bootlegging on
> all of the other bands combined, including the ham bands.

You're not very well informed, are you? There are plenty of FM
"pirates". I believe the FCC shuts more of them down than they do
"illegal CBers".

> The sales market of equipment used specifically for illegal CB is
> large enough to support several manufacturers of amplifiers and
> 'import' radios (both foreign and domestic), and the demand for

> making money by selling nothing more than the instructions needed to
> make these modifications. This is a huge demand, and it is not
> generated by people wishing to operate legally.

Manufacturers do what they have to do to stay in business. Since they
can't sell enough equipment to amateurs, of course some small amount
of it finds its' way to "other applications". It is not the intention
of the manufacturers to encourage illegal uses, but they've gotta make
a buck. And there are plenty of "golden screwdriver techs" hacking
amateur radios, too.

I only know one amateur who has not wide-banded his equipment. And he
does have the information, should he need to do so. Information is not
illegal. Wide-banded radios are not illegal. Only certain USE is
illegal.

> Also, just listen to the CB. There is constant bleeding, intentional

Also, just listen to 75 meters any night of the week and you'll hear
exactly the same thing. Your point?

> If that isn't enough proof, then you are stupid.

Proof? You still seem to think that ONLY CBers do these things. I
haven't seen any proof. Not from you, not from Jerry, not from Aaron,
not from Doggie, and certainly not from Georgie-girl.

> The proportion is going to be MUCH higher with CB because CB doesn't
> require licensing and doesn't have a self-policing policy.

No. NUMERICALLY it may be higher (simply because there are many, many
more CBers than there are licensed hams); proportionately I'm willing
to bet it is not.

Also, how
> many websites have you seen where hams promote the abuse of their own
> spectrum? Not many. On the contrary, there are several sites where
> hams encourage people to abuse the CB and "freeband".

Well, SHAME on those hams for creating such a problem on CB!!

So if you want
> to make such a comparison, how about comparing the number of CBers
> abusing ham bands to the number of hams abusing the CB?

Given the miniscule number of hams (comparatively speaking - what,
about 600,000, maybe?) and the vast spectrum available to them, you
could be correct about that. But you think they don't?

> BTW, you still haven't provided your callsign...

I won't, either. Not until Aanal Aaron posts his (and he'll never do
that, will he?).

> >> Because I'm a CBer, I'm a legal CBer, and I'm a CBer that's concerned
> >> about the future of CB radio. Why are YOU here?

Then the best thing (and, in reality, the ONLY thing) you can do is
operate properly and stay legal, isn't it? You really think that more
than a handful of CBers read the UseNet? What do you (or Aaron, or
Jerry) think you are accomplishing here? I'll tell you what: Aaron
starts flamewars based on his wildly inaccurate mis-interpretation of
FCC Notices and letters, and when he gets backed into a corner by
people who are in the know, he drops that thread and starts another
one. Jerry and Georgie-girl are plain impotent. And you aren't doing
anything worth-while, either; you're wasting your time.

> >I'm here to correct the misinformation Aanal Aaron puts out every day.
>
> Such as...? Are you here saying that CB amplifiers and freebanding are
> legal?

I'm saying that he spews misinformation, and that has been detailed in
the thread about "Legal" eButt..." Look it up.

> >> >> > But
> >> >> >Jerry doesn't dare post a callsign,

Apparently that statement simply isn't true. You read Tim's post, you
deliberately mis-interpreted Tim's post, and you responded to Tim's
post. Where is this so-called "self-control"?

> >> 2. This newsgroup has been filled with "crap" since it first began.

Of course they can. It's as easy as typing an ad for legal stuff. If
you don't like to read them, use your filters and don't look at them.
Funny how everyone else can filter and use kill-files but you don't.

And I highly doubt Aanal Aaron can provide anyone with "proper
information". He never has and he most likely never will. He might
provide HIS take on something, but it won't be the truth.

> You are totally ignoring the purpose of discouraging illegal behavior.
> By your "logic", if you don't like thieves stealing your tools from
> your garage then you should just ignore them. That's a pretty good
> plan as far as the thieves are concerned, huh? You wouldn't happen to
> be one of those 'thieves', now would you?

No, if I don't like thieves stealing tools from my garage, I bring my
tools inside where I can protect them; I don't leave them where
someone might take them. I don't go out with a scattergun and shoot
everybody for blocks. And I certainly don't go into their houses,
which is an approximation of what the "alleged amateurs" are doing in
this newsgroup.

And "discouraging illegal behavior" makes you a dork in the eyes of
anyone who does such things and has no effect on their behavior
whatsoever, does it. And it makes you a "goodie two-shoes" to most
anyone else. It's not your problem (you said you run legal on CB),
right? Why does it matter to you what other people do? If you're not a
ham, why should it bother you that the occasional trucker (or
whatever) mistakenly uses a quiet frequency within the edges of an
amateur band?

Oh boy, the "illegals" are much closer to CBers than amateurs. CBers
don't have licenses; illegals certainly do not have licenses. Amateurs
are supposed to have licenses. Where's the commonality?

> But I responded to Timmy's post because he grouped me in with other

I don't recall that Tim lumped you with anyone. If you took it that
way, it's your problem. And apparently you took it that way.

> >I'm in here because I'm a CBer. I am not a ham (yet), and that's

Or maybe Doggie's example. Or Georgie-girl's example. Or even Aaron's
example. You're in really good company there. Congradulations on your
choice of friends.

> >> > They are
> >> >accomplishing nothing by trolling here. And they will accomplish

> >> to you through email.

I am offended by Aanal Aaron's deliberate mis-information, and I am
somewhat offended by Georgie-girl's lame attempt to provoke people
with sexual innuendo (and that's all he ever posts, you notice). But
precisely WHAT is all this accomplishing? It only makes them look like
idiots.

> >You don't read much, do you? No, my problem isn't with "hams": It's

> 500 in really great shape (and for an even better price).

A couple of real boatanchors there! Good luck with the Swan. They're
one strange radio, in general.

> But YOU spend your time talking on the CB, chasing Voobner on the
> newsgroups, and scanning 10M looking for illegal operators just to
> dispute him. That's truly pathetic, dude.

Wrong again. I don't talk on CB anymore (although I used to). I don't
bother "chasing Voobner" - he posts enough right here to keep my

fingers sore. And I am taking JJ's advice looking for those "intruders" he claims are in the bottom end of 10 meters (and I have not heard yet). Actually, I'm trying to confirm his statements; I just haven't been able to. That's not pathetic, that's "active".

> Seriously, what is it that they say that bothers you so much? Are you
> an illegal operator that can't stand people telling you that what you
> are doing is illegal? Or if someone says something bad about CB radio,
> do you actually take it personally? I get the picture VERY clearly.
> Get a life. And this time when I say "get a life" I really mean it.

IF I was an "illegal" operator, I wouldn't care what they said. The fact is that it offends me to see those low-lifes rain on everybody's parade, just because they're anally-retentive. Hell, if they said it once and moved on it wouldn't bother me at all. But Aanal Aaron has been corrected so many times that it's absurd, and he STILL doesn't acknowledge that he doesn't have a clue what is reality.

> >> >I don't believe Tim was "whining". I believe he was making a point,

If you're not speaking on their behalf, then why did you post at all? You certainly were being defensive. Oh, I forgot: Like Aanal Aaron, you just have to prove that you're right. Maybe you ARE Aanal Aaron??

And just where (and how) did you come up with this "obviously subversive anti-ham propoganda"?? What a diaper-load!

> Now if any part of this post was beyond your ability to understand it,
> I'm sure you will reply. But don't get discouraged, you aren't doing

Ohhhhhh, a PUT DOWN. I'm crushed! Now take your own advice and be sure you understand my posting before you bother to reply.

Not even close. Try the 75 meter phone band. THAT's a real slum!

I stated that YOU are "slumming in a CB newsgroup". Nice try, but you
need a lot of work on your so-called "style".

And why aren't you on one of those precious amateur bands, running
illegal truckers out? Afraid you'll actually run into one?

Can you disprove it Georgie-girl? It is an approximation, of course.
Given the number CB antennas I see on houses and other buildings, I'd
say it's a pretty fair estimate.

I'm still laughing about the "anti-key clowns"; sound like you're all
charter members of No Code International!! HAR de HAR!

Where's Rochester, Georgie-girl? You don't know nearly as much as your
ego leads you to believe you do.

As Aanal Aaron always says, you'll just have to dig a little deeper!
;)

It's strange, because where I live you will see a lot (though still in the minority) of vehicles with CB antennas, yet you hardly ever hear anyone on the air besides truckers. Leads me to think that these people either don't ever turn their radios on, or else the CB antennas are just for show.

>I know it wasn't your intention, but your statements about how the FCC
>regulates the airwaves sounds like sour grapes complaining, when you
>can't get away with breaking the law.

Quite correct, Dave. Although I'm often happy with the "ends," I deplore the "means." That certainly doesn't mean that I don't want regulation of the airwaves, I'd just like the "laws" legislated like any other laws. I'd like to see those accused to have their day in court (NOT administrative, one with a jury.) before a judge...again, NOT an administrative judge who works for the FCC. BTW, did you know that if the FCC hands you a NAL, it's on you to drag the FCC into court to prove your innocence? Like I said, I applaud the FCC for what they do with such limited resources...but this IS the U.S.A. and I would expect criminal actions re. the airwave to be handled like any other criminal actions. No sour grapes here, I run a clean ship and have long simce outgrown my "wild oats" period.

>I can't recall one case where a person was operating 100% legally, and
>was handed an NAL.

Me neither, but that really doesn't make it right.

>However, if the person is guilty of breaking the law,
>why should they be allowed to hide behind legal red tape?

Because that's our system...and it happesn to be about the best on the planet, by far! If they're guilty, let Riley earn his keep and try them to a successful conviction.

>The system
>works as intended. If you have nothing to hide, you have nothing to
>fear.

Theoretically true, but innocent folks have fried (literally) on death row because of this attitude. BTW, I AM for the death penalty...but that's another story for another day.

>If you are going to break the law, you have no right to complain when
>you get caught. Just be glad you were able to get away with it for as
>long as you have.

Agreed! I think you understand where I'm coming from.

Frank, off and running at something he knows absolutely nothing of,
tried and lied with:
The number of websites condoning the abuse of CB radio is ...well,
uncountable. Comparatively, there are much fewer sites that promote FM
piracy;
-
Bullshit.

Frank, that was only "One" website of thousands, so
a lot more than just a "couple hundred stations "
Hell in High school I knew five guys that competed
against each other with 'Pirate" fm stations. that was a
small town of only 5 thousand people.

Well one site did, but it again was just an example, I didn't
really bother with searching some 41,000 plus hits for that.
I looked briefly this morning at another, it said he was a
ham running modified ham gear, so they are no saints either.
Now I'm not claiming that all hams do this, but neither do
the vast majority of cb'rs do illegal things too.

>

True, but so were you. You agree that it's ok to
swear, accuse, threaten, post porn, filth, flood the
newsgroup just because it's a cb newsgroup? So
when someone says they are kill filling people, others
change their nics to by pass it, just like following someone
to another channel and harassing them there, right?
My point Frank, is human behavior, to which you hit
on several times. The problem isn't illegal amps, radio's,
it's human behavior. Look at a few of the people that
troll this group, do you think they talk like that on
the ham bands? Of course not, same could be said for
some of the people that are just cb'rs.
Hell look at the thread that was cross posted from
XP/linux newsgroups, just like this one, but not
wanted.

You see Frank we're not to far apart on opinions.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

> How has technology changed a 4 watt signal say from now from 25 years ago. please explain<
-
Begin N3CVJ' daily and direct insult ranting against those who hold a different view:
>Twisty is not about to "explain" anything, because he knows little if anything about radio, other than which end to plug the mike into and which end goes to the antenna.<

And this upsets you why?

> This latest product of hopelessly festering brain cells is illustrative of just how off-the-rails he is. <<

And your overt concern for my world affects you even more than my technological
savy that makes you act like a tantrum-throwing spoiled child does.

>What technology has made 4 watts now better than 4 watts 25 years ago, and enough to where it will pin someones S meter anywhere in the world only on 11 meters. Boy I can't wait to hear this one. <

Dunno..you said it......

>I'm laughing myself silly on that one too. A 25 year old 4 watt signal is not as "enhanced" as a 2002 4 watt signal? <

Glad he is entertaining you.

>Or perhaps he was attempting to allude to improved receiver design. <<

Poor Hall. Afflicted with the same malady of seeing what's not there. It's called "hallucination". You have asked about narcotics several times...I suggest you stop. Their use is causing you to ramble and imagine things.

>Well, even if that were true, they could not overcome the laws of physics, and a (Albeit stronger) DX 4 watt signal, would still have more path loss than a 2 mile local one, and would still get crushed by it every time. <

Now it's the enitre world that you hear laughing this time..at your statement.
It is apparent you don't understand what you profess, as the scenario I am describing is a perfect example of physics,,,,albeit a part you are not the slightest bit familiar with.

>If improved receiver design allowed me to hear the same DX stations that ran between S4 and S7 20 years ago, to jump to S9 signals, I guess that still means that the local signal at +20 db over S9 would jump to +30 over. The ratio would still be the same.
<

Stop guessing.
It screws you all the time.

>The real kick-in-the-pants laugh is that CB radio "technology" is frozen at the 20 year old level.<<

Have fun, Hall! This is where you share some of that hatred bottled up inside of you....

> For the most part, a Cobra 148, for example, is still the same design as it was when it first came out in the 1979-1980 time frame. Most CB radios still use descrete transistors in most circuits, have not taken advantage of surface mount techniques, or VLSI integration.
For the "screwdriver tech" and truck stop mod jockeys, this is a good thing. The cost of repairing and modifying a VLSI radio with surface mount parts would be beyond most of these guys' capability, and would require specialized solder stations that cost thousands of dollars, or risk "buggering" the radio beyond hope.
If CB radio were to truly "evolve" into modern technology, they could make an AM/SSB radio the size of a pack of cigarettes, where the antenna and mike plug would be the largest pieces.
Dave
"Sandbagger"<<

Now he's worried about "evolving" and he was the one screaming about the "way it was" and "the golden days" and how it "used to be" with the war stories.
You can't handle evolvement. You come unglued.

I'll certainly go along with that. The first letter's usually a warning to "cease and desist." So many dolts simply ignore this 'get out of jail free card.' I still don't like the idea of one "commission" acting in all three capacities outline in the principle of 'checks and balances.' IMHO, the FCC really should only act in the executive capacity, a.k.a. enforcement.

Nothing will happen to them
unless the FCC catches him. It's a little thing called proof, innocent
until proven guilty, etc... you might recognize this from the
constitution.
-
The FCC doesn't operate via the "normal" protocol of due process. The
very term ' Notice of Apparent Liability' coupled to a multi-thousand
dollar forfeiture, WITHOUT your day in court BEFORE
conviction/sentencing, sure doesn't sound like "innocent until proven
guilty" to me.<
-
Certain requirements must be absolutely met long before an NAL may be
issued. A hammie's recording of what he claims is a cber means nothing
in the eye of the law.
And yes, even the FCC has to obey certain protocol. For instance, if
they show up to inspect your station..simply alllow them in after
confirming their identity. Say nothing. You don't even have to answer
their questions if you don't want to. Merely show them your legal
station and kindly show them the door. They may NOT open doors, closets,
drawers, etc. They may merely "observe" your station and nothing else.
An NAL isn't issued without proof. Base this on how many were challenged
and dismissed.

N3CVJ flubbed with:
>That's ok. I see the pattern of denial. There are no bootleggers on 10 meters, a 4 watt signal can peg every meter in the country, there are more "bad" hams then "bad" CBers, amplifiers do nothing to add to the hetrodyne noise when the skip rolls in, most CBers are running legally, and of course, that coax length actually matters.
The myths and "science" of the CB band. You might think this is an alternate reality. I guess for some it really is..... <

That frustration you are experiencing is leading the way to desperation.
Really, Hall, engaging Aaron in your mythical conversations?
You're right where you belong.

Yes, Twist...that's exactly how I meant it. You are correct though.
"Technically," 11-meters IS a slightly better DX band than 10. However, the
difference is almost imperceptible and thus negligable. Take it easy. BTW, good
points re. my FCC rant.

Some have been asking for a final version of my "1pill" amplifier so I have decided to go ahead with the PCB layout and have a few boards made for prototypes. This 1x2879 amp will be extremely clean (very low harmonics!) and will have fully regulated class AB biasing. I will be posting details and specs regarding this new design at my web site via a link soon.

OK twistieboy you are not wrong, I don't own a cb, but my Collins
75a3 receiver tunes 11 meters because when it was manufactured 11
meters was a ham band, so I can tune the cb band. Also have you
ever heard of a general coverage receiver? Memory? (chuckle)

I have had personal experience with cbers, they come up to 10
metes and try to answer cq's and talk to hams or operated and
interfere with ham radio. I have also listened enough to the cb
channels to know it is a garbage band. I have no quarrels with
those that stay out of 10 meters, but when these idiots trespass
in the ham band with their modded overdirven splatter boxes then I
get concerned with the cb crowd.

LOL, so you pick one or two frequencies where there are some hams
that act like cbers and try to say that is what ham radio is like.
What a laugh! Tune across the ham bands and 99.9% of the operation
is just hams having a nice conversation, but tune any cb channel
and all you hear are modded overdriven splatter boxes operated by
a bunch of morons.

Granted. And even others stay at entry level and become part of the problematic hammies. These have come to be known far and wide across the internet what a dearly departed email buddy used to refer to as "Lifers."

>Yes, Twist...that's exactly how I meant it. You are correct though.
"Technically," 11-meters IS a slightly better DX band than 10. However,
the difference is almost imperceptible and thus negligable. Take it
easy. BTW, good points re. my FCC rant.

Tuck all you want. Perjury proof of what? You don't believe I have
a 75A-3?
So why do I need to upgrade to a lot of push buttons and fancy
features? The Collins equipment give me everything I need. What
more do you need to talk with someone on the ham bands. Does a
$3000 Kenwood sound any better than the Collins? Can it make any
better contacts that the Collins? Is it any more reliable than the
Collins?

Why? It hears perfectly well on 10 meters.

I certainly wouldn't believe YOU. You encouraged a guy to get his new
amplifier modified for CB. You claimed ALL 10-meter radios were
somehow "illegal". You didn't know that amateurs are exempt from
equipment type-acceptance requirements. You don't seem to know much of
anything, in fact.

All I said was that *I* hadn't heard anything there yet.

And you don't see Aanal Aaron's "pattern of denial"?

Nobody said there "are no bootleggers on 10 meters", except YOU; I
said I haven't heard any yet. Nobody said "a 4 watt signal...", but
it's quite possible when propogation is rolling. And nobody said there
were MORE "bad" hams; in fact, I claim it is more-or-less
proportional.

I guess when you have no case you just have to make things up. Yup, I
see the pattern of denial, all right! Talk about shooting yourself in

the foot!!

It's obviously "reality" for Aanal Aaron, JJ, and Georgie-girl. And apparently for you as well.

So, with that admission, how can anyone believe your crap that ALL
CBers are "criminals"? You're talking out both ends now.

Since Cb has no formal
> organization funny with over 30-40 million users LOL Hams have what 600,000
> licensed ops and have theArrl you would think with a roster full of 30 - 40
> million users they would have some formal grass roots club. Oh well BTW what
> was that call sign again are you just talkin shit again?

And the ARRL represents what, about 25% of all licensed amateurs in
the USA. They speak for themselves, not you or any other hams.

> > Making a broad generalization from a few specific anecdotal instances
> > does not logic make. But since when do we expect anything logical from

> > Georgie-girl anyhow?

What? No witty and totally stupid retort, Georgie-girl?

> > BTW, why aren't you actually USING one of those amateur bands?

I ask again- Why aren't you actually USING one of the precious ham bands instead of making absurd posts in a CB newsgroup? Or have you been kicked out of the "fraternity"? If you used 10 meters, you might run one of those truckers out, but you'd rather whine and whine and whine. Poor little boy; my heart is breaking for you!

Brian,
That's interesting. Seems to me that the required circuitry
for producing the 'multiplexed signal' would have to be in the
radio. So using your 'COR' system, which is incorrectly named
any way, means another set of hands messing around in your radio
to install it.
Then, you would need additional circuitry in the amplifier to
decode this 'multiplexed signal'. I don't know about anyone else,
but that seems a bit too complicated and expensive to replace a
simple piece of wire between radio and amplifier. And what's the
big deal about one more wire between pieces of equipment? It's
done
all the time, no 'biggy', and has the benefit of being cheap and
simple.
'Doc

Goodie for you. I've been listening and still haven't heard a thing.
Not even a ham. Yet I can hear folks on CB. Wonder why that is..?

What is funny, Mark, is that for the price of that all mode xceiver and amp, you could have a reasonable transceiver with access from 160 to at least 10 and likely above. Oh, and you won't need that kind of power for worldwide communications either. Funny, as the sunspots sink, one is left with sporadic e propogation once you're above 21 MHz (and 15 gets real spotty too when you start getting near the bottom). A lot of time, effort, and money spent just to avoid a test that 8 year olds have passed. Hmmmm ...

You're are correct that any way you slice it... a mod has to be done to the
radio.
However, with my multiplex scheme, the mod is very simple and it does
eliminate the need to run an additional wire to from the radio to the amp.

No doubt - amateur radio and cb radio have lost a bit of usefulness with the cellphone now. I finally started to realize how inexpensive the cellphone has become when a friend told me (about 2 years ago) he was paying $59.95 per month for UNLIMITED airtime on his cellphone. Almost makes ya want to disconnect the hardwired telephone service (even without my DSL, I'd be paying around $35.00 a month for local service).

Simple - ask for a radio check until someone gets back to you. This is
best done on channel 19 during the day, unless you've got a good group
of locals around at night on another channel.

You consider getting the west coast from Missouri "DX"? The station I heard in West Malaysia today from the mobile is DX. Stations from anywhere in the US, Canada, Mexico or Carribean are not considered DX to me. When the cycle is in effect, contacts to Europe are commonplace from here on the east coast. From Missouri you should be able to get some south pacific when conditions are right. South America is pretty common from the east coast as well. Try listening in the freeband.. you'll hear a lot of DXing..

This ain't:

>I've been listening to the low end of 10 meters the last few days
>and I haven't heard anything remotely sounding like an out-of-band
>CBer.

A bit of honest advice. Your laughable attempts to discredit people and third-grade schoolyard taunts make you sound really desperate and panicked. You might want to try transitioning to a more factual style if you want your defense of "illegal CB" to be taken seriously. That is, unless you're just trolling for trolling's sake.....

The receiver isn't the issue, this is a schoolyard game: you want to
ask me questions while refusing to answer questions asked of you. Two
kids on a playground shouting "I asked you FIRST!" and "NO! I asked
YOU first" - ad nauseum. After a few rounds, they start calling each
other names. Then they start shoving, a teacher breaks it up, parents
are called, etc.

OK, let's play!....

What's your callsign? I asked YOU first :)

If a ham wishes to join the ARRL's cause they can and do, so we have
someone fighting for amateurs rights, and what do Cbers have Davemade and
Texas Star LOL.

> I ask again- Why aren't you actually USING one of the precious ham
> bands instead of making absurd posts in a CB newsgroup?

Who said I am not using the ham bands? If assholes like you would stop making absurd posts perhaps my post count would also go down. When do you find time yo use the radio? If you would read the previous posts I use the ham bands daily I talk and listen while I sit here and type I know you can't do 2 things at once with your handicapp but most of us can and do Yeah I am a real ham with a real shack with real Ham radios, a computer, a Big screen tv, scanner, dvd entertainment center all with in a remotes reach.

> Or have you been kicked out of the "fraternity"? If you used 10 meters,
you might
> run one of those truckers out, but you'd rather whine and whine and
> whine. Poor little boy; my heart is breaking for you!

I use 10 meters almost daily how about you? Oh that's right your not a ham. You also must have me mistaken for someone else I don't cry and have never cried about truckers on 10 meters you had better drop back and punt because you are now sounding like twisty and making shit up as you go. So far in this post you have lied about 4 times and made countless false accusations. I still am waiting for your callsgin , 30-40 million Cbers proof , where I cried about truckers, and lets see I know there is more ... Oh well I don't ever expect to get any real answers from you anyhow you'll just duck em like usual.

Not only can't anyone answer that for You , But it's none of God Damn Business .
Let's get clear on the fact that every time I see Your faggot ass up here trying to post crap in an effort to start some shit with People that You don't like because Your jealous of them making a few square deals and You seem to act like Their depriving You of making some sort of deal , I am going to slam You like You need to be slammed .
So carry Your nosey ass back to the cb news group where You came from and break bread with someone that will listen to Your bull shit .
I'll also tell You this , I don't mind You posting shit about Me because I am going to attack You personally without pulling any stops . now get Your test tube ass to stepping You incest bread Son of a Bitch

This Guy needs His ass kicked
From: "Buyer Beware" <BuyerBeware@hotmail.com>
Subject: K5MDM : BUYER BEWARE
Date: Thursday, August 29, 2002 12:41 PM

Look at how this guy rants and raves at things he does not like,. Do you want to buy from someone like this? If you think he is giving such a great deal I suggest you look at some honorable stare registered retail dealers. Their used prices as good or better than Murray (a peddler, not a dealer) and they will give you guarantees. See if they swear and bash others..if they do, don't deal with them either. Buying from people who swear and bash other only enables their outrageous behavior.

If you fell I am bashing Murray, you are correct. But read the tread from the beginning and you see Murray started the bashing. My original post did not attack nor bash anyone until these people (AC5TX and K5MDM) attacked me and are not intelligent enough to discuss a subject with out insulting the poster. So Murray and John...keep you blow job and other insulting remarks coming. You only point out the good hams should boycott your behavior. It is unbecoming to the hobby.

If you think I am a hypocrite...I am not selling you anything, they are. Do you really trust them?

Yes I can disprove it just as you approved it there are less than 2 million cbers in the USA. And my opinion juts as yours is based on reality 30-40 million people is over 15% of the population, No where on gods green earth are there that many people using CB's It is archaeic it went out in the 70's, when people hear someone say Hey I talk on the Cb, they look at them like they have a 3rd eye. So your saying in your part of NY there are 15 out of 100 who talk on the cb.

> I'm still laughing about the "anti-key clowns"; sound like you're all

Boy I'll tell You this shit is really getting boring .
Here We have an asshole that appears from nowhere and decides that selling radio's makes You a crook and in the process trying to slam everyone with a reply post . Then We have several People that feel as I do that are trying to make there position clear as far as dealing with these Guy's .
Mr. buyer beware I would like to know Who the fuck called you on board to make the accusations that You are making ? and what piece of gear did You buy that wasn't right ?.
Of all the postings I have seen so far regarding both of these Gentlemen , not one refers to getting ripped off with the exception of Your posting's .
I ask again Did You get ripped off by either one of these Guy's . Would You like to share Your story with Us ?
maybe You should stick to the fact that You are truly a medical marvel as it seems that Your Daddy had to have fucked Your Mother in the ass to make a worthless piece of shit like Yourself.
I'll tell You what , Why don't You go to rec.radio.cb as You would fit right in , But here You may slip and let Us know Who You are and then You just might get the fucking shit beat out of . You dickless Pussy

You tell me.

A. You don't know where the 10 meter band is.
B. Your receiver doesn't work on 10 meters.
B. You forgot to switch from you cb rig to the 10 meter rig.
C. You don't know how to connect an antenna.
D. You can't recognize truckers talking when you hear them.
E. All of the above.

Oh, please. I doubt that any ham that has HF privilages posts or even cares about this newsgroup. The hams on here either talk on the legal 40 or they freeband because they haven't upgraded, otherwise I doubt they'd have any interest in the CB newsgroup since ham radio offers so much more once you've gotten your general ticket. The only use a ham has for CB is channel 19 when they're out on the highway and they need to get traffic reports. This leaves you as either a ham that enjoys the legal 40 (but that's not likely because you are denying using a CB) or more likely, you freeband like many hams without HF privilages.

Looks like he got what he deserved. You do the crime, you do the time.

Makes me wonder about cases like that... must have some kind of mental condition that makes them act like morons on the radio. I remember a case in England back around 1990 of a ham who constantly jammed up repeaters. After being repeatedly convicted & fined huge amounts, he still managed to find his way back to the airwaves to do the same stupid shit.

Quite meaningless stuff. Why would you push 2 values just to discard them
immedeately after. Not to mention that you load AX in a rather convoluted
way just before. Even a compiler should generate better code, except one
written by you

This code you show is just garbage. Let us know when you have some real,
handmade code to show off

Oh please what? Yes I am a ham, Advanced class so I have plenty of
HF privileges, and no I don't, never have operated on cb or the so
called freeband. And your are correct, amateur radio does offer
much more that cb unless you're into operating at illegal power
levels using illegally modded radios driving splatter boxes as a
lot of cber's are. Many cber's don't want to upgrade to ham radio
for the very fact they would be expected to obey the rules.

Does any one know of any problems associated with the Galaxy 99? I am thinking about buying one and having it converted over to 11 meters. I am going to buy the radio more or less because of the toys which come with it! I don't even plan on using the 10 meter side of the radio at all. However I do want to cause hate and discontent at the truck stop while I am getting my 8 hours of rest. You know just to pass time! And yes I will be running a 250watt kicker behind this just for fun.
Save your flames and keep the smart ass remarks to yourself cause I could care less what you think about me wanting to cause hate and discontent at the truckstop!!

Heehee! Don't worry. There will be! I just got an email from a friend of
mine in, shall we say,
a position of "knowledge" concerning one of those truck stop CB shops
alongside an interstate.
We keep telling you that the party is OVER for the bandits and thieves that
steal frequencies for
their own use despite their being allocated to others, and all you can say
is "old news". A sentence
pronounced yesterday is pretty darned current in my book! I mean, the man
is going to jail, faces
$25,000 in fines (maybe more after the judge studies his finances), and
still you refuse to believe that it is going to become increasingly risky to
operate a radio illegally. Most hams, including me,
don't care if illegal CBers pop each others' eyeballs out and fry them til
they sizzle with them thar
"leenyars" as long as they don't come a-callin' on the ham bands without
license.

Not if he isn't trespassing in my "pasture". And, no, I don't go around
just for the purpose of
turning in truckers and truck stops. BUT, if I am traveling anyway, I can
listen to the ham bands
and, if there is somebody there that isn't supposed to be,
then..... Or, I often need to stop
for a break, so I go to travel centers and truck stops where the food is
usually good and there
are lots of things to browse. IF they happen to be selling radios that are
helping truckers to get
onto 10 Meters, yes, I will drop a dime. It seems fair to me.

Tell me what's this?? :-)

And this:

```
let rec sort lst =
match lst with
[] -> []
| head :: tail -> insert head (sort tail)
and insert elt lst =
match lst with
[] -> [elt]
| head :: tail -> if elt <= head then elt :: lst else head :: insert elt tail
;;
```

His first mistake was doing something this stupid from a stationary position! He should have stayed one step ahead if he was going to play games with the locals!

"Cbers aren't asshole Illegals." Hey Dickhead(Richard Cranium) do you speed in your car? My bet is yes you do! So that makes you an Illegal asshole non-law abiding American too!

"Sounds like a AKC troll post. Smells like bad ham" Whatever you think Richard. Oh yea I will add the space that you didn't. Look at your post and you will see that you didn't space after the period. I guess your mouth was running faster than your fingers could talk, huh?

I am just asking a question and I am looking for some good replys about this radio. Not asshole remarks!!!!!!!!!

yeah its a pretty good radio if all you run is AM. its not the best as far as rejecting bleedover but itll do. the texas ranger 696f mobile is a good radio too.

hi my friend and welcome to the wonderful world of cb radio. it seems that your radios are working just fine. the only problem is the two units you have are designed for very short range communications only due to the little antenna used on the handhelds. if your listening during the day on these then the conversations are likely to be other base station radios skipping in from all over the country. it will be next to impossible for any of these guys to ever hear you due to the crowded nature of the 40 cb channels. i think your best bet with these will be to try and ask for a radio check like advised but to do so at night and you'll have a lot better chance because by then all the atmospheric and man made noise that plagues the band during the day will be gone and your signal will have a much better chance of being heard far away.

Wrong keyclowns...There is more to do on any 1 band than anyone could
do in a lifetime.

You sissie boys just use that 'lifer tech' crap to obfuscate your
criminality. All the insults on earth cannot change the fact that you
are all a bunch of federal criminals. Insult some more, your pink
muffin attempts at defocusing are humorous and ineffective, except to
your fellow morons.

6120. Re: 10 meter r.r.c.b. frequency?

Newsgroup: rec.radio.cb
Date: 2002-08-31 02:52:18 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <un0bsl7ipns387@corp.supernews.com>
Source record: 134996

Most likely that most of the guys interested in dx later in the day drop down to 20. In fact, 10 is quite underutilized - 15 gets some good use, but 20 seems to be 'kilowatt alley'.

73 from Rochester, NY

scott@ovis.net wrote in message news:wfUb9.236774$me6.32344@sccrnsc01... Does any one know of any problems associated with the Galaxy 99? I am thinking about buying one and having it converted over to 11 meters. I am going to buy the radio more or less because of the toys which come with it! I don't even plan on using the 10 meter side of the radio at all. However I do want to cause hate and discontent at the truck stop while I am getting my 8 hours of rest. You know just to pass time! And yes I will be running a 250watt kicker behind this just for fun. Save your flames and keep the smart ass remarks to yourself cause I could care less what you think about me wanting to cause hate and discontent at the truckstop!! Scott**********
PERFECT CHOICE RADIO JUST THE RIGHT AMOUNT OF BELLS AND WHISTLES

Agreed, that's the point I was making. But
to compare illegal cb use with a newsgroup or
the web is not the final word. He also agreed
that too.

I see Doug's using a new account, wonder why <G>

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Who cares, you posted it once that's enough.
This is very close to spamming if not flooding the
group.

To : MLITIA@ALLUS

KJ6Q Sent this message out, which compares the attacks on militias with other
historical events. I want to rebut this message with the following points.

KJ6Q's text:
In 1917, our government decided Germany was EVIL, and with the help
of the media, persuaded the citizens of the U.S. to hate Germany, and
send our young men in the armed forces to kill them.

MY ANSWER: Totally false. We fought in WW1 Because the British, French, and Italian armies were totally exhausted. The American public did not need the government to make them hate Germany. The use of submarines against unarmed ships for the 3 years prior to our involvement, with great loss of American lives, the execution of captured British Red Cross nurses, and the murder and
rape of thousands upon thousands of civilians in countries conquered by the Germans were all the justification a nation with a conscience needs to take up arms against another.

--
KJ6Q's text:
In 1941, our government again decided Germany, and also Japan, were
evil, and with the help of the media, persuaded the citizens to hate
them, and we sent our young men in the armed forces to kill them.

MY ANSWER: Again, totally false. The Germans under Hitler perpetrated the most
disgusting and evil campaign of conquest, slaughter, and social barbarism the
world has ever known. 6 million Jews, 20 million Russians, and millions of soldiers from over a hundred countries testify to the paganism of the Nazi's with their grave markers; or in many cases their scattered bones or piles of ashes. Regarding the Japanese: they were involved in a bloody war of conquest
against China for 10 years before Pearl Harbor. In one city, Nanking, the Japanese murdered 200,000 residents with bayonets alone. There exists a famous
photo of a fetus impaled with it's mother on the end of a Japanese bayonet. Couple this with the Pearl Harbor attack, the Bataan Death March, and the supreme price paid by anyone, even in the Japanese government, who stood in the way of the Japanese military, and you have more than enough reason to

act
in the name of humanity to stop a nation of murdering, plundering slime that made Atilla the Hun look like a Cub Scout.

-
KJ6Q's text:
In 1950, our government declared North Korea was evil, and with the help of the media persuaded the citizens to hate them, and sent our young men in the armed forces to kill them.

MY ANSWER:(this is getting BORING!) Again, totally false: At the February, 1945 conference at Yalta the Russians (Stalin) told Roosevelt and Churchill That they wanted the northern half of Korea at the end of the war. At the time i
it was agreed between the 3 powers that the Russian and American areas of control would be split at the 38th parallel. This was all because Japan had previously conquered Korea and was using it as a giant prison and slave labor
camp. Hence, at the end of WW2 we had North Korea and South Korea. 5 years later, in June of 1950, South Korea was attacked by the Russian and Chinese supplied "North Korean People's Army". The reasoning is simple: Russia wanted
control of South Korea, which had began to become a prosperous and decent land to live in. This was much in contrast to the north, which was a sterile dictatorship under the puppet rule of Kim Il-Sung, who admired the tactics of
the Nazi's in matters of territorial consolidation. Instead of rebuilding the
north, the communists sought to conquer a nation that was rebuilt with help from America, and steal the wealth for themselves. I think a moral country should fight against such a thing.

--
KJ6Q's text:
In the mid 50's, our government decided the Viet Cong were evil, and with the aid of the media, convinced many of our citizens to hate them, and we sent many of our young men to kill them. But many citizens began to distrust our government, and many young men refused to go, or kill.

MY ANSWER: I am sorry to say that KJ6Q is 100% right on this one. However, if
one looks at the aftermath of the fall of Saigon, with the genocidal campaigns
against former South Vietnamese soldiers and government officials, one can can see why we opposed the North Vietnamese.

-

KJ6Q's text:
It is now 1995. Our President and government has declared that the militias, and those who distrust government are evil, and with the help of the media are trying to persuade our citizens to hate them, and send our armed forces to....

I wonder how this one will turn out?

MY ANSWER: The campaigns by the Administration and various liberal groups in the wake of the OKC bombing are stupid, reactionary, and counterproductive. It is well to speak against them. However, it is grist for the mill of the freedom restricters to post such a misinformed and cockeyed set of views such as this. The liberal weenies will take one look at KJ6Q's post and KNOW that he doesn't know a damn thing about history and the government, or for that matter know how to construct a support for his views based on documented
facts. I can just see some democrat dunce from the northeast counter-posting on the nonsense of KJ6Q's train of reasoning.

We have to present an image and show a desire for clear, reasoned discussion.
We KNOW the liberal leaning weenies don't have a leg to stand on, let's just not give them ammunition to cut us down by presenting them with arguements that don't hold water.

Freedom also means freedom to be a jackass...Look at the liberals!

That's my point Jim, they are virtually
untouchable. They are not accountable to no
one but themselves, as Bert put it "no checks
& balances"

Landshark

--
Freedom of speech, of the press, of association, of assembly and petition -
this set of guarantees, protected by the First Amendment, comprises what we
refer to as freedom of expression. The Supreme Court has written that this
freedom is "the matrix, the indispensable condition of nearly every
other form of freedom." Without it, other fundamental rights,
like the right to vote, would wither and die

Then you don't listen much. I have seen it lots of times where just 20
kHz will make a difference. Other times skip will be rolling through
almost the whole of HF. What do hams call that -- the highest
effective frequency for a certain type of skip, or something like
that? Well, as the sun spots fade, that freq is going to drop. At
sometime or another it's going to be between bands. Care to take a
guess where it is now?

> Let's face it, it's the
>hammies creating a huge mountain out of a small molehill. They just
>gotta have something to whine about or they're not happy.

No, YOU face THIS: The problem is NOT between CBers and hams, it's
between legal and illegal operators. You can try and divert attention
away from the real reasons for this conflict, but it won't work,
because people are not as gullible as you think. Well, ok, some of
them are. But the majority isn't buying it.

>> >And your original comment IS an assumption, "the most heavily and

Well, I see a lot of "QRM" from anonymous crybabies that can't prevent
themselves from getting worked up over generalized statements made in
a newsgroup.

>> Nearly all the other bands require some form of licensing, which is a
>> form of individual accountability. The CB, of course, has no licensing

>
>Let's rephrase that just a little: "Human nature being what it is,
>people will do whatever they can get away with." Ham radio "is no
>exception."

That's true, and hammies don't get away with very much when they try.
That's because hammies police their own. Hey, you're a hammie, you
should know that already, right?

>> The number of websites condoning the abuse of CB radio is ...well,
>> uncountable. Comparatively, there are much fewer sites that promote FM

>"illegal CBers".

That's true, there are quite a few FM pirates. But when compared to
the list of illegal CBers (amps and freebanders), the list is quite
small. And yes, the FCC chases FM pirates vigorously, mainly because
the legal FM stations pay hundreds of thousands of dollars to get on
the air and they aren't going to tolerate some twit interfering with
their investment. The ARRL seems to have some clout with the FCC as
well, which is why they hired Riley to slap a few fines around and
pacify the hammies. The legal CBers seem to have no influence with the
FCC at all, mainly because there is no organized participation (i.e,
professional lobbying, i.e, money) from the Citizen's Band.

>> The sales market of equipment used specifically for illegal CB is

>of it finds its' way to "other applications". It is not the intention
>of the manufacturers to encourage illegal uses,

HAHAHA!!! Yeah, right! More later...

> but they've gotta make
>a buck.

Exactly! They don't care what charges or fines the consumer might face if using their equipment, they don't have to pay it. The bottom line is profits. They WILL and DO encourage illegal behavior as long as it will increase the profits. That's the American way! (I meant that sarcastically, but ironically it's true for many large, "respectable" U.S. corporations.)

> And there are plenty of "golden screwdriver techs" hacking
>amateur radios, too.

Hacking them for what? Legal operation? That doesn't make sense.

>I only know one amateur who has not wide-banded his equipment. And he
>does have the information, should he need to do so. Information is not
>illegal. Wide-banded radios are not illegal. Only certain USE is
>illegal.

It is illegal to modify a CB radio if it's going to be used on the CB, and you can't use any other type of radio on the CB. Ham radio is a different story, but you already know about that, don't you?

>> Also, just listen to the CB. There is constant bleeding, intentional
>> keying on signals, people bragging about non-linear linears or export

>
>Also, just listen to 75 meters any night of the week and you'll hear
>exactly the same thing. Your point?

I will admit that 75 meters leaves a bit to be desired as a ham band, but the abuse is not nearly so bad. And consider that there are very few, if any, 75 meter operators compared to CB operators in any given square mile. Also, 75 meters covers a much larger area compared to typical range of a CB radio. So really were talking magnitudes of difference here.

>> If that isn't enough proof, then you are stupid.
>
>Proof? You still seem to think that ONLY CBers do these things.

No, I don't, and I never did. There will always be a bad element in any crowd, but CB radio seems to be the target for most of the people that choose to operate illegally. And again you are diverting attention away from the real issue of legal vs. illegal: I LIKE the Citizen's Band. What I DON'T like is the abuse -- the amps, the interference, the reference point for "freebanding", and the bad rep CB has gotten over the years because of these idiots. So don't tell ME that I'm anti-CB, because I'm not!

> I
>haven't seen any proof. Not from you, not from Jerry, not from Aaron,

>
>No. NUMERICALLY it may be higher (simply because there are many, many
>more CBers than there are licensed hams); proportionately I'm willing
>to bet it is not.

Well, it's your turn to prove your point. Otherwise I am going to
stick with my original statement that more people will drive more
recklessly when there is no speed limit, no license plates, no driver
licensing, and no cops.

> Also, how
>> many websites have you seen where hams promote the abuse of their own
>> spectrum? Not many. On the contrary, there are several sites where
>> hams encourage people to abuse the CB and "freeband".
>
>Well, SHAME on those hams for creating such a problem on CB!!

What happened to your argument? What about my statement that there are
very few hams that promote the abuse of their own bands? Or are you
just ignoring that point?

> So if you want
>> to make such a comparison, how about comparing the number of CBers
>> abusing ham bands to the number of hams abusing the CB?
>
>Given the miniscule number of hams (comparatively speaking - what,
>about 600,000, maybe?) and the vast spectrum available to them, you
>could be correct about that. But you think they don't?

I didn't say that. I know for a fact that there are many hams that
abuse the CB, AND there are many illegal CBers that abuse the ham
bands. Are you saying, because you don't hear anything on 10 meters,
that illegal CBers don't abuse the ham bands?

>> BTW, you still haven't provided your callsign...
>
>I won't, either. Not until Aanal Aaron posts his (and he'll never do

>that, will he?).

I don't know, why are you asking me? It would make better sense to ask
him, wouldn't it? And if he refuses to disclose whether or not he is a
ham, or if he says he is a ham but won't give out his callsign, why
don't you ask him why? I can tell you one thing about Voobner: if you
speak to him in a civilized manner, he will do the same. Kinda like
the golden rule, or did you forget that one?

>> >> Because I'm a CBer, I'm a legal CBer, and I'm a CBer that's concerned
>> >> about the future of CB radio. Why are YOU here?
>
>Then the best thing (and, in reality, the ONLY thing) you can do is
>operate properly and stay legal, isn't it?

No, that's not the ONLY thing I can do....

> You really think that more
>than a handful of CBers read the UseNet? What do you (or Aaron, or
>Jerry) think you are accomplishing here?

Speaking for myself, I like to expose voodoo CB techs, like Eitner,
Sean, etc.; to explain the truth about these 'linear' amplifiers and
radio modifications; to help with radio fundamentals; and to confront
the promoters of illegal operation on the CB. I think I am doing a
pretty good job so far, despite a rocky start.

> I'll tell you what: Aaron
>starts flamewars based on his wildly inaccurate mis-interpretation of
>FCC Notices and letters,

I'll tell YOU what: it takes two to tango. You can't blame just one
person for a flame war.

> and when he gets backed into a corner by
>people who are in the know, he drops that thread and starts another
>one. Jerry and Georgie-girl are plain impotent.

Well then, out of the mud you have scratched out a worthwhile hobby.

> And you aren't doing
>anything worth-while, either; you're wasting your time.

I don't think so. I have made more worthwhile contributions to this
newsgroup than you ever have, or probably ever will. True, I like a
good technical argument from time to time: sometimes I'm wrong and
sometimes I'm right. Right or wrong, the arguing is fun, and it tends
to dig up all kinds of interesting topics. But don't confuse a good
argument with a flame war, because the two don't even compare: an
argument uses logic, but a flame war is only to push people's buttons.
Pushing the buttons of keyclowns is fun too, but not my primary goal
on this group.

Now if you think I'm wasting my time, then you must be wasting your
time by reading my posts. My suggestion to you is to quit reading
them. Believe me, you won't hurt my feelings if you ignore me.

>> >I'm here to correct the misinformation Aanal Aaron puts out every day.
>>
>> Such as...? Are you here saying that CB amplifiers and freebanding are
>> legal?
>
>I'm saying that he spews misinformation, and that has been detailed in
>the thread about "Legal" eButt..." Look it up.

Do you mean statements such as this:

> The real issue is the
>> proliferation of fake 10 meter radios, export radios with no export
>> destination, and the hijacking of the name "amateur radio" used for
>> the purpose of selling illegal CB gear.
>>
>> -Aaron-
>
>There is NO SUCH thing as a "fake 10 meter radio", Aanal Aaron. A 10
>meter radio is made for use on 10 meters and is completely legal for
>use there by a licensed amateur. And you still haven't supported your
>claim that export radios have NO destination. We all know that they
>aren't legal for use here.

Well, sorry to burst your bubble, but those 'fake' 10 meter radios are
just that: They are made with the sole intention of easy (idiot-proof)
modification for operation on the CB, and marketed based on that
single feature. These radios are designed, manufactured, marketed, and
sold with the intention of being used illegally in the U.S. And if
they happen to get sold to some of the legal hams in the process, all
the better for the profit margin, with maybe a little boost in
reputation from the amateurs if the FCC should ever force the company
into a legitimate, but less profitable, market. If this 'fake' 10M
radio racket was any more obvious it would have to be included in
grade-school textbooks. If you can't see what's going on, then maybe
they -should- include it in grade-school textbooks.

<snip>

>
>Apparently that statement simply isn't true. You read Tim's post, you
>deliberately mis-interpreted Tim's post,

I did nothing of the sort. Since you can't yet understand what I
wrote, let me take this step by step so it will be REALLY SIMPLE for
you to understand:

1. I have told Timmy on many prior occasions that I am not a ham.
2. In his post, Timmy said I was a ham.
3. In his post, Timmy said I was a hypocrite for not "tirading" in ham
newsgroups.
4. I am not a ham.
5. I have no reason or right to be "tirading" in ham newsgroups.
6. I do not fit his criteria of being a hypocrite.
7. I -am- a CBer.
8. I -do- have a reason and a right to be "tirading" in CB newsgroups.
9. I -do- fit the -opposite- of his criteria for being a hypocrite.
10. Since he provided no word for the opposite of 'hypocrisy', I
picked the best word available: 'integrity'.
11. I responded.

Now I tried to make it so simple that even Twisty couln't spin the
meaning, but I'm sure both you and he will try. Regardless, is there
anything, ...ANYTHING you don't, won't or can't understand about my
response to Nebout?

> and you responded to Tim's
>post. Where is this so-called "self-control"?

The 'self-control' was in limiting myself to correcting his deliberate
misinformation. You don't like the spread of misinformation, do you?
After all, that's what you don't like about Voobner, right? So why are
you trying to chastise ME for correcting misinformation, when you
should be sniping Timmy for spreading it? Gee, that kinda fits in with
the definition of 'hypocrisy', doesn't it?

<snip>
>Who's Phil Covington? Never saw him post here.

Just wait a while, he'll be back.

<snip>

>Of course they can. It's as easy as typing an ad for legal stuff. If
>you don't like to read them, use your filters and don't look at them.

>Funny how everyone else can filter and use kill-files but you don't.

There is a distinction between legal and illegal behavior, or can't
you make that distinction? Just -advertising- an RF amplifier capable
of operating on the CB is a federal offense.

***Hey Voob, someone needs a refresher on the subject!

>And I highly doubt Aanal Aaron can provide anyone with "proper
>information". He never has and he most likely never will. He might
>provide HIS take on something, but it won't be the truth.

The Code of Federal Regulations isn't the truth? Well, maybe you can
point out a few of it's lies.

>> You are totally ignoring the purpose of discouraging illegal behavior.
>> By your "logic", if you don't like thieves stealing your tools from
>> your garage then you should just ignore them. That's a pretty good
>> plan as far as the thieves are concerned, huh? You wouldn't happen to
>> be one of those 'thieves', now would you?
>
>No, if I don't like thieves stealing tools from my garage, I bring my
>tools inside where I can protect them; I don't leave them where
>someone might take them. I don't go out with a scattergun and shoot
>everybody for blocks.

Twisty does.

> And I certainly don't go into their houses,
>which is an approximation of what the "alleged amateurs" are doing in
>this newsgroup.

That's total bullshit, this isn't YOUR HOUSE! This is a newsgroup. YOU
make the decision to bring ANYTHING from the internet into your house.
Like I have said many times before, nobody is forcing you to read the
newsgroup. Don't blame anyone but yourself for getting worked up over
whatever YOU choose to read!

>And "discouraging illegal behavior" makes you a dork in the eyes of
>anyone who does such things and has no effect on their behavior
>whatsoever, does it. And it makes you a "goodie two-shoes" to most
>anyone else. It's not your problem (you said you run legal on CB),
>right? Why does it matter to you what other people do? If you're not a
>ham, why should it bother you that the occasional trucker (or
>whatever) mistakenly uses a quiet frequency within the edges of an
>amateur band?

I don't really care about 10 meter incursions, my focus on this
newsgroup is, and has always been, primarily with the Citizen's Band.
And guess what? I really don't care if illegal operators consider me a
"dork" or a "goodie two-shoes". It's better than being a lemming,
bending to peer pressure and following the herd like a cow.

And you know what else? Personally I really don't care if anyone wants
to break the law. That's up to them. But in the process they screw
things up for other people, which is why we have laws in the first
place. For some reason (actually, many reasons that I have already
explained), the CB seems to be a haven for deliberate lawbreaking,
with the result of the trashing of the band. I don't care about the
lawbreaking, but I do care about the band. So unless you come up with
a solution for how these troglodytes can get their kicks breaking the
law while not screwing things up for everyone else, I'm all ears.
Otherwise, I guess I'll just have to live with the tag of "goodie
two-shoes". And I will wear it with pride AND integrity, which is
something that you can't do (or will probably ever understand).

<snip>
>> Actually, I have mentioned several times that hams should take there
>> ham discussions elsewhere. In fact, since illegal operation is closer

>> go there as well.
>
>Oh boy, the "illegals" are much closer to CBers than amateurs. CBers
>don't have licenses; illegals certainly do not have licenses. Amateurs
>are supposed to have licenses. Where's the commonality?

Legal CBers and legal hams have the commonality of legal operation.
But that's where it ends: Illegal operators use high power, as do
hams; illegal operators use modes other than AM and SSB, as do hams;
illegal operators use frequencies beyond channel assignments, as do
hams; illegal operators use modified gear, as do hams; illegal
operators intentionally work DX, as do hams; etc. In fact, the only
differences between illegal operators and hams is the license and a
couple of the limitations. Oh, and illegal operators do not have the
policies of "good engineering practice" or "self-policing". So maybe
you are right, maybe they are not THAT much like hams, but they are
certainly more like hams than CBers.

>> But I responded to Timmy's post because he grouped me in with other

...uh, are you lysdexic or something? Since you snipped it, let me
post it again:

>...i dont see jerry, aaron, frank or
>anybody else tirading about the amatuer bands and on there newsgroups
>complaining and these problems are even more directly related to the service
>there fighting for.

Well, if I'm not a ham, and my posts haven't been defending the ham
bands, why does he think that I'm "fighting for" the ham bands? I
think you have a problem with reading comprehension. Either that or

you are just too stupid to understand what was written. Maybe you
should also refer back to several posts where Timmy refers to me as
N7VCF, a ham on the other side of the state with the same name as
mine. Twisty made the suggestion, and Timmy was gullible enough to
believe it. So now you have TWO more people you can chastise for
giving out misinformation. Get busy...

>> >I'm in here because I'm a CBer. I am not a ham (yet), and that's

>
>I am offended by Aanal Aaron's deliberate mis-information, and I am
>somewhat offended by Georgie-girl's lame attempt to provoke people
>with sexual innuendo (and that's all he ever posts, you notice).

Not quite. He seems to know quite a bit about microwaves, a subject
that I avoid more than lima beans.

> But
>precisely WHAT is all this accomplishing? It only makes them look like
>idiots.

Now isn't that their choice if they want to look like idiots? And if
that's what they choose to do, and that's what they are accomplishing,
then why does it bother you? I mean, why would you complain when
someone that you don't like succeeds in making an idiot out of
himself? Or is it that you are trying to convince yourself that they
look like idiots so you don't feel like one for complaining about
them? Hmmm, I think that's closer to the truth, don't you?

<snip>
>> Now THOSE people I can live without. Care to point them out?
>
>Same names: Jerry Ox, JJ, Georgie-girl, etc., etc., etc., ad
>infinitum.

I haven't seen a post by Jerry, JJ, or George that is anti-CB, except
for the reason that the CB seems to be IO-central. I have never seen
any of them have a problem with legal CBers. But there are a few
extremists that don't like -anything- legal, such as Timmy, Train, or
that dictatorial, genocidal, racist, Bible-thumping hypocrite of a
hermaphrodite called either Dave or Debby.

<snip>
>> > it's with alleged hams
>> >who never seem to operate on the ham bands because they're always
>> >slumming in a CB newsgroup. Get the picture?
>>
>> I get the picture very clearly.
<snip>
>I'd say you're pretty busy. But then, you've also said you're not
>(yet) a ham, so my statement was not directed to you.

I would say that YOU are starting to get the picture. Maybe you can
pass it along to Timmy, who still thinks I'm N7VCF.

>> I am also working on getting my ham license. There sure are a lot of
>> things about propogation that I have forgotten since college, I'll
>> tell you that much. Not only that, but I picked up my first two ham
>> radios in the past month: One is a Heathkit HW-19 (ok, it a CAP radio,
>> but with a VFO it should work just fine for ham); and I found a Swan
>> 500 in really great shape (and for an even better price).

>
>A couple of real boatanchors there! Good luck with the Swan. They're
>one strange radio, in general.

I used to think so, but learned different after I picked this up. This is really one fine rig, and made before Swan's fatal affiliation with Sillytronix. It does have a problem, though. For some reason they put the ANL circuit between the product detector and the first audio amp, i.e, right between the two triodes of an unshielded 12AX7. Not a good idea. The result is that, after time wears down the components a bit, the audio oscillates through the AGC, which then needs to be disabled, and which also disables the S-meter. Great for CW, but bad for the ears. I noticed that on the later version of the 500C they moved the whole ANL circuit to a point after the AGC amp, the grid resistor of which was changed to a lower value. I did the same modification and that solved the problem.

But while this radio can do 200 watts CW and 500+ PEP on SSB, it can also do QRP CW (with break-in keying) simply by keying through the mic jack and turning the carrier balance off-center. And since it will load into 15 to 500 ohms, you can use almost anything for an antenna. With a sensitivity of 0.5 uV on the receiver and 500+ PEP, you don't need much of an antenna anyway.

And no PC boards -- it's all point-to-point wiring!

So I don't know why anyone would call it a "strange" radio, it seems like a fine radio to me.

>> But YOU spend your time talking on the CB, chasing Voobner on the
>> newsgroups, and scanning 10M looking for illegal operators just to

>
>Wrong again. I don't talk on CB anymore (although I used to). I don't
>bother "chasing Voobner" - he posts enough right here to keep my
>fingers sore.

Well, everyone needs a hobby. Have you tried bowling? It might be more fun. Or maybe amateur radio? Hey, now THERE'S a novel idea, huh?

> And I am taking JJ's advice looking for those
>"intruders" he claims are in the bottom end of 10 meters (and I have
>not heard yet). Actually, I'm trying to confirm his statements; I just
>haven't been able to. That's not pathetic, that's "active".

That's not active, that's sedentary. Go get some fresh air. Fly a kite or something. You know, it's been years since I have seen a kid, or anyone for that fact, fly a kite in this town. Has the activity of kite-flying been flushed by the Nintendos and X-box's? Maybe those games will let you 'virtually' fly a kite, although I tend to prefer the real thing. Ya know what? I got tomorrow off, I'm going to build a kite and fly it (if the wind cooperates)! I challenge you to do the same.

>> Seriously, what is it that they say that bothers you so much? Are you
>> an illegal operator that can't stand people telling you that what you
>> are doing is illegal? Or if someone says something bad about CB radio,
>> do you actually take it personally? I get the picture VERY clearly.
>> Get a life. And this time when I say "get a life" I really mean it.
>
>IF I was an "illegal" operator, I wouldn't care what they said. The
>fact is that it offends me to see those low-lifes rain on everybody's
>parade, just because they're anally-retentive. Hell, if they said it
>once and moved on it wouldn't bother me at all. But Aanal Aaron has
>been corrected so many times that it's absurd, and he STILL doesn't
>acknowledge that he doesn't have a clue what is reality.

Well, reality is relative. My most sincere suggestion is to step away
from the newsgroup for a while. Things won't fall apart while you are
gone.

<snip>
>> Tell you what: You go ahead and believe what you want. Post whatever
>> misinformed, deconstructive, and obviously subversive anti-ham
>> propaganda you want. But next time you want to reply to one of my
>> posts that has nothing to do with you, try to understand it first.
>> Then try not to jump to the conclusion that I am speaking on behalf of
>> any of those "alleged amateurs" or "BOZOs", or whatever you choose to
>> call them depending on your mood.
>
>If you're not speaking on their behalf, then why did you post at all?

I thought I made that clear last time, but if you need more
clarification than what I have outlined above, then you need to seek
professional help.

>You certainly were being defensive. Oh, I forgot: Like Aanal Aaron,
>you just have to prove that you're right. Maybe you ARE Aanal Aaron??

...oh brother, here we go again!

>And just where (and how) did you come up with this "obviously
>subversive anti-ham propoganda"?? What a diaper-load!

It's all you complain about. "Hammies do this" and "hammies do that"
and none of them live up to your standards. It's never about the real
issue, which is illegal operation. Your obsession is with hams.

>> Now if any part of this post was beyond your ability to understand it,
>> I'm sure you will reply. But don't get discouraged, you aren't doing
>> too bad for a fifth- or sixth-grader.
>
>Ohhhhhh, a PUT DOWN. I'm crushed! Now take your own advice and be sure
>you understand my posting before you bother to reply.

I did understand it. Now maybe you can try and understand my original
response to Timmy for the meaning that was intended (and carefully
outlined above), not for some distorted meaning that fits with your

distorted perceptions.

>Frank, that was only "One" website of thousands, so
>a lot more than just a "couple hundred stations "

I can't even get close to that many hits. What search engine did you
use, and what was your search criteria? And disregarding that some of
those listed were in other countries, do you really think there are
more than a couple hundred pirate FM stations in the US? If you do, is
that based on the number of hits from your search?

Even better, try and make a list of FM pirate amp and transmitter
manufacturers, then compare it to a list of CB amp and "import"
manufacturers. Which list do you think is going to be bigger?

> Hell in High school I knew five guys that competed
>against each other with 'Pirate" fm stations. that was a
>small town of only 5 thousand people.

We don't even have one pirate station here, I don't think we have ever
had one. And this is a metro area of about 300,000 people. Where did
you go to High School?

<snip>
>> Really? I thought they were using kits, like those Berkeley

Just for technical reasons, I would like to see what he did to get his narrowband FM ham gear to go wideband more than 30 MHz from any ham band.

>Now I'm not claiming that all hams do this, but neither do
>the vast majority of cb'rs do illegal things too.

I think that very few hams do this. And I think most of the RF piracy is caused by people that are either too lazy or too paranoid to do it the legal way, whether they are licensed for another band or not.

<snip>
>> Then you don't listen to the "superbowl" much. I can't blame you

>big watts died down, but again not much.

Well, there's almost no skip on 10M anymore, and the local "superbowl" channel (around here it's channel 1) is picking up the slack. So is channel 2, 3, 4, 5, ... etc. A few of the local boxes will splatter all the way to 40. Happens every day around here. Doesn't happen on the FM band.

>> >>And just about every night there is some moron that just

No, I don't. Personally I find most of it offensive. That's why I don't read it. Although Voobner's brain-damaged ass spoof was hilarious!

> So
>when someone says they are kill filling people, others
>change their nics to by pass it, just like following someone
>to another channel and harassing them there, right?

I have done it a couple times. So have you. What's your point? Nobody is being harassed unless you keep it up. Regardless, you don't -need-

to advertise that you have someone in your killfile, especially when everyone knows how to get past them. Wanna know a little secret? If you look at my headers you will see that I use Free Agent -- that software has no killfile. My killfile is in my head. It's real simple to use: whenever I see a post written by twistedhed, I just delete it. It's really simple. But maybe you feel like you are getting snookered whenever you read a post by a name you have never seen and find out it's just George. If that gets your panty-hose in a bunch then try reading the title of the post, too, since it might give you a clue as to it's content. And if there is a thread that is nothing but arguing, hit 'ignore thread' so you won't get anymore posts there.

This stuff is too simple, shark. I don't see any reason why anyone has any right to complain because the space here (unlike the RF spectrum) is practically unlimited; that is, unless someone is forced to read each and every post at gunpoint or something like that. Maybe it's those darn Artesians that take control of your mind and make you read things that irritate you. I don't know. But it's your problem, so quit trying to blame it on someone else.

> My point Frank, is human behavior, to which you hit
>on several times. The problem isn't illegal amps, radio's,
>it's human behavior. Look at a few of the people that
>troll this group, do you think they talk like that on
>the ham bands? Of course not, same could be said for
>some of the people that are just cb'rs.

Listen to the CB band. Do you think they talk like that on the ham bands? Well, maybe a few of them do, but for the most part the ham bands are reasonably civilized. Which is several steps up from the current state of CB radio.

Now my question is, why would anyone complain about me trying to make the Citizen's Band a better place? And if that's what I want to do, why shouldn't I include rec.radio.cb in my effort?

Naw, I don't think so. I would rather keep my integrity and continue
to operate legally. And I'll do the same when I get my ham license.
Come to think of it, you're a ham, aren't you?

6139. Re: Riley's Latest Warning to a Trucking Company!!!

If the truth be known the reason for the OO progam if you want to call it a program is that the Fcc is so understaffed because of cutbacks in recent years.They do not have time ofr manpower to be chasing illegal cb operator and dont bother to do so except in cases that get multiple complaints due to harassment,vulgarity or interference with other services and I repeat "multiple complaints" and if they happen to be in the area doing commercial freq./power checks etc then they "might look into it.
Also this is the reason for the Fcc granting certain enforcement powers to local law enforcement agencies.Most of the time the locals will not bother as far as power issues etc because there have been too many court cases tried and won on the basis that they do not know the rules and do not have the proper equitment nor the training to operate it if they had it..Rarely will they try to enforce anything because sitting outside a house with a cb in a cop car and having the meter pegged while some jerk is spewing obcenities is not certified equiptment and a lot of cases have been lost because of this.Recent cases concerning certain CB operators in Phoenix AZ bears this out.5 operators...29 violations 1 lawyer,1 day ...all dismissed.
I take no side here just stateing the facts maam,just the facts

Too bad a whole bunch of truck stops that sell "phoney 10 meter
radios" are on Riley's hit list. I don't know if any are in VA Beach
area but you may want to drive out to them and personally explain to
Riley why they must remain on sale since they are legal for a ham like
you to use :)

Thanks for the advice. I had a hunch that anyone with such an abrasive
personality would have made LOTS of enemies on Usenet. So I invested
30 minutes of search time. Bingo. I was right. A little poking around
in the pirate radio newsgroups and I'd located the embers of a flame
war that "Richard" ignited (one of many). This particular conflict had
resulted in one of his "pirate radio friendships" with another troll
going sour. The troll conveniently ID'd him.

From: jamey clark (jameyboy@juno.com)
Subject: The Big V followed me! Some of you may be infected by this
"troll"
Newsgroups: alt.religion.w-w-church-god
Date: 2002-03-07 10:24:48 PST

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the

operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

QRZ LISTING:

The same can be said for CB radios. Yet someone, probably a Ham, was bitching about CB radio being "stuck in the 60's" (or approximately the same thing).

So, why is such a situation good for Ham radio, but not for CB?

Actually, it is both. There are Hams that intentionally try to cause
havoc - both here and on 11 Meters (and in the freeband). There are
also CBers that intentionally cause trouble by operating on 10 Meters.
There are Ham that intentionally cause as much havoc as possible on
the Ham bands and there are CBers that cause as much havoc on the CB
band as possible.

All this shows is that there are troublemakers in both groups.

>>It isn't and it doesn't. Since most of the QRM in the newsgroup comes

> a newsgroup.

You mean, like your above?

And what does all this stirring of the mud puddle, by either group,
accomplish? Certainly nothing useful. No one is going to convince
the other side that they are wrong.

And all the flames do is make the other person even more certain that
everyone with a different view is just a troublemaker.

"Horace T Einsworth" wrote ...

"I saw you at the last Hamfest I went to. Your belly hung down over your belt buckle, completely covering it. you hadn't shaved in days. your glasses were like the bottom of Coke bottles and you stunk from not having bathed in days. Most prominet though, you had your ham call letters on your hat, shirt, name tag, six places on your vehicle, and you were handing out qsl cards even to people who didn't want them. Then you waddled over to the snack bar for the fifth time in the last three hours, where you stuffed greasy nachos down your mouth, while cheese dribbled all over your filthy shirt. Yup, definitely saw you at that Hamfest, a "typical" attendee at any hamfest you go to these days!!!!"

I was also at that Hamfest. You might have seen me there. I'm a 45 year old Extra and I don't have a fat belly (as a matter of fact, I have a very flat one) I guess that's because I play tennis and golf (to an 8 handicap). I try to stay away from fast food as much as possible, but I do enjoy the occasional chili-dog or hamburger and fries. I usually where a hat, but it doesn't have my callsign on it , it says Titleist. Clothing?, usually slacks and a nice Greg Norman golf shirt with Bass or Rockports. (which probably cost more than your entire wardrobe) But don't despair, maybe one day, you too can be a typical Ham. You see, good Ham equipment (like a good set of clubs) isn't cheap. (like you) I would say that the average Ham has thousands of dollars worth of equipment in their shack (even if they built most of it) To say nothing of the time and money spent learning their skills. Most of the Hams that I know take great pride in their personal appearance. This includes their home, vehicle, and station. Unfortunately, I can't say the same for most of the CBrs I've seen. (like you) I know, the truth hurts. But in the end, the truth always seems to come out. BTW, didn't I see you behind him in that snack line?

For what reason? Sure, there is always a few morons that try to muck
things up just for kicks, and CB is full of them even without the
hams. But why do you think hams and CBers are deliberately messing
with each other? Is this widespread? And are you suggesting that there
is no problem between legal and illegal operators, or that it's
insignificant?

>All this shows is that there are troublemakers in both groups.

I can't dispute that.

Not quite. I don't type away until my fingers hurt.

>And what does all this stirring of the mud puddle, by either group,
>accomplish? Certainly nothing useful. No one is going to convince
>the other side that they are wrong.

Oh well, then we might as well just hang it up then. And we should
just forget about any other disagreements in the future, because no
matter what happens we will always disagree. Right? Wrong. When people
have disagreements over money, real estate, or other property, they
usually take their arguments before a judge who will make a decision.
Ok? Now anyone reading the argument is the judge. The only difference
is that there is no final verdict. While neither will ever convince
the other side that they are wrong, one side will certainly convince
the jury of readers.

>And all the flames do is make the other person even more certain that
>everyone with a different view is just a troublemaker.

Good point. I agree completely.

In a way, it is. You haven't posted one shred of truth, nor answered
any questions since you started posting here. And many people have
asked, not just me. You have established zero credibility. The only
people asking me anything are you and your puppets, who also have zero
credibility.

this is a schoolyard game: you want to

It is; have you listened? You paint a picture of pure and pristine amateur operators, but all CBers are "criminals". Horse hockey, to quote Col. Potter of M*A*S*H fame. You got your one-way glasses on again. One or two frequencies? I said the 75 meter phone band. Can't you read, either? It's obvious you can't think.

> What a laugh! Tune across the ham bands and 99.9% of the operation

> and all you hear are modded overdriven splatter boxes operated by
> a bunch of morons.

If you bother to listen to CB you'll hear 99.9% of the people having nice conversations. And maybe a disgruntled hambo in there trying to cause trouble.

Why aren't you on one of the precious amateur bands "protecting" it from those nasty alleged intruders?

Are you trying to tell me that the MUF is BETWEEN 10 and 11 meters?
I'm not buying that. CBers are still using 11 meters because it's all
they have; hams are not using 10 meters because they think it's dead.

And the ARRL can claim less than 25% of licensed US hams as members.
They are nothing but a Corporate lobbying group; they do not represent
what is best for amateur radio, they do not represent you or me. They
may have clout but only because they have $$.

Possibly, knowing how human nature works. But there were few accidents
in Montana when the speed limit was "Reasonable and Proper"; the
drivers knew that they were responsible for themselves and they drove
in a such way that they got where they were going. If they had an
accident, it was their own fault; they weren't driving at a
"reasonable" speed or they didn't drive "proper". Thus, they killed
themselves or, if they survived, they were cited. A very good way to
do things, IMHO.

You miss my point, too: Why are those licensed hams advocating illegal
activity on CB? Would you encourage people to mess up your own band?

All I've said is that I haven't heard any - yet. I daresay that any
you hear up there are truckers with "export" radios that don't have
frequency readout, and they have no idea what frequency they might be
on at the time. I think the hams should be spending more time
"policing" the precious band(s) and less time posting absolute bovine
excrement in a CB newsgroup.

Bull. Many people have asked him and he refuses to answer any
question. From what I read, Tom Severt tried asking him in a "civil
manner", and got the usual side-stepping obstrufication and the same
lame URL to a phoney website. We all know he'll never post his
callsign.

What I mean has been detailed in that other thread: ALL 10 meter
radios are (somehow) "illegal" even for licensed amateurs to use,
etc., etc. He simply hasn't a clue.

> Well, sorry to burst your bubble, but those 'fake' 10 meter radios are

You are again confusing "export CBs" with legitimate 10-meter radios.
Export CBs have never been legal in the US; 10-meter radios are legal
for licensed amateurs to use. The fact that a few chop-shops have
figured out how to modify a radio for illegal use is unfortunate, but

it's always been that way and you (even Aanal Aaron and JJ and
Georgie-girl) aren't likely to have any impact on it. The FCC "busts"
a couple of those shops every once in a while, and more pop up to take
their place. The best way for the hams to defend their turf is by
USING it and, maybe, running the "intruders" out.

I haven't seen any mis-information from Tim so far.

> <snip>
> >Who's Phil Covington? Never saw him post here.

Nonsense; amps are permitted for ten and twelve meters. You really
mean: "Just -advertising- a RF amplifier in rec.radio.cb..." maybe?
Geez, I think it makes perfect sense considering how many allaged hams
lurk here. Maybe they would like to buy them?

> >And I highly doubt Aanal Aaron can provide anyone with "proper
> >information". He never has and he most likely never will. He might

I have pointed out many of his mis-interpretations of the R&R. As I
said, he presents his distorted version of the Rules, not the truth.
Try reading his crap sometime.

Great description! I have no problem with legal operation, but I see
no valid problem with illegal operation, either. Neither is cause to
paint all CBers as "criminals", as one of the aforenamed persons did.

> <snip>
> >> > it's with alleged hams

Doggone - something my tired eyes could actually work on!

> So I don't know why anyone would call it a "strange" radio, it seems
> like a fine radio to me.

I seem to recall that Swan used some trick circuits or gimicks to
compact those things into the (relatively) small cases (for the day).
I haven't seen one for a good many years, so I could be wrong. Maybe
that was later, under SilTronics?

> >> But YOU spend your time talking on the CB, chasing Voobner on the

Used to bowl, even played table-tennis for a while and got decent at
it. To be honest, I don't talk much on the ham radio, either; I've
always been more of a listener than a rag-chewer.

> > And I am taking JJ's advice looking for those

I see (rather, don't see) the same thing; and I think it does have
something to do with the Xbox or Nintendo. I see a great many yards
decorated with pools and trampolenes and swings, and never see anyone
outside using the things. This place seems evacuated weekends and
during the summer. But I do get plenty of fresh air; I walk around a
lot and have two large yards to keep up (or down, whichever). Sorry,
not a breath of breeze today, so no kite.

I will have to go back to the beginning, I'm afraid; I'm not certain
Tim's post was directed to you in the first place. If it was, then
perhaps I'm outta line.

Good luck with the licensing and enjoy the Swan!

6173. Set of Realistic TRC-218 Handheld CBs

Newsgroup: rec.radio.cb
Date: 2002-08-31 13:31:48 UTC
From: Power House <Power_House@PrivateBox.com>
Message-ID: <un1hdnm458bpaa@corp.supernews.com>
Source record: 135252
Cross-posted to: rec.radio.cb,rec.radio.swap

I have a set of Realistic TRC-218 Handheld CB radios for sale. Both units are in near mint condition, and hardly show any signs of use. One unit is by itself, however the second unit comes complete with it's original box, owners manual, FCC Rules sheet, as well as two dummy batteries.

These are 3-channel crystal controlled units, and each radio comes with a set of crystals for channel 14. These units have the metal collapsible antennas (not cheapy rubber stubbies), that when fully extended are 3'1" (37") long. The antennas on each are in perfect shape, not even the slightest bend in either of them

These would be perfect units for the collector of older CB gear, as they are in immaculate condition, as well as the one unit being complete. How often do you see a handheld unit that comes with it's original dummy batteries?

The radios are fully tested and function perfectly. I'm asking $20 for the set.

A picture of the units can be seen here:
http://www.geocities.com/femaster1/radios.JPG

Nah, gave that up years ago. Life is much better now.

You on the other hand, seem to still have a "problem".

I went back and looked, and I was correct: You unnecessarily responded
to a post that was not addressed or directed to you

Tim Nebo never said YOU were a ham, nor that YOU were a hypocrite. His
post was a response to the late Richard McCollum, N0BK, and you jumped
in for no reason.

"Integrity"? I think not. The word bullcrap seems to fit better here.

Source record: 135261

Florida Citizens Band enthusiast William "Rabbit Ears" Flippo will spend a total of 15 months in federal prison--including two months already served--and pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license. He'll also spend a year on supervised probation following his release, during which he cannot own radio gear or firearms. Flippo was convicted in federal court earlier this year on eight misdemeanor counts. The sentence is believed to be a record for convictions of this type.

"It's sent a shock wave across the Amateur Radio and CB communities in South Florida," said Ed Petzolt, K1LNC, who was among the amateurs targeted by Flippo and who testified at his trial. "The CB guys are running for cover. You can buy an illegal CB amplifier pretty cheap right now," he quipped. Hams were surprised by the severity of the sentence.

Federal District Court Judge Daniel T.K. Hurley imposed the sentence August 29 on Flippo, of Jupiter. He had been found guilty June 19 of four counts of operating without a license and four counts of deliberate and malicious interference. Flippo has remained in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing. The judge also said he wants a full financial disclosure from Flippo, who may face other legal actions unrelated to his radio operation convictions.

At the sentencing, Flippo reportedly wept, said he'd turned over a new leaf and claimed he was sole support for his wife and two daughters. None of his family members was in the courtroom for the sentencing, however.

The judge was not persuaded, telling Flippo, 60, that he was old enough to have considered the consequences of his actions.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

6190. Dumb CBers

Finally Cbers are waking up to the fact that they can no longer use import radios and amplifiers with impunity (without getting spanked). The Federal government is gearing up to start coming down on hard on these dumb ass scofflaws who think they they can spread their idiocy beyond the bars of the monkey cage (26.965~27.405 with a 150 mile limit). We tried to tell them time and time again that the Feds were gonna get 'em. Old

One major error in reporting:

Since he didn't hold any FCC license, he was not required to allow the FCC to inspect his equipment. Only licensed operators are required to do that. And don't feed me any crap about a so-called "blanket license"; there is no such thing.

He got exactly what he deserved, although I hardly think it was necessary to humiliate him with shackles. It's not like he was a violent thug or a rapist.

DickHead you are so very wrong :

[Code of Federal Regulations]
[Title 47, Volume 5, Parts 80 to End]
[Revised as of October 1, 2000]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.426]

[Page 540]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart D--Citizens Band (CB) Radio Service

Sec. 95.426 (CB Rule 26) Do I have to make my CB station available for
inspection?

(a) If an authorized FCC representative requests to inspect your CB
station, you must make your CB station and records available for
inspection.
(b) A CB station includes all of the radio equipment you use.

> He got exactly what he deserved, although I hardly think it was
> necessary to humiliate him with shackles. It's not like he was a

> violent thug or a rapist.

Neither is someone who gets arrested for drunk driving but they usually handcuff them too, this guy is a FEDERAL Criminal like so many that grace this NG

Can I prove that there are "many" truckers in here sure a simple poll or a
look at the archives from this NG go to google.Can you prove there are 30-40
millions cbers in this country. In fact I can use your analogy, prove that
there arent. Can you prove there are more hams than truckers in here? Prove
that statement.

The Federal government is gearing up to start coming down on hard on these dumb ass scofflaws who think they they can spread their idiocy beyond the bars of the monkey cage (26.965~27.405 with a 150 mile limit). We tried to tell them time and time again that the Feds were gonna get 'em. Old

Hey George, Sparky, Aaron, Leland, Mark, Dave, Jerry, or whoever you are today:
I was on 36, 37, 38, and 39 this morning, talking DX all the way to San Francisco.
This was with a PC-122 (Unmodified, recently aligned by an FCC licensed tech),
a stock mike and a Texas Star DX-250 into a Firestik KW-7 on the back bumper.

When will you stop me? Come, take my 'Star. I'm still waiting.

> ---
> This post was anonymized at http://www.xganon.com...

What's even more effective than a letter from Hollingsworth to get freebanders out of the 10 meter ham band is a real strong RTTY signal on top of voice transmissions. Last fall I heard someone (maybe a ham, maybe not) sending RTTY over the top of two truckers talking on 28.085. The RTTY signal was between 10 and 20 db over S9 at my location, and boy, were those truckers howling about the interference! A similar situation occurred a few days ago when I heard an over the horizon radar system (?) wiping out a group of freebanders on 27.445 LSB. Very effective, and funny as hell to listen to also.

73,
David

There may be. I haven't heard any yet. And we've never had a
conversation, Aanal Aaron, since you never answer any questions.

> > Nobody said "a 4 watt signal...", but
> >it's quite possible when propogation is rolling.

When the skip (DX) is rolling, a lot of distant signals are louder
than local signals. Your point?

And nobody said
> there
> >were MORE "bad" hams; in fact, I claim it is more-or-less

I think Twistedhed can answer for himself. And I'd like it if YOU
would answer for yourself. Just once.

> >I guess when you have no case you just have to make things up.

Got news for ya. I still haven't heard anything at the low end of 10 meters. Not even a ham. Doesn't make it unreal to me. And you listen on..?

> A bit of honest advice. Your laughable attempts to discredit people

> -Aaron-

HAR de HAR. YOU are the one who is desperate and panicked. You have no clue. You keep posting mis-interpreted letters and injecting your own biased spin. And when you are corrected you run away and start a new thread, and never acknowledge your mistake(s).

I don't have to try to discredit you; you do a great job of it yourself!

Try: F. There's nobody there.

Heard someone on 27.375 this afternoon talking from Arizona to
Ontario. STILL not a peep on 28.085. Nuttin. Zip. So where are all
these "intruders" you keep whining about?

So, who says you have to respond to every post you don't like? If
@$$#ole$ like you would stop making dumb posts, the entire message
count on the group would go down. Nobody cares what you think, so you
spend even more time posting, and most of your posts contain nothing
but insults and sexual innuendo.

What, you can't use a search engine? You'll just have to try harder.
It works for Aanal Aaron, it'll work for me. You're just lame,
Georgie-girl.

, 30-40 million Cbers proof

You haven't disproven it.

, where I
> cried about truckers, and lets see I know there is more ... Oh well I don't
> ever expect to get any real answers from you anyhow you'll just duck em like
> usual.

Really? Daily? How come you haven't run all those no-good truckers out
yet?

You'll have to wait until Aanal Aaron posts his callsign before I'll
consider posting mine. And he'll never post one.

Good question Bill, a lot of the newer equipment doesn't operate
any better than the old stuff, it just has more bells and whistles
that do not add anything to being able to communicate. Mostly just
stuff to brag about.

Dickey Craniumless continues to show his complete lack of
knowledge of anything technical. 1 Mhz can make the difference in
the MUF (max usable frequency) I have seen many times when the
upper portion of 10 meter would be dead, yet still plenty of
activity on the lower portion. He keeps bragging about 11 being
open all the time and the poor hams can't operate 10 because it is
dead, just wait, as the solar cycle winds down 11 will go also and
the hams just move down to 15 or 20 and keep working the DX while
the cbers are shouting across town with their "lenars".

The MUF can be anywhere. Like I stated in another post I have seen
the bottom of 10 meters open and the top end dead.

> Possibly, knowing how human nature works. But there were few accidents
> in Montana when the speed limit was "Reasonable and Proper"; the

> do things, IMHO.

Ah, so now we see that Dickieboy is one of these who believe there
should be no laws or rules and just depend on everyone to do what
is right. So we element the speed limits and Dickieboy is driving
along at a reasonable speed, then here comes some nut driving too
fast because there are no speed limits. This nut rounds a corner,
slides sideways because he is going to fast and slams into
Dickieboy and Dickie winds up in the hospital with a broken neck,
the nut walks away with hardly a scratch. Now listen to Dickieboy
scream about how there should be a law against driving to fast.
You see Dickie, when someone has an accident that was "their own
fault" because they "didn't drive proper", they may not only kill
themselves but also someone else who was "driving proper".

Your obviously do not know how to read your receive frequency, (or
maybe your receiver is stuck on one frequency and you don't
realize it. THAT'S IT!! no wonder you don't hear any truckers on
10 meters!!) The entire 75 meter band is not taken up with bad
operators. There are a few frequencies where there are a bunch of
idiots, but most of the band like the other bands, is filled with
hams just having reasonable communications.
And again you show you total lack of understanding. I have said
many times I have no complaint with those who operate legally,
just the ones who do operate illegally and only with those who
encroach into the ham bands.
Now, do I need to repeat that, or can you read it several times
until it soaks in?

> > What a laugh! Tune across the ham bands and 99.9% of the operation

> cause trouble.

And just how do you know the person in there "trying to cause
trouble" is a ham? Does he give his ham call? Or do you just
assume it is a ham and "paint all hams as criminals"?
>
> Why aren't you on one of the precious amateur bands "protecting" it
> from those nasty alleged intruders?\

Believe me, when I hear these intruders, and they are not alleged
by the way, they are there even though you and your equipment are
not capable of hearing them, I do make every effort to discourage
their illegal operation on the ham bands.

You must be mistaken David, Dickieboy Craniumless says you can't
hear any truckers on 10 meters. Guess they are using stealth
radios.

Well Dickieboy, the Collins probably has better intermod and image
specs than anything you have every owned. As I said, try getting a
receiver that works on 10 meters.

Steve, I just thought of something: if you are using the same antenna
you use with your pirate SW transmitting station, the problem might be
that it's resonant for 6.955 mHz and not 28 mHz.

richcranus@yahoo.com (Richard Cranium) wrote:

>In a way, it is. You haven't posted one shred of truth,

That's quite a sweeping generalization, Steve. I have posted items
from Part 95 here quite a lot, and I posted 'em not to mislead, but to
provide facts. Are you saying Part 95 is not true? Not one shred of
it? Wow, the FCC is going to be upset. Maybe you should do a rant on
"Radio Free Speech" about it.....

>nor answered
>any questions since you started posting here.

I'll answer questions posed to me within a non-troll context. So far I
have seen none originating from you, Steven. Anyone can tell the
difference between a question asked to clarify a point in a civil
discussion, and one intended to "flame" or "troll". Your questions
fall into the latter category, hence they go unanswered and ignored,
sorta like DaveorDebby.

> And many people have
>asked, not just me. You have established zero credibility. The only
>people asking me anything are you and your puppets, who
>also have zero
>credibility.

Glad you see "credibility" as a big issue in this newsgroup. As a pirate radio operator and active Usenet troll -- how much credibility would you estimate you possess? Wait, don't answer that, I'm still laughing too hard. So when is the next "Radio Free Speech" broadcast?

-Aaron-

Didn't realize you're using a handheld. You might want to get a
telescoping antenna and try transmitting outside. The rubber duck that
comes with handhelds is usually not good for more than a mile or so,
if that far.

I keep tellin ya, get a receiver that works on 10 and then learn
how to use it. I am hearing some cw on the lower end of 10 right
now. Not strong, but it's there and very weak heterodynes on
28.085 which is the trucker channel which means they are they just
too weak to hear any audio.

Yes, those were "heated" discussions that were good. It's too bad those you
mentioned were disenchanted by the majority of troublemakers here. We also
just lost another good one... Richard.
I'd even take "painkiller" over most of these guys...

Don't laugh!. Many of the commercial dealers had printed info
sheets on how to "open up" commonly sold Kenwood, ICOM,
Yaesu, etc. equipment. Of course, it was not sitting on the table in
the open, but all you had to do was ask. I asked one dealer for
an info sheet, telling him I was buying the ham gear to convert to
business band use. Sure enough, he handed me a bundle of info.
Then, I asked if this was legal, and the guy says oh yeah, the FCC
deregulated everything years ago, you don't even need a license
anymore! And this came from a commercial dealer. Anythng to
make money I guess. Also saw a lot of truck drivers buying
marine radio equipment. Geeeeee, what a radio bazaar, wonder
where all the hams were?

Oh, so everybody but YOU is a "bunch of morons"? I notice how much
information you post here. If you're so damned smart, why aren't you
giving GOOD info? Instead of bullshit snipes?

So do it.

Can you prove there are 30-40
> millions cbers in this country.

A simple look at rooftops will support this claim. And you can
disprove it how?

In fact I can use your analogy, prove that
> there arent. Can you prove there are more hams than truckers in here? Prove
> that statement.

So run your poll, Georgie-girl. So far, I have no need to prove there
are more truckers than hams here. Let's see: N3CVJ (Dave Hall), N8WWM
(Doggie Adiar), KC8LDO (Leland C. Scott), WA3MOJ (Georgie-girl Busch),
AB8MQ (Roger L. Wiseman), K8CPA (Charles Adkins), did I miss anyone?
And you can identify all the truckers?

I'm waiting to see the results of your Poll, Georgie-girl. Please
hurry it; I haven't got a lot of time.

Why would I drive all the way to VA Beach to do that? I'm nowhere near
Virginia Beach. You can believe whatever you like, Aanal Aaron. BTW,
what's the callsign? What equipment do you use? Like you're ever going
to answer simple questions like that! HAR de HAR!!!

Riley doesn't have the funding to visit too many truckstops. It's
quite normal for a few to get "hit" every year. So what?

That may actually be true, Steve. I have no way of knowing. The address on your current ham license record need not be updated until the next renewal. That means you could have moved anywhere, yet would retain the VA Beach address in the QRZ records for KD4CXJ for quite some time.

>You can believe whatever you like, Aanal Aaron.
(trolling snipped)

So is your pirate SW station going to be on the air this weekend? Maybe you could do a "rant" about why truck stops must continue selling phoney 10 meter ham gear.... ;)

-Aaron-

>Sometimes they do. Sometimes the CBers "police" their own, too.

True, occasionally I'll DF a really nasty amp-jockey, and as soon as
he realizes that he's being DF'ed he'll shut up. But that's about the
extent of it.

<snip>
>And the ARRL can claim less than 25% of licensed US hams as members.
>They are nothing but a Corporate lobbying group; they do not represent
>what is best for amateur radio, they do not represent you or me. They
>may have clout but only because they have $$.

Now I may not be a ham, but that's pure bunk. The ARRL provides a
foundation for amateur radio simply by representing so many hams. It
also has done quite a bit to help out beginning amateurs simply by
publishing all kinds of excellent material. It does a lot more, and
you should log onto their website once in a while.

<snip>

>do things, IMHO.

The NTSB has determined that the frequency of traffic accidents are
directly related to population density (among other things). Montana
has very few accidents because it has a low population density -- very
few people per square mile, and therefore very little traffic.

I have a T-shirt that has a big black square on it with the caption:
"Libby Nightlife".

>
>You miss my point, too: Why are those licensed hams advocating illegal
>activity on CB? Would you encourage people to mess up your own band?

I will hazard a guess here: Most of the hams I see that encourage
illegal use of the CB, freeband, and other portions of HF, are
no-codes. My guess is that they are too lazy to learn Morse at the
snails-pace of 5wpm, and they would rather operate illegally than
exercise a few brain cells. Personally, I think it's easier to learn
CW starting at a pace faster than 5wpm, maybe closer to 12 or 15wpm.
I'm doing a solid 18wpm now, but my problem is in the band allocations
and skip propogation. So I have a bit of studying to do before I go
for the test.

<snip>

Did you ever stop to think that a CB forum would be a good place for
informing these "truckers" that their modified CB's will encroach on
amateur bands? Probably not.

>Georgie-girl) aren't likely to have any impact on it. The FCC "busts"
>a couple of those shops every once in a while, and more pop up to take
>their place. The best way for the hams to defend their turf is by
>USING it and, maybe, running the "intruders" out.

I am confusing nothing. Yes, there are legitimate 10M radios on the
market, and there are radios that are not legal for operation in the
US (but somehow end up here anyway). But 10M radios that are designed
to operate on the CB my removing just one jumper or snipping just one
wire is simply a lame attempt to sell illegal radios legally through a
technicality. Fortunately, the FCC has enough brains to see through
this weak smoke-and-mirrors act. Do you?

<snip>
>I haven't seen any mis-information from Tim so far.

>> <snip>
>> >Who's Phil Covington? Never saw him post here.
>>
>> Just wait a while, he'll be back.
>
>So you mentioned his name for no reason. Are you trying to draw him
>out?

Phil has been responsible for spreading many rumors about people in
this newsgroup, especially about Voobner and myself. You claimed to
have a 'source' of information on Voobner, and my first suspicion is
Phil. So I did not mention his name for no reason.

>> <snip>
>> >> > but who appointed you (or anyone else) NetCop? People are
>> >> >free to post For Sale ads for anything they want to post;
>> >>
>> >> Not if it's an amplifier capable of operating on the CB. Or haven't

>> >> the proper information showing you where you are wrong.
>
>Obviously I've been reading his posts; how do you think I can correct
>him all the time?

Well then, I'll provide you with the same info that he has posted in
the past:

"
Sec. 2.815 External radio frequency power amplifiers.
....
(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including **ADVERTISING** for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency

or frequencies between 24 and 35 MHz.
....
" [emphasis added]

And here's the link in case you want to read the whole thing:

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=2&SECTION=815&YEAR=2000&
TYPE=TEXT

Now correct me if I'm wrong, but ADVERTISING a CB amp is illegal. Now
remember, Voobner has posted this many times before. So if you are
saying that Voober was lying about that, then you are saying the Code
of Federal Regulations is a lie. Care to point out where the CFR is
lying?

>> >Of course they can. It's as easy as typing an ad for legal stuff. If
>> >you don't like to read them, use your filters and don't look at them.
>> >Funny how everyone else can filter and use kill-files but you don't.
>>
>> There is a distinction between legal and illegal behavior, or can't
>> you make that distinction? Just -advertising- an RF amplifier capable
>> of operating on the CB is a federal offense.
>
>Nonsense; amps are permitted for ten and twelve meters. You really
>mean: "Just -advertising- a RF amplifier in rec.radio.cb..." maybe?
>Geez, I think it makes perfect sense considering how many allaged hams
>lurk here. Maybe they would like to buy them?

Amps under 2.815 are legal to own or build from scratch, but they
can't be manufactured or sold any more. The exception to that is if
the amp is sold:

"by a licensed amateur radio operator to another licensed amateur
radio operator of an external radio frequency power amplifier
fabricated in not more than one unit of the same model in a calendar
year by that operator provided the amplifier is for the amateur
operator's personal use at his licensed amateur radio station and the
requirements of Secs. 97.315 and 97.317 of this chapter are met."

If you think you can find an advertisement on this newsgroup which
fits that criteria, then by all means post it.

>> >And I highly doubt Aanal Aaron can provide anyone with "proper
>> >information". He never has and he most likely never will. He might
>> >provide HIS take on something, but it won't be the truth.
>>
>> The Code of Federal Regulations isn't the truth? Well, maybe you can
>> point out a few of it's lies.
>
>I have pointed out many of his mis-interpretations of the R&R. As I
>said, he presents his distorted version of the Rules, not the truth.
>Try reading his crap sometime.

I have and I do. Those are not his interpretations -- he is just
repeating the interpretations of the CFR by the FCC. It's all on the
FCC website. Try visiting that one once in a while, too.

<snip>
>> >...i dont see jerry, aaron, frank or

>compact those things into the (relatively) small cases (for the day).
>I haven't seen one for a good many years, so I could be wrong. Maybe
>that was later, under SilTronics?

Well, this radio uses the same VCO for both transmit and recieve, but
I would hardly call that a "gimmick". In fact I would call that an
advantage, since you are assured that TX and RX are going to be on the
same freq. And for a tube radio in 1967, it's not exactly "compact".
It's quite heavy, and so is the power supply. And the only thing I
know about Sillytronix is that Dick said they suck. That's enough for
me.

<snip>

>not a breath of breeze today, so no kite.

I built the kite, but not enough wind to get it aloft. I gave it one
hell of a try, though. But you should have seen some of the funny
looks I got -- a middle-aged fat man (well, not that fat) running
around the park trying to fly a kite! They must have thought I was
crazy. I think I'll try again when there's more wind (but I'm bringing
the oxygen tank with me next time!)

Your are just as subject to a search of you cb station as any ham.
Suggest you become familiar with part 95 of the FCC regs. Maybe
you can't find the regs just like you can't seem to find 10
meters.

6264. Rabbit Ears Gets 15 Months In Jail For Annoying Hams

Newsgroup: rec.radio.cb
Date: 2002-08-31 23:17:46 UTC
From: netmanager2@yahoo.com
Message-ID: <78f1f2d5.0208311517.1269c812@posting.google.com>
Source record: 135343

NEWINGTON, CT, Aug 29, 2002--Florida Citizens Band enthusiast William "Rabbit Ears" Flippo will spend the next 15 months in federal prison and have to pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license. Flippo was convicted in federal court earlier this year on eight misdemeanor counts. The sentence is believed to be a record for convictions of this type.

Federal District Court Judge Daniel T.K. Hurley imposed the sentence August 29 on Flippo, of Jupiter. He had been found guilty June 19 of four counts of operating without a license and four counts of deliberate and malicious interference. Flippo has remained in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing. It's not clear if he will get credit for time already served. The judge also said he wants a full financial disclosure from Flippo, who may face other legal actions unrelated to his radio operation convictions.

At the sentencing, Flippo reportedly wept, said he'd turned over a new leaf and claimed he was sole support for his wife and two daughters. None of his family members was in the courtroom for the sentencing, however.

The judge was not persuaded, telling Flippo, 60, that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury during the course of Flippo's testimony during his June trial, which ran six-and-one-half days. The jury took about a half hour to determine that he was guilty on all counts.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. Following up on the amateurs' complaints, personnel from the FCC's Tampa District Office visited the Jupiter area at least twice in 1999 and reported tracking the offending signals to Flippo's residence.

Flippo had faced a maximum of eight years in prison--one year on each count--and up to $80,000 in fines. Available opinions were mixed on whether the sentence Hurley imposed was appropriate. Ed Petzolt, K1LNC, who assisted the FCC in gathering evidence and, at one point, had his car rammed by Flippo's vehicle, said he felt Flippo should have received at least three years.

"I thought it was a slap on the wrist," said Petzolt, the 1999 ARRL International Humanitarian Award winner who also testified at the trial. John Criteser Jr, KC4JLY, agreed. "I think he should have gotten more--at least five years," Criteser said outside the courthouse. Other amateurs who attended the sentencing session, including Jupiter-Tequesta club member Bert Moreschi, AG4BV, were satisfied with the penalty, however.

Flippo requested that he be incarcerated at Florida's Eglund Air Force Base, but the decision on where he'll spend his sentence is up to the Federal Bureau of Prisons.

Flippo's federal trial was twice postponed last year after he argued successfully that serious health problems would prevent him from participating. He was unsuccessful, however, when he tried the same tactic during a hearing earlier this year to determine if he was capable of standing trial.

Last year, Flippo was convicted in state court of criminal mischief--also a misdemeanor--after ramming Petzolt's vehicle. He was sentenced to a year's probation and ordered him to dispose of any radio equipment in his possession. A ban on possessing radio gear also had a condition of his federal bond, which Hurley subsequently revoked during the trial.

Federal authorities arrested Flippo in July 2000. The criminal charges of which he now stands convicted covered violations allegedly committed between June 1999 and April of 2000. The defendant already faces a $20,000 fine levied in 1999 for unlicensed operation, willful and malicious interference to Amateur Radio communications, and failure to let the FCC inspect his radio equipment.

Hurley ordered Flippo immediately back into custody to start serving his sentence. Flippo reportedly was led into and out of the courtroom in shackles and leg irons.

Pings don't mean a thing. And I don't lie nearly as much as you think
I do, Georgie-girl!

That's what I heard about Aanal Aaron, too! Thanks for confirming
that.

What's a "techican", Georgie-girl? And I'm not in VA Beach, dolt. I
thought you Pinged me to Rochester?
